You'll have to excuse Leonard on this one, Dan. He isn't actually a particpant in amateur radio. He haunts the newsgroup because he's a wanna be.

Habitat for humanity walk
Multiple Sclerosis bike race
4H Horse events
March of Dimes walk/bike a thon

I've done these ever since getting involved in the ARS.

Just getting involved in Skywarn

I've enjoyed all of them. Don't know why more hams don't help their
communities.

>I have a copy of the Extra Class study guide. Hate to sound like WA8ULX, but
>the Extra Class is question pool format, and can be learned in a day.

Why, because you hate to admit the truth about HamTesting. Testing now is a JOKE, and when the 5 WPM goes, it will be a BIGGER JOKE. The real Question that needs to be answered at this point, is why even have TESTING. The present written proves nothing. So why even force someone to memorize stuff that they dont understand, or will ever use.

The place where I spent a great deal of my in country time was very
close to that spelling. It was not, however, spelled that way. By
Len's own standard, it was not close enough.

> > Fact: Len wrote of my moving boxes at a supply depot.

That one seems to be a non-fact. Did you assume that I was going to let
you slide on it? If Len uses his standards on me, they should be good
enough for him.

> > > And you wrote of a snack bar. Now you deny it.

Although the Paul Harvey story is not "big media", Ham radio got the "big media" story today.

There was a significant story on amateur radio today. On WNPR public radio, they had a half-hour story on Ham radio. They mentioned making contacts, mobile operations, Hams helping with Columbia disaster.

This half-hour story, on Ham radio, by a credible news organization, was surely heard by many.

SB QST @ ARL $ARLB031
ARLB031 FCC Now Accepting Comments in "Broadband Over Power Line"
Inquiry

ZCZC AG31
QST de W1AW
ARRL Bulletin 31 ARLB031
>From ARRL Headquarters
Newington CT April 30, 2003
To all radio amateurs

SB QST ARL ARLB031
ARLB031 FCC Now Accepting Comments in ''Broadband Over Power
Line''Inquiry

The FCC released its Notice of Inquiry (NOI) on the deployment of
''Broadband over Power Line'' (BPL) technology on April 28 and now is
accepting comments. A form of carrier-current communication better
known as power line carrier (PLC), the technology has raised
concerns of substantial interference to the Amateur Radio HF bands.

BPL would couple high-frequency RF to parts of the power grid and
use existing power lines as the transmission medium to deliver
broadband and Internet access. In the NOI, the FCC acknowledges the
interference risk from BPL.

ARRL Lab Manager and RFI guru Ed Hare, W1RFI, has cautioned that
deployment of BPL could affect every amateur in communities where
it's employed with a significant increase in noise levels. More
information is on the Web at www.arrl.org/tis/info/HTML/plc/.

The complete NOI is available on the FCC Web site. The FCC now is
accepting electronically filed comments via its Electronic Comment
Filing System ECFS Express page. To initiate a comment, click next
to ''Broadband over the traditional telephone network.''

>
>
> If yes, why?
>
> If no, why?

No. Making the band plans a regulation would not be a good idea. Here's
why.
1) No flexibility to adjust to the communications needs on a real time
basis. Say you like HF SSTV and the frequency is not available (i.e. in use)
during any time you might have available to work this mode. Right now you
can simply move to an unused portion of the band.
2) Inhibits the development of and the use of new modes. Before a new mode
is conceived there is no reason to plan for it.
3) How would QRP and non-QRP stations communicate with each other if each
had to stick to their own portion of the band? It could lead to way too
much split frequency operation which in turn ties up to much of the band.

No doubt one could think of other drawbacks.

None yet. I had designed circuits, but none of these could be considered contributions. Probably never, now that I am not in the EE field.

It would be interesting to hear about lenover21's contributions. Then someone might jump in and claim these are not "amateur" radio contributions.

I don't see what you mean. The "license in a day class" teaches you to
memorized the questions and answers, not the material.

The Extra test looks like the same number of questions as Technician license.
Many including non-EE children pass the Technician class license in a day.

The material for the Extra may be harder, IF one actually learned it. If not,
it looks like the Extra test is actually easier than the Technician if one just
memorizes the question pool.

Nobody said it had to be English. One can copy code without knowing the
language. Afterall military and commericial operators used to have to be
able to do 20wpm of random characters. No specific language at all.

Dee you dont have to memorize every Question, all you need to do is a few word associations, and a few memory tricks and its done. Dont believe it, it has been posted here by many that thats exactly what they did.

I hate to agree with you, but you are right on. I took the EXTRA Test and it
was easier than I expected. Alot easier than the Novice I took years ago.
Actually the Extra was a joke as far as tests go.

And the cute part is ARRL will not be able to stop it. The people who want this have HUGH DEEP POCKETS of MONEY, and there going to get there way. The general Population want High Speed Access, and this new system will be able to provide it at an affordable price. I hope no one is stupid enough to believe that the Millions of people in this country, are going to let a bunch of Hams, dictate to them that they cant have this because the Hams might get some Interference.

>

Well, my call used to belong to someone somewheres in upstate New York.
The FCC was recycling calls back in 1976 when I got my first license.
Had to go to an FCC field office in NYC to take the tech (general
written and 5wpm receive AND send). Since restructuring I figured
I might as well get the extra.

I've heard that Japan's FCC literally ran out of ham calls, and recycles
them within a few weeks of expiration/death. They have a much
smaller letter/number space to work with than USA has.

>covers phase angles. The Technician test does not.

So what, you dont have to know anything about Phase Angles to pass the Test. Tell you what im going to do, I will find me one of them sites that have the test on, I will copy a couple of the Questions and I will show you how its done.
If you know where I can find one of the sites let me know.

> memorized the questions and answers, not the material.

Almost everyone who has been successful in the license in a day class has done some prior reading of the study guide. The classes that I have heard of specifically recommend that the people planning on attending the class do so. Also I've only heard of this being done for the Techinician license.

>
> The Extra test looks like the same number of questions as Technician
license.

The Technician test is 35 questions chosen from a pool of 384 possible questions. The Extra exam is 50 questions chosen from a pool of 665 possible questions. There is also a major difference in the difficulty level of the material. Again I know of no one who can memorize 384 or 665 questions plus answers in one day.

> Many including non-EE children pass the Technician class license in a day.

See above. Those who are successful have done some study prior to the class.

> The material for the Extra may be harder, IF one actually learned it. If
not,
> it looks like the Extra test is actually easier than the Technician if one
just
> memorizes the question pool.

I don't know what pools you are looking at but you are wrong. The extra is more difficult. Just a single example should suffice. The Extra test covers phase angles. The Technician test does not. Plus the Extra is harder because they are drawing from a substantially larger question pool.

The Tech pool is 384 questions. I simply can't believe that it can be done in a single day without some prior preparation. Those that I have known who succeeded had done some advance preparation as recommended by the sponsors of the one day class.

It's even more unbelievable when it's the Extra class as the pool is 665 questions.

Besides that, there is often a big discrepancy between what people claim to have done and what they actually did. One person who claimed to have passed "without studying" actually had done significant study. He just hadn't happened to use the published study guides. He had a background in electronics and communications and read the FCC rules pertaining to amateur radio. Therefore he did not need to use the published study guides but he had certainly studied the material. It just happened to be a different study approach than most people take.

Any test is easy if you know the material. If you are like most of us, your first test is taken at a point in your life when you have little background in the subject. Thus even though you've studied it, it is still difficult as the whole field is new to a person. By the time you get to that Extra, you've accumulated a lot of experience and knowledge making it seem easier even when it is not.

> Actually the Extra was a joke as far as tests go.

Also when did you take the Extra test? There was a small window due to restructuring when people could take the Extra test that would normally have followed the Advanced test (the hardest of the whole lot) without having to take the Advanced test. However in 2002, the Extra test was revised to include the material of the old Advanced testing. So between the restructuring and the implementation of the new Extra question pool in mid 2002, the route from General to Extra was easier than before or after that window. That's because the Extra test before restructuring focused a lot on regulations including VE requirements and responsibilities since the "heavy" technical material had been in the Advanced test. The discrepancy created by the restructuring was corrected with the release of that new pool in 2002.

Or.... 1 or 2 letter characters before a number representing the order of which state became a state and then 2 or 3 letter characters after that number?

For example, my call KC8PMX might be KC36PMX if Michigan was the 36th state to join the "union."

Don't worry... not serious about that, but it is some food for thought.....

>No....it is not like it was in 1912. From what I understand those folks
>were actually improving the state of the art.

Using solder to connect wires was "improving the state of the art"
in the primitive early days of radio. :-)

On-off keying was the overwhelming choice of communications
modes in 1912. There wasn't much choice at all back then.
Vacuum tubes were too new, too expensive, and extremely few
radio amateurs had rotary VLF generators to hook water-cooled
microphones to use early AM. On-off keying was king because
that was about the ONLY choice available.

90 years later a whole glob of hams keep pushing this "code"
stuff like it is the ultimate achievement in "improving the radio
art." :-)

>Now they are trashing the ham bands.

Who are "they," mister morseman? :-)

Did you forget your mental mood pills again?

>Microprocessor crystals are available in quantity for low prices. If a

>filter is intended for use in a receiver, it can be tested in the
>receiver and a simple fixed-frequency signal source used.

How many of those "microprocessor crystals" were available in
1970 or 1975? Were they cheap then? :-)

"Microprocessor crystals" are cheap now (just like NTSC and PAL
color burst quartz crystals)...but only because microprocessors
are plentiful and in wide use.

You've used hundreds of microprocessors, right? You have
fabricated many, many in your homedesigned projects, yes?
Of course you have, you are so "with the times!"

>If you don't have hardware, it's just an academic exercise.

How about a couple spare 16C84s from Microchip? You must
have dozens lying around staying "with the times." :-)

>> Try to stay focussed on the SUBJECT.
>
>Try a spellchecker ;-)

Any dictionary allows spelling of "focused" or "focussed" as
correct. Don't try to misdirect.

>> No, you apparently don't know.
>
>Yes, I do. You hate to admit that, however.

Know what? So far all you've mumbled in here is "you know"
all these things and have this ivy-covered MSEE certificate
and "work as an electrical engineer."

You can't do the simple math of the QEX Yoshida article yet
"you know" all those things simply by stating that.

>> Relatively easy to observe with the right test equipment. I have
>> the test equipment, the experience.
>
>But you haven't done it, have you?

Yes I have.

>Have any of these pahsing receivers exceeded 45 dB unwanted sideband
>rejection? 50 dB?

Would you mind taking your own spellchecker to task on the
word "pahsing?" Thank you.

Yes and yes to your questions.

As to how much exceedance, "you don't have the right to know!"
:-)

>> I don't "lecture endlessly." :-)
>
>Yes, you do.

Poor Jimmie, into delusions again. He knows everything so
anyone telling him something new is labelled "lecturing." :-)

>> >No, I want to actually BUILD something and put it on the air.

>> You should be able to
>> do that by yourself without help from others.
>>
>I have done it. Many times. Doesn't mean I have to reinvent the wheel,
>though.

How many HF "rigs" now...8? And you want to "actually BUILD
more?"

Buy another KIT, Jimmie, that won't tax your poor overworked
"wheel," er, brain. Build away.

>> Elecraft has some other products in kit form, several other
>> manufacturers do, too. Those would allow you to "build"
>> something and get it on the air.
>
>Been there, done that.

You've bought the entire Elecraft product line in kits? Amazing!

Yet you want to "BUILD" some more...tsk, tsk, tsk.

>But you haven't actually built any phasing-type HF SSB receivers that
>exceed 50 dB unwanted sideband rejection, have you?

Yes I have.

>But it can be done, and has been done, with crystal filters.

Yes it has.

>The truth hurts, doesn't it?

Not to me.

>Seems to me that you are the one emotionally linked, though.

Linked to what?

I'm not the one defending the Great Cult of Morse. :-)

>But you don't behave in an objective manner here.

I don't follow the Teachings of the Church of St. Hiram, therefore
I don't behave in a subjective manner like that of a Believer.

Yu gotta prolem wid dat. TS.

>You remind us of your CV at every opportunity.

Nope. :-) I'm not the one with the ivy-covered MS.

Is "CV" short for curriculum vitae? That refers to a whole life
experience. I gave a very short form of my job resume some
time ago in here.

>Because wideband SSB may be a good idea. Or it may be a bad idea.

Make up your mind.

>The law may be stifling innovation. Maybe it should be changed.

What "law?" ITU-R S25 isn't any "law."

Try to stay focussed. Tsk, tsk, tsk. Remember you have an
MS...you've repeated that more than once a month in here. :-)

>> So, tell us all about how you "homedesigned" that Elecraft K2?
>
>I have never claimed that.

No? Tsk, tsk, tsk...you are getting confused operating those 8
great HF "rigs" all at once. :-) Or is it 7? How many were kits?

>Can you show us a post where I claimed to have done so? I don't think
>you can. Which makes you either a liar or mistaken.
>
>Which is it?

A different option, Judge Judy. Get a better attorney or agent,
whichever is best. :-)

43. Re: D.I.Y. "Hi-Fi" SSB links

Newsgroup: rec.radio.amateur.policy

In article <c2356669.0304300902.6a00a8fd@posting.google.com>, N2EY@AOL.COM (N2EY) writes:

Continuing a bit of Jimmie's "critique" of others without acknowledging a single fault of his own...

>> Can anyone understand geographic bias on your
>> part? [of course they can]
>
>You often see things that are not there. Len. You've repeatedly
>written things about others' posts which you have failed to prove.

Go back to Google and look at your own postings about the B&W network, where it was made, and so forth. That's just one example. There are others.

>> Concentrate on the analysis done by Yoshida in the QEX article.
>
>Why? You are not empowered to give orders.

You are the one with MSEE and have mentioned it often. Can't you do an analysis of the math? I thought you were this high-powered "real engineer" who does that at work.

>> Note: Wideband performance is part and parcel of possible
>> "Hi-Fi" SSB, aka wide audio modulation in radio.
>
>6 kHz is not "hi-fi" (an ancient '50s term) by any stretch of the
>imagination.

I wasn't restricting bandwidth to just 6 KHz (and certainly not "kHz"). The Gingell polyphase network can do wider bandwidth SSB. It is technically possible.

>> One of the Gang of Four has already stated in here that he "will
>> live forever."
>
>Who are "the Gang of Four"?
>
>I never claimed to be immortal.

Steamy Stalker did that in saying he would "live forever." :-)

That will be in Google too. :-)

>> That's evidentiary in a search of Google, is it not?
>
>Show us.

Go look for yourself. I can't do your homework for you. Google
is pretty much open-access to anyone with Internet access.

>> Then try to discuss the contents of Yoshida's QEX article, not his
>> apparent lack of QRZ listing.
>
>Why?

The mathematics is important by itself. That doesn't die with the
mathematician. Or have you changed your mind about that
non-relationship?

>You have built phasing-type SSB receivers and transceivers?

Yes.

>Did any of them exceed 45 dB unwanted sideband rejection? 50 dB?

Yes.

>> You want "proof" of that? :-) Go to the RSGB's Radio Communication
>> issue almost a year after the 1970s mention and look in Pat Hawker's
>> "Technical Topics" column.
>
>Why? Did any of them exceed 45 dB unwanted sideband rejection? 50 dB?

Not then. Came a lot closer than was possible with the Dome
network.

>I just asked some questions. You don't want to answer them.

I answered them. You didn't like the answers. Too bad.

>Perhaps
>you don't want to admit that those old designs did not do better than
>newer designs such as the KK7B R2.

Not having any hands-on experience with a "KK7B R2" (whatever
that is), I can't do any comparison. Is that one of the Elecraft
things you always mention? :-)

>Perhaps you don;t want to admit
>that parts and boards for those old designs are as hard to come by as
>the old B&W PSN network....

You need someone to layout parts for you and make PCBs? :-)

Tsk, tsk, tsk. One-of-a-kind PCBs are easy to layout. Just
think in two dimensions. You can do it with 0.1 inch centers
full size using a vellum pad. Hand-paint resist (lacquer) after
drilling through-holes drilled with locations from the full-size
layout sheet. Etch in a small flat photo darkroom plastic
tray. Easy. I've done that about three dozens of times. No
fancy photo work needed, no pre-sensitized PCB stock..

Need a layout for a Gingell polyphase filter and modulator
circuit for an SSB exciter? Go to Harry's Homebrew website
(SM0VPO) and download a free GIF full-size pattern. All
ready to go. Schematic and all instructions there, too, mister
MSEE. Gosh, with all your claimed "electrical engineer"
experience at work, I thought you would know such things.

I guess not. Tsk, tsk.

>> [on the Tayloe Mixer...]
>> >Yet for some reason you did not include his callsign in your post.
>> >You included the callsign of everyone else mentioned. Perhaps you
>> >do not like to admit that the inventor is a 1x2 Extra.
>>
>> Misdirection on your part again, Jimmie. Tsk, tsk, tsk.
>
>Then WHY did you omit his callsign and include everyone else's?
>
>> Dan Tayloe wasn't born with his amateur radio callsign, was he?
>
>Nope. Neither were any of the other people you mentioned. But you
>omitted his callsign and included all the others.

Awwwww. Now ain't that such a badness!

Do you have a need to spank someone, Miss Manners?

>> The elegant innovation/invention of the Tayloe Mixer is applicable
>> to ANY radio-electronics situation involving heterodyning, not just
>> amateur radio. Dan Tayloe has much to his credit in invention
>> and innovation and much of that work is not just for ham radio.
>
>Nobody disputes that.

But you just LOVE to do all that "disputing" about some alleged
social gaffe about a callsign. You don't even read RF Design
magazine you could get free every month while "working as an
electrical engineer."

Neither the US Patent Office nor RF Design magazine identifies
the Tayloe Mixer by amateur callsign.

>But the FACT is that the first practical use of that innovation was in
>a high performance, CW-only, direct-conversion amateur radio
>transceiver.
>
>That fact really seems to bother you.

Not me. I'm not the one making all that fuss about an amateur
radio callsign. :-)

>> Try recognizing the PERSON, not the callsign, Jimmie.
>
>I recognize both. You suppress the callsign, even in an amateur radio

>newsgroup.

Callsigns don't write messages, Jimmie. PEOPLE write
messages.

>> I think I'm right in my assessment of you and your "qualifications."
>
>No, you're completely wrong. But you will never admit it, no matter
>what qualifications are presented. You've already demonstrated that
>behavior in here many times.

You mean I don't fall down and worship a god of radio that has an
amateur radio license grant?

Horrors! An infidel! Not one of the True Faith of Morse! :-)

Better call OHSA, have them send a hazmat team to investigate
your "electrical engineering" workplace. You might be inhaling
something very strange.

>This is an amateur radio newsgroup. In amateur radio, identification
>is primarily by callsign. Callsigns are unique, names are not. First
>names are
>used rather than last names in conversations and correspondence.

Oh, oh, the Miss Manners identity came out again! Quick, call
the shrinks.

Gosh, Jimmie, my little old Icom receiver isn't picking up this
newsgroup on HF ham bands.

>This simple convention really seems to bother you, Len. You want to impose
>your convention of last names and invented nicknames on others, rather than
>callsigns.

Awwwww.

Why do you even bother to make these long, Long, LONG replies to
a non-ham, Jimmie? :-)

You should be out there complaining to the Usenet gods, demanding
that infidels be BARRED from entry! These are Holy Ham Habitats!

You seem ultra-bothered by some words on a screen. Not good for
your psychological health to get so worked up. Remember Jim Fixx.

>
>I'm replying to the newsgroup.
>Specifically, to a newsgroup posting.

Tsk, tsk, tsk, you are very specifically targeting one individual.

If you were "replying to the newsgroup" the Reply To line should
have said something like "everyone" or "all" or non-specific
mention.

>> You live in the past too much.
>
>I'm not the one repeatedly citing his expired patents and
>half-century-old RTTY experience, Len - you are.

Tsk, tsk, tsk some more.

I actually GOT all that RTTY experience and GOT one patent.

The patent is in radio, by the way, not some mechanical thing.

Who is it that kept on with long, long posts about the "history"
of amateur radio regulations before 1955? Jimmie Miccolis did.

Lots of those. They are in Google.

>> Not only that, your resources
>> of information are too tightly bound to old ARRL publications.
>
>Says who?

Says I. You might mention a few things out of "Electric Radio"
(a non-newstand publication commonly called a "fanzine") but
your referfences are almost exclusively from ARRL publications.

You seem to ignore the RSGB and Radio Communications or
anything published in Australia or New Zealand...or the few ham
publications from Europe that get translated into English.

You are an ARRL syncophant. Rather transparent. Google
shows that.

>Do I sense some anti-ARRL bias in your postings?

You limit your personal information resources to just the ARRL.

>> There HAVE been "new" networks publicized for a quarter
>> century. RSGB publications has had them repeatedly.
>
>If they've been around for over a quareter century, they're not new.

But YOU don't know much about the Gingell polyphase network
so you try to cover that up with a lot of side-stepping and
misdirection.

>> "Recognized and published here" some 13 years after it appeared
>> in RSGB's Radio Communication magazine. :-)
>
>The 1988 Handbook reference I gave was not the first one. Just one I
>had handy.

Side-step, side-step, tipitty tapping. :-)

See? MUST have that ARRL reference! :-)

>> European amateurs were already trying out and (successfully)
>> using the Gingell polyphase network in SSB equipment before
>> it was "recognized and published" in the USA.
>
>That's nice. Nobody denies that.

But you need those ARRL cites just the same. You won't really
accept it unless ARRL publishes it as "proof." :-)

>You're wrong about that.

About what?

>> You keep promoting some old component manufactured
>> by a Pennsylvania company long ago...as if it were the final word on
>> state of the art.
>
>Where have I done that? Mentioning is not promoting. I used to have
>one of those networks, but sold it long ago.

You were PROMOTING it awhile back. That's in Google, too.

That came with a lot of boosterism for your local Pennsy "hood."

>And the Gingell network is hardly the "final word on state of the
>art".

A four-quadrature phase shift network by Gingell and finalized
in values by Yoshida is a LARGE JUMP over the Dome two-
quadrature network limited to just voice bandwidths. The Gingell
and Yoshida-value network is considerably more broadband than
previous attempts...and holds to much lower relative quadrature
error which improves unwanted sideband and carrier rejection.

The original thread opened with a discussion of whether or not
"high-fidelity" (presumably meaning wideband audio) SSB was
good for amateur applications.

I posted mentions of the 4-phase Gingell network to explain that
it was TECHNICALLY POSSIBLE to generate "Hi-Fi" SSB. It is
very technically possible with relatively loose-tolerance
components in the circuits and still good for unwanted sideband
and carrier rejection.

You jumped in with these long, Long, LONG "critiques" of my
post talking about OLD networks and concepts which could
NOT do wideband audio SSB. You've just not had that much
experience anywhere with the newer networks, won't do the
math to do an honest comparison. Don't try that "MSEE snow
job" again about "knowing better." You haven't shown anything
of newer techniques, only new snow.

You seem bent on acquiring many more pounds of flesh.

I might or might not handle all your "critique" in other replies.
That might ease the eyestrain for readers in here. :-)

Meanwhile, you really ought to use your free time more productively
than going into these long, Long, LONG postings. I'd suggest you
do some DX on HF with CW. It might make you feel better. :-)

>nothing more.

Tsk, tsk, tsk. Just who claimed "26 patents" in here? :-)

Kellie did. Poor guy kept trying that snow job for several days until a few of us checked out patent sites such as Delphion.

Turned out Kellie was co-inventor of just ONE patent. That one wasn't on radio or electronics. He retracted several days later by claiming "foreign applications" increased the number to 26.

Who hopped up and down insisting that US military vehicles in World War 2 used "28 Volt ignition systems" that could "power ARC-5 radios" directly? Kellie did. :-)

Several more exchanges and about two weeks later Kellie was still claiming that he was right...even though it's an old archived fact that most US military land vehicles used 6 VDC systems with a few later war models going up to 12 VDC. The 28 VDC system was common on US military aircraft before WW2.

"ARC-5" sets were designed for aircraft use. The US military had plenty of other land-vehicle-mounted radio systems. Most became surplus after WW2.

Then we get into the Tall Tales of Kellie shooting bears from the deck of an aircraft carrier for USN intelligence as a civilian working on catapults. Priceless! :-) :-) :-)

>I hope you learned your lesson about how far being polite to him gets
>you.

Yes, of course, all have seen how "polite" Kellie gets. :-)

It's either the hoagies or the soft pretzels with yellow mustard as
the cause of it in my opinion... :-)

>

Maybe they should start reissuing those calls that are listed as "available"
for vanity calls. There is a vanity call page linked to QRZ.COM that lists
thousands of calls available now. Maybe they should reissue those BEFORE
issuing any more sequentially issued callsigns?

> >
> >

> privileges
> > allowed by the license that makes the difference.
>
> You have been brainwashed by Incentive Licensing. The class is the thing.
> Bull crap.

No I haven't. It's no different that the licenses or certifications I do
currently hold. I respect and am proud of the priviliges and opportunities
and the things I am allowed to do with those certifications and licenses I
hold (outside of amatuer radio) The registration numbers on those are no
different than the callsign. Its the privileges/rights/responsibilities I
have earned that I respect and am proud of.

>
> The callsign of a person is like his name. Unique to that person alone.
> But alas in the great wisdom of the great FCC all that is trashed too.

Simply nothing more than symbolism and a form of registration of the masses
(masses in ham radio that is.)

>
> Lets go buy a dead mans call.

If the concept of never reissuing a call after a person has passed came to be, we would run out of calls eventually.... If that is your wish to do so.... feel free though.

Is this guy a *real* dumshit or what? He insists that the amateur radio press report in intimate detail on the workings of all other radio venues. Weird, at least.
"Journalism" indeed. Evidently his wife is a journalism professor this week. Last week he couldn't spell it right.

Ah well, What should anyone expect from a uninvolved troll whose only interest in life is in attempting to relieve his terminal boredom by trying (most unsuccessfully)
to trash a hobby he has long held in envy but could never join?

If the code is the real issue, and is supposed to be "all-important" to ham
radio, then a system like that may support incentives to upgrade.

5 wpm is not a hard thing to achieve.... Just let yet another CSCE expire
and going to re-test again in June to get another one to sit on a shelf for
another year until I am in a position to enjoy the privleges that will allow
me to enjoy, that I currently cannot enjoy right now....

>

Yeah, it's called the No-code tech license currently available right now.
All amateur privileges from 50Mhz on up, all modes applicable to the bands
according to FCC rules or gentlemens' agreements.

If someone can memorize both the questions and answers for the complete test pool for the extra class, I think that is definitely an achievement in my book. That means word-for-word memorization.. Isn't that like something over 300+ questions???

>

Actually, I would love to see another group step up to the proverbial plate.
A little bit of competition would be good to see the complacency change.
Instead of having the "We can do whatever we want" attitude currently held,
competition may actually make the ARRL accountable. After all, there is
more than one political party in the US, as well as there are more than just
ONE union (labor type) organization out there, and those are both groups
that are allegedly suppose to be representing thier respective groups.

> Things like band threats are real.
>

Yeah... due to lack of use.. Over 20,000Mhz of frequencies to use above
50Mhz and I bet less than .01% are actually being at least moderately used,
let alone heavily used.....

Most likely since there are many other forms of emergency communications out
there. Most emergencies are "localized" in nature, and in-state
communications seem to be the majority.

I suspect the FCC already considers that to some extent. However, I doubt anyone would give that consideration a specific weight. ARRL is the largest ham radio organization in the country. That alone makes their position on an issue worthy of serious notice and consideration.

Even as an ARRL member, I'm not totally convinced of that. I'm not even convinced ARRL always fully represents their own members.

> ARRL acts for Hams when the Hams themselves are
> unable to. The other 75% are an unorganized group.
> Acting on their own, the other 75% will not be as

I would really like to see an alternative to the ARRL. Clearly, one organization cannot fully represent the diverse views of an entire population group. Furthermore, a second organization might strengthen our representation. For example, when the two agree, having a second organization back your position always strengthens that position. But, where hams disagree, they should have an alternative organization to represent their views.

Dee, Bruce held the Advanced license prior to Extra. In any event, he
passed the "heavy" technical stuff. The Extra used to be a cakewalk
with very little technical content. It was the code requirement that
was a barrier to Bruce.

<SNIP>

The callsign districts were once different than they are today. The 3rd district once included South Jersey (half a state, although it was a separate state, but that was before radio was invented) and Virginia. I once met a guy with a 3 call issued in Virginia, although to confuse matters he had moved to Maryland anyway. I think he's a silent key now, he was pretty old then. Actually, if the old boundaries of the 3rd district were reinstated it would be closer to the demographics.

Code test speeds will never go back up. Instead the code test will go the way of the horse and buggy, and soon. So get over it, people. Nobody's stopping anyone from using code.

73 de Alun, N3KIP

PS: I am a 20 wpm Extra, and I've been licenced 23 years (not all of them in this country).

>
> Good for you. I didn't move boxes. I've never even been to a supply
> depot. I operated radio equipment.

I operated radio equipment as well, but my AFSC wasn't radio operator.
We couldn't find very many radio operators that could handle that
amount of traffic, so we had to deal with it on our own. The radio
ops were best suited for plugging in a patch cord to broadcast
automated rtty and fax products from one of our weather centrals via
10KW HF transmitters. They needed the ocassional reminder when the
feed went off-line.

> > Fact: my AFSC was not "box kicker."
>
> We weren't discussing your AFSC.

It would appear that you had very limited experiences while serving.
You were ordered not to operate amateur radio; you never touched a box
or did anything outside your AFSC. Must be the difference between the
conscription era and the all volunteer force.

If you weren't stationed at a snack bar, and if Len didn't bring it
up, why did you throw it in the ring when discussing where you were
stationed? Maybe you just spent a lot of time at the snack bar.

Len, I'm not going to sit here and argue with you over something this petty. I was clearly using those words in a relative sense - the Northridge earthquake was small and isolated compared to previous earthquakes in California or a hurricane effecting three states. Even the typical California resident would agree, so it is not a "regional-biased description." Enough said.

> You've made the claim that "commercial facilities fail."
> As a generality.

Following a disaster like I described, commercial facilities do fail.

> You've not, repeat NOT, shown that amateur facilities will
> succeed or even work better than commercial facilities in
> disasters.

When those commercial facilities fail, anything is better than nothing.

> You've stated that National Guard units are underequipped,
> late on the scene, and of little use.

Bull! I never claimed that Guard units are under-equipped. Anyone interested can read back over what I actually said for the truth.

As for the "late on the scene" nonsense, I described when they arrived during a specific event (in the Myrtle Beach area following Hurricane Hugo). Did you want me to lie about that? And I never complained about when they arrived - we were thrilled to see them.

I also never claimed National Guard units were "of little use." Instead, I said their communications equipment was of little use because most communications issues had already been resolved by the time they arrived. Furthermore, I said their equipment was useless for the types of communications problems experienced following Hurricane Hugo (fallen police/fire towers covering sections of the downtown area).

> You are following the many-years tone of ARRL "news," that

> and emergencies. That is NOT "news" by any journalistic
> standards. (snip)

Obviously ARRL emphasizes, spotlights, and underlines the role played by Amateurs. It is an Amateur radio organization, covering Amateur radio operators, issues, and events. ARRL makes no more of a claim to be a news organization than any other organization representing a specific segment of this society. Why should this offend you? I hold many memberships in various organizations. The publications for those organizations always emphasize, spotlights, and underlines the activities of their own membership. Does that offend you too?

> It is just self-serving propaganda designed to make

You're not talking to "the bus driver" or anyone else who said those things. You're addressing me, so don't take your aggression towards them out on me.

I wish some of you guys would have said something before I got caught up
in an extended conversation with him. I've never paid too much attention to
him before, so was taken totally off guard by his nonsense.

>It was the code requirement that
>was a barrier to Bruce.

Brian you are so Stupid, the Code was never the problem, the only reason I never took the EXTRA before was, I didnt need the EXTRA. As I have stated many times. I dont operate HF, the only BAND I operate is 6 Meters. I dont even have an HF ant, have no desire to get on HF. As of this date I have never used the EXTRA Privilages and probably never will. You refuse to except the real reason I took the EXTRA Test. I will state it again, maybe it will register this time. I took the EXTRA on a BET, you know this but you refuse to except the truth. Dee, Brian was to Stupid or to Lazy to get the General when it was 13 WPM, now hes to stupid or to lazy to even take the EXTRA Free handout TEST. I think the reason Brian will not even take the EXTRA test is because he knows he will never be able to pass it. He is Betting on getting another FREE Handout from the FCC.

No, this whole thing is over Len's several errors about a non-existent
place, a supply depot and moving boxes. He managed to get quite a bit
wrong in only a couple of sentences.

Just to bust yer stones for sport sure James 'Ole Bean, but the real
wusses in this league are the "accomplished" dxers who are too chicken
to dive into the dx contests out where da rubber really hits da road.
Precious few dx contesters get into the game without having been a
dxer first. You ain't and that's that without prejudice.

(ya WUSS . . !)

> > on a plane well above the domestic contests. And ya have to be able to

That guy has some "issues" well beyond ham radio.

> The CQ WW DX
> 'test is the ultimate whether one is a casual participant chasing new
> ones or is going for a big score.

Righto. One big advantage of the CQ is the number of expeditions which
get into it, lotta straight dxers go ape in the CQs and don't bother
turning in the logs, all they want is the cards. Whatever works works.

> > known I fully expect one of the neighborhood Big Guns to tell me to
> > turn my rcvr on next year.
>
> I haven't decided what to do for this year. I think my days of
> operating 45 out of 48 hours are behind me. .

That's getting to be a bigger and bigger discussion as the average age
of hams creeps upward. Back when I got into the game the ARRL contests
were spread over four weekends per year, 192 hours per year if ya did
both the phone and cw weekends. That's more hours than a salaryman
usually puts into the job per month, ridiculous by today's standards.

And hardly anybody complained. 'Cept a lotta xyl's . . Today there's a lot of grousing about restricting single ops to 30 hours max per contest. I'd certainly vote for that. I can see where all the contests could eventually boil down to maybe a couple sprints per year per dx contest at least for single ops.

> I lean more toward a single
> band effort on 160, 80 or 40m. That way I can get enough sleep

My all-time favorite haunt is 80cw with 75 right behind. I've never had the room for a decent 160 antenna or it would probably be my favorite. Snagging the really rare ones anywhere below 4 Mhz is in a class by itself in my opinion, the ultimate test.

Yeah, single-band entries are a very good idea, they greatly simplify life and yer focus. And you can get the sleep when the band is dead. Unless yer supposed to be supporting a club effort where all that matters is gross score.

There was a bit of tongue-in-cheek on my part here, there was a time when I would have killed for a 2B/2BQ and a Ranger lashup. The 2B is a milestone radio and I'd love to have one, I've been needling k2sb for decades about selling me his pristine 2B/2BQ and he keeps telling me "maybe when you're old enough." Heh. The Ranger wasn't such a hot TX, had a major problem with it's drift-prone VFO. I always liked the little Johnson Navigator though. I did have a Valiant II and 75A4 station which did a great job. But you can keep yer mahogany-mounted 210s!

I'm all ate up with a new Field Day antenna design, weird thing but it might be a hot ticket for 20 & 15. A pair of half-wave phased verticals hung off the ends of an SOP half-wave dipole. Fell out a couple chats with n3rs. I have it up for discussion in dot antennas. More later.

Ya mean like what happened to the rates after the trust-busters broke
up AT&T to promote competition? Ya mean like the way the cable
companies have reduced consumer costs when they entered the phone biz
in competition with the Bells? Yeah RIGHT!

> I hope no one is stupid enough to believe that the
> Millions of people in this country, are going to let a bunch of Hams, dictate
> to them that they cant have this because the Hams might get some Interference.

Hams are not the only users of the HF spectrum by a long shot and some
of those other users have DoD-deep pockets. Check what happened to PLC
in Japan when it was proposed.

All of that stuff happened in the middle of the King Spark days eh? Imagine that. Guess 200 meters and down is wrong then. Course they must be...Len over 21 says so.

Hey Len...stick to what you know....not a damn thing about Amateur Radio.

>>Contributions To Amateur Radio
>
>None yet. I had designed circuits, but none of these could be considered
>contributions. Probably never, now that I am not in the EE field.

Please cite the law, regulation or other requirement taht you be "in the
EE field" in order to make a contribution to Amatuer Radio, Vipul.

YOU are teh one who frequently cites a sole interest in "experimenting".
So...Now that you're not working in a shop with a bench full of test gear to
make it easy for you, you can't "design" anything?

>It would be interesting to hear about lenover21's contributions. Then someone
>might jump in and claim these are not "amateur" radio contributions.

Go to a hamfest (even if it IS against your family's wishes snickersnicker
giggle giggle) and find someone who has a box full of old "Ham Radio:
magazines. They can usually be had for a quarter a piece.

Lennie, unable to get the recognition he felt he deserved in the
professional trades, resorted to submitting his work to HR in the hopes that
his "Gee Whiz" lecturing would be looked upon with awe and wonder by the
unwashed masses of Amatuer Radio.

The work is interesting, but I doubt was exclusively his, although he was
the only by-line on the articles. (Those that I've seen...)

Other than this, Lennie's contributions to Amateur Radio are zero.

Mine is also a recycled call. Similar story. Issued to me when I changed
districts, as was REQUIRED back in the 70s.

My point is BUYING a call. I think that is not so good. But everyone has
an opinion.

I just dont like the buying a callsign bit. Whatever. And I have no
particular problem with re-issuing the calls.

You may not remember this...the issue of reissuing calls was brought up back
in the 70s. The FCC said they couldnt do that because of their 'program' in
the computer....hmmmmm.

May be the same answer now? Actually its likely more like there too lazy to
do the paperwork. Don't believe me? Then why do they charge for 'vanity'
calls ???

A guy asked me once what my call stood for (NTI) I told him it was me.

>

> True, I only think in terms of US money.
>
> >The amateur requirement is for a transceiver, not just a receiver.
>
> Are transmitters by themselves forbidden..?,

Transmitting without listening is poor amateur operating practice.
About the only applications for a "transmitter by itself" in amateur
radio are remote control systems and beacons.
>
> >There is also
> >the matter of performance, particularly unwanted-sideband rejection in
> >reception.
>
> "Unwanted sideband rejection?" In narrowband CW receivers?

Yes. Sometimes called the "audio image". I figured you would not be
familiar with that term, so I used "unwanted sideband".

Actually from the non-ham Len over 21his lack of knowledge of Amateur Radios history is not surprising. Hams have contributed quite a lot into the technology we see today.

Cellphones is a good example. It began with Amateur radio linking of repeaters.

Slow Scan TV....utilized on several of the early moon shots and on the deep space probes, such as voyager. Invented and perfected by ham radio.

And amongst many others the Internet you are reading this over comes from ham radio and PACKET radio linking.

Now-a-days we have much experimenting going on in the digital field within Amateur Radio.

Check out AMSAT for some cutting edge stuff.

Sorry Len.... your full of crap as usual.

> A hobby activity involving radio does NOT directly affect public safety.

Sure it does.

An errant harmonic on HF can cause TVI and other BCI to private citizens.

Harmonics on 6 meters can also interfere with TV, broadcast and
aeronautical navaids.

"Freebanders", when allowed to roam at will, can plop down DIRECTLY on
Police, Fire and EMS channels, and have been known to do so. Sometimes their
being there is NO accident.

Jammed PS communications means a delay in getting what is needed to where
it's needed. RFI'd navaids means people get can hurt.

Potential for interference with Navaids, public safety communications and
general broadcast media is more than enough reason to maintain certain rules
and regulations on ANY "radio hobby" that involves transmitting.

Great.

>This half-hour story, on Ham radio, by a credible news organization, was
>surely
>heard by many.

I'll bet MORE people heard about Amateur Radio via Paul Harvey than heard about it on NPR, Vipul. Paul Harvey is a syndicated program heard on hundreds of stations world wide. NPR does NOT ahve the same distribution base as Mr.Harvey does.

And Mr Harvey IS a "credible news (organization)". NPR is also know for it's own very slanted and way-left-of-center policeies.

Good idea, Ryan, but in doing so the FCC would be cutting themselves
off from the only real revenue the ARS produces - vanity call fees.

> > > A callsign is just a callsign... that's it.

It can make a difference in operating situations. A short snappy
callsign has advantages over a long one, particularly in contests and
other competitive situations. I had a 2x3 call for ten years before I
got this one.

> > The callsign of a person is like his name. Unique to that person alone.

I'd say it's more than that.

Oddly enough, I'm the original holder of each of the three callsigns I
have had.

> > Lets go buy a dead mans call.
>
> If the concept of never reissuing a call after a person has passed came to

> so.... feel free though.

More important, we'd soon run out of the really desirable short calls.

> Why the US Coast Guard Auxilliary?

Why NOT the Coast Guard Auxiliary, Lennie? Their record of public service is legion. You ARE in an area of significant USCGA activity, including aeronautical assets (USCGA has it's own flight program too). It's a very honorable and meaningful way to serve, if public service is REALLY what you'd like to do.

They'll also let you operate on HF without a Morse Code test. You can then use that as one more example of how you "operate" on HF without having taken "the test".

As are Puerto Ricans, si?

> There are more citizens of the USA in California
> than any other state in the Union.

Ca is as culturally different as any foreign country. One example. If
you are arrested here you get to make a phone call and be arraigned
before a judge as soon as the courts open. But when a subordinate got
arrested for DWI the PRK kept him incommunicado and didn't let him see a
judge for 3 days. Then they kept him another two for 'processing' even
tho the Judge had only fined him. Reminded me of Mexico but he saw
nothing wrong with that cuz he was from Ca.
>
> Yes, everyone in the United States of America has seen your
> mythical country's "reliance on self" from the seasonal
> hurricane disasters where all the commercial facilities "fail"
> only to be miraculously "saved" by hobbyists. ...

Most Californians cannot even begin to grasp what I'm saying. Commercial facilities are just as reliable and as unreliable everywhere, even in Europe. Difference is, we aren't as reliant on them. Why? Like H.D. riders say "If you have to ask ...."

> citizens have seen/heard of the east-coast sniper randomly
> killing people in the east for at least a month of time, the
> mysterious eastern anthrax mailer who has yet to be
> identified, the schoolboy murderer/suicide ....

Yes, and the hillside strangler and ... But that's NOT the point. There's crime everywhere. Difference is San Diego police murdered more people than all of the above combined in 1978 alone and that's not counting criminals. They're so trigger happy two got into a gun fight over who'd drive the car! That wouldn't be tolerated in America, let alone encouraged like it is in the PRK.

> the double agents in the CIA and FBI who had done
> their work for years, CWO Walker of the USN doing his dirty
> deeds also for years selling secrets of US military
> cryptography to the USSR,

Wasn't Walker from California? If not, he must have been a transient, right?

> riots and fires in Jersey City, ...
and Watts and Compton and ....
> the crime rampant on the streets of NYC and ....
Frisco and LA and SD and ....

But that's just smoke and mirrors needed to maintain your illusions. Except for Oky City these were ALL perp'ed by criminals not police. you can't admit that else you'd have to admit to yourself that you could be their next victim and then you'd have to emigrate like I did. Check out eBay land sales - there're sites So.E. of El Paso wher you'd be safe.

> seasonal tornado devastation in the Midwest, flooding rivers....

Yes, there are natural disasters in parts of America. WE plan for them. You OTOH never know when you'll be murdered by the very folks you think protect you. "What" you say "not in de Hotel California! It's a lovely place ..."
>
> >We have volunteer fire and rescue squads,....
>
> That's nice. Enjoy being a separate "nation" of all amateurs.

We do! If any of our sheriffs acted like LAPD we'd send him to the PRK and elect somebody else. Like I said, different strokes ....
>

> of roving snipers randomly killing people in a couple states for
> months. Feel comfortable about the FBI killing the wife of a
> militant or burning down the Koresh kompound or destroying the
> Muraugh Building with homemade explosives.

There are two important differences. First, we caught the snipers and will kill them, but AFAIK neither ElMonte's SWAT team nor any San Diego cops who murdered people will ever see the death chamber. In fact, Californians treat them as heros. Second, we get to shoot back. FBI? We see FBI as 'California' because D.C. is so much like So.Central L.A.

> Now go out to your militia compound ....

Funny you should mention that. The Militia of The Lamb of God was at war with that of another S.D. church back in 78-79 and the Crips and Bloods were at it long before that. We even had what'd now be called a militia at beautiful downtown Compton Hi back in the 50's and now you have LAPD, CHP, and other lawless gangs. AFAIK there's nothing like that here.

What amazes me is Californians not only accept a police state, they LIKE it. For example, S.D. police shot a man dead in his own back yard without warning. He was sitting at a table legally cleaning a legally owned rifle.

There'd be a hue and cry for those cops' hides back here. If their boss didn't charge them he'd be on his way to PRK next election.

But Californians were quick to excuse the murder. "He shouldn't have had a gun" or "Prolly some transient"; anything to keep the illusion that *they* couldn't be next. That's prolly what the old man in Compton thot when El Monte SWAT blew his head off for having money. What's Ca's answer to that? Well he shoulda had his money in the bank so police couldn't steal it?? That's the cultural difference which makes California more like a banana republic.

Biased? You bet! Now y'all excuse me I gotta check my generator then go have coffee with bubba and the sheriff at the fire house ....

no, it acts as a petitioner, not a representative and as such technically
has no more weight than any other individual or group. in practice the fcc
probably looks more closely at what the arrl writes, but can not 'count
votes' as if they represented a fixed size group.

Out of curiosity, do you recite your registration numbers every ten
minutes while taking advantages of the privileges and opportunities
they afford you?

The purpose of callsigns are to identify radio operators and/or
stations. This is the same purpose of a person's name, so it is
natural that some people would consider callsigns to be nicknames and
precious to them. It's also natural for some people to feel that
callsigns, like family names, should be handed down to family
relatives when appropriate.

In the past decade, I've changed callsign districts four times.
Getting four different callsigns would have sucked, so I'm happy I
didn't have to change. As I mentioned earlier, I'm totally okay with
appending a district designator so that someone doesn't think the band
is open in the wrong direction or something.

I have more "bests" than I can count, great hobby. But I have one
"worst" which still haunts me today. Early May 1956, the Hungarians
had revolted against their Soviet occupiers a few days earlier, the
Hungarian hams were all over the bands pleading for help from the
west. Which never came as the Soviets crushed the Hungarians with
tanks and the HAs disappeared from the bands overnight. Some made it
over the fence, many did not and were never heard again.

All I could do was sit in the shack and stare at my HQ-129. It was a
long, long time before any hams in the west worked any Soviet hams
again.

>book. That means word-for-word memorization.. Isn't that like something
>over 300+ questions???

Where I live there are a large number of actors working for stage,
film, and television companies. A typical script for a one-hour
TV show is 60 to 70 pages of dialogue plus general directions of
actor's responses, positions, and activities in a scene. Shooting
time for a one-hour TV show is 5 to 6 days typically, if taken all
for one episode. That requires all actors to memorize their own
lines, plus the lines of other actors in the scene, plus all the
other script information at a rate of an average of about 10 pages
per day.

Few actors have the background experience to have been the
characters they portray so their normal work requires extensive
memorization...not just of lines, but moods, attitudes, body
language, particular expressions needed at certain times. In the
case of shows having a large amount of specific jargon (law or
medical shows) in dialogue, actors don't have the benefit of
experience even close to the field of their characters.

Memorization CAN be done on a large scale. It is proved in the
entertainment industry every day. That the public is unaware of
the memorization is a tribute to all the other entertainment industry
specialists who blend all the shooting together into a reasonably
believable show or episode or production.

> I suspect the FCC already considers that to some extent. However, I doubt
>anyone would give that consideration a specific weight. ARRL is the largest
>ham radio organization in the country. That alone makes their position on an
>issue worthy of serious notice and consideration.

ARRL engages a lobbying service in DC as well as having a law
firm on retainer. Names, addresses, and fees required are listed
on ARRL Federal Income Tax forms. Those forms were available
as PDF files on a website from 2001 and some previous years.
ARRL's tax preparation was done by Arthur B. Andersen Co.

As far as I know, ARRL is the ONLY organization able to afford
both a lobby firm and a law firm IN the Washington, DC, area
solely for amateur radio. That enables them to exert more
influence by the minority membership of ARRL, compared to the
three-quarters of all licensed US amateurs who have no such
lobbying or law service of their own.

The FCC will accept any group for "ex parte" presentations in-
person. This was done by Carl Stevenson and Bill Sohl in
representing No Code International's viewpoint on NPRM 98-143.
Such ex parte presentations require the presenter to be IN
Washington at the FCC. That's an imposition on individuals and
small groups who cannot afford the services of lobbying
businesses or communications law firms.

Internet access is an "equalizer" of sorts on the ordinary citizens
who live some distance from DC and cannot afford representatives
there. This was proven by the large response on NPRM 98-143.
None of us have much knowledge of how the FCC handles
consideration of any matter by Internet communications. Paper
copies of comments are processed by someone, at least by
evidence of time-stamping reception of paper copies which
become digitized for the ECFS databases.

I've never had any amateur radio examination nor tried to get one
in any country. There is no record anywhere of such figments of
your imagination. If you wish to propagate a LIE that I supposedly
did so, feel free. That won't absolve you of continuing a LIE with
you as the perpetrator.

I took an examination for a First Class Radiotelephone (Commercial)
Operator License in 1956 at the (then) FCC Field Office in Chicago,
Illinois, passing all required four parts (at that time). That required
travel of about 90 miles from my home town to Chicago. I was 23
and newly released from US Army active duty. No "Q&A" books
were studied for that test, no "question pools" were available for
memorizing the correct answers. I borrowed a loose-leaf notebook
of appropriate FCC regulations (loose-leaf format was then the
printing and distribution convention) and studied that for about a
week prior to the test. There was no snow on the ground on the
day of the test. I wore shoes and socks and took the train to
Chicago, the track being on approximately level ground common to
prarie conditions of northern Illinois. There were about three steps
up and down on the train car and there was a wide stairway to the
FCC office on an upper floor of the Federal Building in Chicago.
[no "walking barefoot in the snow uphill both ways" :-)]

There was some "QRM" during the test from a couple of Radio-
Telegraph (Commercial) Operator applicants taking their code
examination in the same room. In the middle of my test session
there was a fire drill in the Federal Building which caused much
grumbling from the FCC officials and examinees alike. There were

no coffee or drink machines in working order during that fire drill break but water fountains were working and restrooms were available for use. After the fire drill there was some sort of argument between an FCC official and one of the Radiotelegraph examinees and that examinee had to start over on his code test. Written test examinees had to sit on the standard oak office chairs at large over-comfortable-height standard issue federal office furniture common to the 1950s.

Written examination scoring of multiple-choice questions was done with an overlay sheet guide. The four required schematics were studied personally by FCC examiners. Mine passed but there was some discussion with one of the other two Radio-telephone examinees on one of his schematics' legibility. Inquiring as to my score on the test, the answer I received was a perfunctory "you passed." That was it. The license certificate was received via surface mail approximately two weeks later.

Oh, yeah, when I took that First 'Phone test, I'd already had two solid years of HF transmitter operations and maintenance followed by a year of microwave radio relay operations, maintenance, and supervision. Would you consider that FCC test some kind of "entry" into a "lifetime learning experience?" Or do I need to take an AMATEUR test now to prove my radio manhood? :-)

>All of that stuff happened in the middle of the King Spark days eh? Imagine
>that. Guess 200 meters and down is wrong then.

That historical work ("200 Meters and Down") sins by omission in order to highlight amateur radio. Not my fault...but that is typical of the incomplete picture of the whole of radio history since 1896.

The first ever radio membership organization is the Radio Club of America, founded in 1909. That club still exists but long ago demphasized amateur involvement. That founding was 5 years before three New Englanders came up with a local club they called the American Radio Relay League. The RCA (not to be confused with the old RCA Corporation) has a number of history items on its website that may be of interest to more broad-minded amateurs. Those who wish to have their radio information selectively spoon-fed to them can stick with the publications from Newington.

Prior to World War One, the overwhelming type of radio transmitter of any kind was the on-off keyed damped-wave oscillation type called "spark" or the huge VLF rotary alternator type. There were a few cross-breeds between those two but they were few. While the three-element vacuum tube is marked as invented around 1908, it would be in the post-WW1 era when it became low enough in cost to be used by radio amateurs. Radio amateurs almost entirely used the "spark" transmitter type since rotary alternators were way too expensive for hobby applications.

In a rare pioneering effort, amplitude modulation was applied to a rotary alternator VLF generator in 1906 but required a water-cooled microphone used for relatively short periods. That was in the nature of an academic experiment. Radio communication anywhere prior to 1914 was by on-off transmitter keying codes for practically any user.

Radio receivers consisted of simple "diode" types having galena crystals or the iron-filing "coherer" elements as the diode equivalent. Very few, if any, radio amateurs had vacuum tube detector signal audio amplifiers prior to 1914. There were no beat frequency oscillators to make any adjustable audio tone for carrier-on conditions...a received "tone" was the spark-interrupter repetition period having a scratchy sound.

"Radio construction" for amateurs was mainly mechanical, the cheap way using flat wood structures (origin of the generic prototype name of "breadboard") with wires generally fastened together by wrapping around wood screws. Amateurs with fatter wallets could use metal structures that looked more "professional" in the style of the day. Soldered wire joints were actually not common prior to 1914. It was not unheard

of to use varnished round pressed-oatmeal containers as
coil forms.

Let's face it, early radio technology was PRIMITIVE. Any
improvement in construction represented a virtual plateau-
jump in advancing the state of the art of that day.

"Morse code" was already 70 years old in 1914. Variants of
morse codes had communications applications on landlines
worldwide for 52 years by the time of the first demonstration of
radio as a communications medium in 1896. The demonstrators
in 1896 were Marconi, an entrepreneur in Italy, and Popov, an
academician in Russia. Both used variants of morse codes.

>Course they must be...Len over 21 says so.

I wasn't there in 1896 or 1914 and didn't exist until 1932. My
references are many and varied sources of information from
the radio industry, academics, professional organizations and
membership societies not concentrating solely on or about
amateurism.

>Hey Len...stick to what you know....not a damn thing about Amateur Radio.

There are only a few "damning" things about amateur radio.
Most of amateur radio is quite good. It is a few of the much-later
participants who get off on wild tears of their imagination and
self-righteous pontificating about their hobby involvement.

US amateur radio is one of the most open and public hobby
activities in the United States. US civil radio regulations
specifically prohibit any form of communications mode intended
to hide or obscure communications content in amateur radio.
There is no secrecy in US amateur radio and anyone can over-
hear amateur transmissions with an appropriate receiver. There
are no US laws prohibiting reception of any amateur bands as
there are for the cellular telephone band.

There are an unfortunate few US radio amateurs who wish an
almost ultimate elitism and recognition for undeserved glory-of-
accomplishment in a hobby endeavor and undeserved honors
for achievement such to allow them to look down on others.
That's the damning part.

The FCC tests are not a survey of your "lifetime learning experience",
Lennie. It's a test to determine if you're qualified to be a Commission
licensee NOW.

Obviously at this point you are NOT qualified to be a Commission
licensee, at least in the Amateur Radio Service.

Thank God for small favors.

Steve, K4YZ

It's been tried at least a couple times in the past and those groups
quietly folded, ya gotta pay attention to the lessons of history. Most
hobby interests are typically supported by "one party" organizations,
we're just another one. Beyond that I don't think it would be in the
best interest of the hobby to dilute whatever voice the ARRL does have
in the regulatory field.

We'd have a helluva lot fewer Mhz available if the ARRL didn't fight
tooth and nail every single time some commercial popped up looking for

more >30 Mhz bandwidth. Give the devil his due.

No Len you don't have to take the AMATEUR test. In fact you don't have to do anything. And I didn't say for a FACT that you failed a Amateur test. I said 'I THINK I KNOW ... etc.

You are a world-class asshole ain't ya Lennie me boy? Ever been in a redneck bar with that attitude?

Since the lines are not shielded. It seems to me that a large amount of RF
properly applied could, shall we say, 'disrupt' the link.

I held a California Driver License from 1957 to 2000, and after
the initial vision, written, and road tests only had to take a
vision and written test twice for renewal - once because I
renewed four days into the grace period and once by "random
selection". All the rest of the renewals were strictly by mail
with no re-exams.

This was after the call sign sale scandal, and "they" were
scared stiff of doing anything but sequential issuance lest it
be misinterpreted as granting "special privileges".

>May be the same answer now? Actually its likely more like there too lazy to
>do the paperwork.

Do not confuse lack of staff with laziness. Processing staff
vacancies at the Gettysburg License Center have not been filled
as they occur AFAIK.

>Don't believe me? Then why do they charge for 'vanity' calls ???

For the same reason that they are called "vanity calls" rather
than "preferred calls" or "requested calls" -- that's what the
legislation that The Congress passed and forced upon the
Commission requires, the same legislation that mandates renewal
and license fees for other radio services. It came about
in an era when The Congress saw a "cash cow" in anything that
any Federal agency did for its regulated public.

Unless thnigs have changed, the Commission does not keep one
cent of the money - it goes into the U.S. Treasury's General
Fund, just like the money collected from monetary penalties
(forfeitures) and proceeds from the spectrum auctions.

But in all your time in the Air Force you never moved a box.

I did not, however, see Al Gore. I met his
> father once though. He wasn't in the Air Force either.

Algore was a grunt in Vietnam. But you didn't see him because you
were in the Air Force. But you say that you saw plenty of grunts.
And you say that you saw Algore's father. If Algore's father wasn't
in the Air Force, was he one of the grunts you saw?

OK. You didn't operate RTTY equipment, and you (say you) didn't
operate amateur radio equipment either. Why were you there again?

I found that the
> weather men could sometimes predict the weather.

When they were on duty. They're only on duty sometimes. They do get
time off to go hang out in snack bar like the other personnel.

> > > > Fact: my AFSC was not "box kicker."

It's against ITU rules - although that never stopped the FCC before. The ITU lays down the following, very roughly speaking -

Ham and experimental calls - prefix + 1 digit + 1 to 3 letters
Aircraft - prefix + '-' + 1 to 3 letters (see what I mean?)
Everything else - Prefix + 1 to 3 letters

Ships can optionally use their name as a callsign, and stations that are fixed or land mobile are not supposed to be issued a call unless their signals can cross international borders.

The ITU definition of a prefix is not the same as in the WPX contest, e.g. in my call (N3KIP) the prefix is really 'N', not 'N3'.

The FCC aleady issues the wrong format calls to aircraft, issues calls to stations that shouldn't have any, and issues all kinds of calls that don't fit any of these formats. So, I guess issuing wierd non-ITU ham calls wouldn't be too big a departure for them anyway, ROTFL!

73 de Alun, N3KIP

Sorry Ryan, it's a math notation for a ratio (100 to 1) - in this case
100 CBrs per ham were we to try to use "their" channels.

The Extra pool is 665 questions. You don't need to memorize word for word
just enough key words that you have the answers paired correctly with the
questions so you don't get confused between similar questions. However even
on that basis, 665 is too many to learn in a single day. One might be able
to do it with a photographic memory but few are so blessed.

It's not. The extra test has 50 questions while the others have only 35.

> Many including non-EE children pass the Technician class license in a day.

I don't know many children who have electrical engineering degrees! :-)

> The material for the Extra may be harder, IF one actually learned it. If not,
> it looks like the Extra test is actually easier than the Technician if one just
> memorizes the question pool.

Since there are more questions to memorize, I must disagree. The percentage of correct answers remains at 75%, with the fractional number of questions truncated, but more questions means more correct answers needed.

As for the THEORY behind the questions, the former part which was the advanced test pool is the hardest. The old element 4B part was easy because it didn't really stand alone, but had element 1C to go with it for the actual license upgrade (code medical waivers notwithstanding).

No one has said it needs to be the ARRL. It's simply that there is no other organization large enough in members, organized enough to be effective and widespread enough across the country to be able to achieve any results. It is a de facto representative not de jure. Other groups may try but they are just too small to have much impact.

>
> >
> > If one has a difference of opinion, they can bring this up to the ARRL.
If

Then become a member. ARRL is the organization with the most impact and if you choose not to be a member, you are choosing to not be heard.

>

Here Vshah goes off into his personally created, artificial distinction between hams and amateurs. He fails to realize that those who do belong to ARRL are probably split in the same percentages in their interests as those who are not members.

So? My sister lives in L.A. Do you know her?

> But you didn't see him because you
> were in the Air Force.

Really? I thought I didn't see him because I had no idea who he was.
To this day, I have no idea where he spent his time. I have some
friends in Columbus. Do you know them? Have you ever seen them?

> But you say that you saw plenty of grunts.

I DID say that, didn't I?

> And you say that you saw Algore's father. If Algore's father wasn't
> in the Air Force, was he one of the grunts you saw?

No, he was busy being a senator from Tennessee. I saw him in West Palm
Beach.

During the times they were on duty, they could sometimes predict the
weather. During the monsoon season their predictions were much more
accurate.

> > > It would appear that you had very limited experiences while serving.

I don't have a problem with anyone who did so. Those who entered under
those circumstances traded two years of their lives for four years of
their lives. Are you trying to make an issue of it?

> > > > > Fact: You've got more cuts, skinned knees, and bruises as a result of

>Cellphones is a good example. It began with Amateur radio linking of
>repeaters.

BZZZT! Wrong answer, Dan. Sorry.

Cellular telephones can be traced back to the first "handie-talkies"
designed by Motorola back in WW2. First two-way radio that
could be held in one hand. Motorola followed that with the SCR-300
"walkie-talkie" during WW2, low VHF range two-way backpack.
The follow-on designs available just after WW2 and used in the
Korean War (AN/PRC-9 as one example of three) had an adapter
cable and box to couple two sets for unattended repeater use.
A whole family of radio relay equipment was operational with the
US military at the end of WW2 that was specifically designed for
unattended repeater use, including multiple-site linking.

ATT may have had the very first pocket-size paging receiver, the
Bell System's "Pageboy" about 1960, a simple VHF receiver with
vibrating audio-range reeds for tone decoding. [was written up in
technical detail in the Bell System Technical Journal in one issue
about 1961] About a decade later the first of the portable, mobile

telephone radios appeared, rather bulky, and with conventional handsets, suitable only for use within vehicles. These were VHF range, not the cordless phone variety used indoors.

Meanwhile, Motorola and others designed and made VHF and UHF handheld two-way radios that featured sub-audible audio signalling for business, utility, and public safety radio use. Many pagers were also designed and made, smaller than the Pageboy. Some of those radio user networks had unattended repeater stations. Several system concepts were built and studied beginning in the 1970s that utilized much digital signalling and control from any site...which eventually morphed into the UHF cellular concept employed in the USA and elsewhere today.

Today's "cell phone" owes its existance to several areas of technology: Development of efficient solid-state RF amplifiers centered on 1 GHZ; Very Large Scale Integrated Circuits of low power demand to handle all the digital functions and control needed in a single small IC package; efficient batteries and charging system to enable long use.

>Slow Scan TV....utilized on several of the early moon shots and on the deep
>space probes, such as voyager. Invented and perfected by ham radio.

BZZZT! Wrong again, Dan.

The very first ever television was already "slow-scan." Those were mechanical and their ultimate mechanical form was done by Scotsman John Logie Baird in the UK. The invention of the iconoscope enabled all-electronic television cameras and after WW2 the image orthicon (big studio equipment) and vidicon (small portable cameras) allowed better imaging. All invented and perfected by commercial interests well before we had a space program such as Mercury.

The first "moon shot" (literally) unmanned vehicles that impacted the moon used small vidicon cameras of conventional higher scan rates; receiving equipment was improved at terrestrial stations to enable capturing and storing individual scan frames. The early deep space probes used highly-modified camera vacuum tubes to study a very wide spectrum above and below human visual range. Later models used semiconductor camera ICs for lighter weight and less power consumption. All designed and built by NASA's contractors.

>And amongst many others the Internet you are reading this over comes from
>ham radio and PACKET radio linking.

AOL doesn't use "ham radio links," works over POTS (Plain Old Telephone System). Inter-exchange cable and fiber linking of the telephone system is done by high-speed digital systems, notably the "T-1 Carrier" running at 1.544 MBPS with many many voice

channels carried in "packets." T-1 and other similar carrier systems can be carried on microwave radio and many such links exist in both telco and other business use.

The "packet" concept probably has more of an origin in microwave radio relay systems using various forms of pulse modulation. Two examples are the AN/TRC-5 and AN/TRC-6 military relay systems operational in the late 1940s. The TRC-6 was in low X-band and came with its own tower. By 1950 General Electric had a 24 voice channel radio relay system on 1.8 GHz for commercial users followed shortly by Philco with a similar C-band system, also 24 channels. The Bell System laboratories did extensive research into many forms of packetized high-speed time multiplexing in the early 1950s and the T-1 Carrier is just one example.

While not "packet" in form the USN contract time-division MUX of 1952 for putting 4 TTY channels into one voice-bandwidth circuit utilized synchronization and framing pulses. The military and commercial "torn-tape" TTY relay system that began before WW2 is the ancestor of "packet" message relay systems. By the time of AUTODIN the TTY relay system had eliminated the human link in relaying, going directly to electronic relaying. Today's DSN (Digital Switched Network) for government and the military can handle everything the Internet can handle.

I don't believe that direct Internet interface of amateur repeaters to commercial ISPs is in line with the definition of AMATEUR radio, that of "an activity without pecuniary compensation." Perhaps you know of an ISP operating as a purely non-profit organization? :-)

>Now-a-days we have much experimenting going on in the digital field within
>Amateur Radio.

Yes, automatic position reporting on amateur VHF-UHF radio using GPSS data input. Without GPS there's no data. GPSS began as the USN's NAVSTAR in 1970.

Embedded microcontrollers in just about every ready-built amateur transceiver, receiver, transmitter, automatic antenna tuner, all designed and manufactured by non-amateurs...adapted by some amateurs for their own use.

Adaptation of microcontrollers in amateur radio of limited relative experimentation enabled by the Microchip PIC line and the Basic STAMP family, picking up what was done by ordinary, non-amateur hobbyists involved in robotics.

Automatic Link Establishment such as on SHARES network... oops, sorry, that is government communications on HF, very little done in amateur radio. Strike ALE. Or drink it.

There is Digital Signal Processing or DSP for true brick-wall audio filtering...following already-done DSP in the commercial area of electronics. DSP above audio in amateur radio equipment was designed and produced by profit-making companies first. The same for SDR or Software Defined Radio.

>Check out AMSAT for some cutting edge stuff.

Check out TAPR (Tucson Amateur Packet Radio) for more practical digital experimentation...such as the "world's most accurate clock" using the GPSS as the source.

>Sorry Len.... your full of crap as usual.

Sorry, Dan. You are the one with mental constipation.

If all you read about radio is from QST, your mental constipation will become terminal.

Exactly. Thats the way to pass the test. Also, alot of the questions are
similar, just rephrased, which makes it even easier.

>However even
>on that basis, 665 is too many to learn in a single day.

Yes, this would probably need two days. One day for Technician, Two days for
Extra. And I mean almost anyone, not just those with great memorization skills.

>5 wpm is not a hard thing to achieve.
Yes, but it does take months of effort. Learning this realtime encoding skill doesn't get me much. For me, the benefit is small compare to the effort.

I'd agree with that. A little competition is always a good thing. I
don't think they do bad as the only game in town, but it is hard to
repreesent all hams, because we all know they have lots of different
opinions.

>>Things like band threats are real.

Now that's something I would expect the more savvy of the technicians
to do. In my own case, I'm not interested in the higher bands very much,

beyond repeater access. But that may change some day.

'bout time.

> Your target is 300 Q's, you say?

Given decent condx and antennas for three bands 300 q's should be
achievable w/100w. If condx are anything like they were early this
week I'll rent a couple flicks and forget the whole thing.

> > "maybe when you're old enough." Heh. The Ranger wasn't such a hot TX,

The Navigator was noticably more stable than the Ranger probably due
to all that "extra stuff" in the Ranger.

> Dern things don't transceive - I gave that game up back in 79 when the
> Southgate Type 5 went online. The K2 has dual VFOs...

Transcieve is handy but it's not an end-all. Split receive is very handy when dxing, I had three receive freqs . . 1966? The 75A4 and the T4/R4 combo. That was some ears. The new rigs like the MP are even slicker, fulltime dual receive via stereo headsets.

> I got some 24As and a few 27s that need a home...

The Delaware County SPCA is on Sandy Bank Road in Media.

> > More later.
>
> Sounds like a "bobtail curtain"

Completely different critter. Got a lotta senior antenna gurus scratching their heads. First-pass modeling by one of 'em indicates more or less omnidirectional low angle 2.71 dB gain with the flattop at 45 feet. The low angle is not particularly good news for FD but we'll see what falls out of more comprehensive modeling.

>Here Vshah goes off into his personally created, artificial distinction
>between hams and amateurs. He fails to realize that those who do belong to
>ARRL are probably split in the same percentages in their interests as those
>who are not members.

Yes, they are split in the same percentages, whether or no they belong to the ARRL. That still does not change the difference between Hams and amateurs. I did not say Hams did not belong to the ARRL.

It is not artificial distinction. The poll results show which areas Hams are most interested in. More Hams are interested in Antennas and CW than troubleshooting, electronics theory.

This is shown in the various surveys. The interests are further shown in the local clubs, their newsletters, and Hams at Hamfests in several states.

And there is an element of tradition in Ham radio. For example, in code class, they not only teach the code, but the various "additional vocabulary" in the example paragraph. These conventions are not required, yet some people have the desire to use them. These are <some of the> conventions of Ham radio, which mainly experimenters may not use.

Some of the new EEs or hobbyists may be discouraged by the focus of most of the current clubs.

Also, funds are involved. They sponser some programs to encourage certain goals. I do not agree with all of their programs, but most of them seem to be for a good cause.

An organization can do this, while individuals or just local clubs may not be able to.

Months of effort? For five words per minute? Aren't you the guy who
claims that the written exams are so easy that anyone can memorize
everything in a day? For a sharp kid like you, learning morse shouldn't
take over a week or two.

I guess it beats wearing a belt. I have seen some of these "old farts" that wear those as far up as 12" from their chins!
As long as I live (while not in uniform that is) I will resort to either the good old blue jeans or the Docker style pants. (dependant on the occasion obviously)

Let me pose this one to ya then Dan, what if you were issued W4ASS or W4FUK or many other "offensive" combinations? Would you want to "buy" one then?? The paying for the call is a fee for the processing of the paperwork as far as I understand...

I am contemplating getting the call of an old friend of mine who was like a 2nd father to me, who has since passed on. He let his license slip and had not pursued it after it after 1992. We had talked and I asked him if I ever pursued his call would he have a problem with that, and his response was that he would be honored. Now in this case, he was not "blood related" but closer as a father than my father was at times growing up. According to your statements, this is still a bad thing if I pursue it.

Out of curiosity, do you recite your registration numbers every ten
minutes while taking advantages of the privileges and opportunities
they afford you?

My ham radio registration yes.... as in accordance to the rules. My license
plate, or drivers license, no.

The purpose of callsigns are to identify radio operators and/or
stations. This is the same purpose of a person's name, so it is
natural that some people would consider callsigns to be nicknames and
precious to them. It's also natural for some people to feel that
callsigns, like family names, should be handed down to family
relatives when appropriate.

Some could consider a license plate the same thing too.... (in my case my
call is on my plate though)

>The FCC aleady issues the wrong format calls to aircraft...(SNIP)

Funny you mention this, Alun. I was watching a show on Discover Wings not too long ago (A Plane Is Born) and was listening to the ATC traffic. I was wondering how different it would sound in the US if we had all letter registrations.

I think it would be very confusing to people who do not use a radio more often than an hour or two a month around the pattern. While this system works fine in many othr countries where there is no where near the number of registered aircraft as the United States, I wonder how well it wouuld go here?

Of course after just one generation of pilots taught under the "new" system, they'd be wondering how we ever kept ffrom getting confused!

I am, and they should. "The Government" expects me to obey all laws, and asserts that ignorance of the law is no excuse for not complying with it. I expect no less of them.

No law (save for the Ten Commandments) is written in stone and is certainly subject to review and change. However once implemented, whether a speed limit in a school zone, don't spit on the side walk, or how radio calsigns should be formatted, should be obeyed, even by the government that "wrote" it.

Agreed.... we had someone who had let thier 5-7 year old kid talk on the HT or base radio, that was also on our county fire frequency a couple months ago, and it definitely tied up that repeater. They never found out who was doing it, but the potential for possible safety risks for the county firefighters could have been real, if there was something of importance for the responding firefighters to know but could not hear due to the interference. Could have been a freebander's kid or possible one of the 300+ county firefighter's kid, one will never know.

>Theres that irrelevant Morse code test I would have to take first. I don't
>want
>to learn Morse code.

Morse Code is not irrelevent. It is required by law, ergo it is VERY
relevent.

Since you have made a concious decision that the effort required is not
worth the privileges you stand to gain, PLEASE stop your whining.

Steve, K4YZ

Okay... understand where you were going with that now.... I thought it was supposed to be some type of cb lingo like as in a variation to the 10 codes or something. My apologies, as I thought that was what you were referencing.

Yes, but the post said memorization, and nothing about techniques, until after the post, which would lead the average person to basically believe it to be word-for-word memorization. My statement still stands, that if someone can memorize (corrected) 665 questions and all four possible answers, they have my respect.

Wow.... they should up the number to at least 100 questions per testing level..... Every test I have taken in the fire service has had at least a minimum of 100 questions. The final exam for the firefighter 1 and 2 certification in Michigan has 200 questions and that is based on a pool of 1,500 questions..... (try memorizing that many!!!!!)

Is this under the assumption that one would have "some" basic knowledge
prior to "cramming" and then testing or is under the assumption that someone
without any radio knowledge (other than the am/fm broadcast bands)
whatsoever did this???

>Yes, they are split in the same percentages, whether or no they belong to the
>ARRL. That still does not change the difference between Hams and amateurs. I
>did not say Hams did not belong to the ARRL.

There is no difference between "Amateurs" and "Hams".

>It is not artificial distinction. The poll results show which areas Hams are
>most interested in. More Hams are interested in Antennas and CW than
>troubleshooting, electronics theory.

There is no "poll". You have tried this before and have failed to produce
the URL or other relevent reference of this vaporous document. It does not
exist, therefore any reference to it is untruthful. A lie.

>This is shown in the various surveys. The interests are further shown in the
>local clubs, their newsletters, and Hams at Hamfests in several states.

I'd ask you to produce those "surveys" and subsequently show me where the
division is drawn between being an "Amateur" and a "Ham" based upon them, but
since it's all a figment of your (weak) imagination, I'll suffice to accept
that you're just off your rocker.

>And there is an element of tradition in Ham radio....(SNIP)

As there is in NASCAR racing, aviation, stamp collecting, quilting, art,
dancing, music, etc etc etc.

Why is it that the ONLY avocation you seem to paint darkly over a
perception of "tradition" is Amatuer Radio, Vippy?

>For example, in code class,
>they not only teach the code, but the various "additional vocabulary" in the
>example paragraph.

As there is in NASCAR racing, aviation, stamp collecting, quilting, art,
dancing, music, etc etc etc.

Why is it that the ONLY avocation you seem to paint darkly over a perception of "additional vocabulary" is Amateur Radio, Vippy?

>These conventions are not required, yet some people have the
>desire to use them. These are <some of the> conventions of Ham radio, which
>mainly experimenters may not use.

How would you know? So far you've not presented us with one iota of "experimentation" carried out at KB1HMW.

>Some of the new EEs or hobbyists may be discouraged by the focus of most of
>the
>current clubs.

I'll not lose sleep over them being discouraged by what any one club may or may not like to do. I'll lose even LESS sleep knowing they have it in their power to create such clubs for their own interests. However based upon examples set by present company, I know that all that will be done is a bunch of moping and whining about "Morse Code".

Your mileage will vary, but I doubt it.

>Hams focus on contesting, CW, antennas. ARRL can expand the areas of
>experimentation.

QST (and certainly QEX) often present articles of interest on numerous "experimental" modes, techniques and technology.

ARRL is under no obligation to drag anyone into a dark basement corner and force-feed them "experimentation".

YOUR focus seems to be forcing others to participate in activities that YOU deem "appropriate" regardless of their preferences and to seeking out "preety fems". You are no doubt wonderstruck that they (preety fems) could be so crazy as to pass up a hot deal such as yourself.

As for what you perceive Hams to be focusing on, your vision of reality is very narrow. Have your eyes checked ASAP.

>
>Lenover21 seems to have alot of valid arguments. Just because you disagree
>does
>not mean the arguments are not valid.

Most of his arguments outside of his opinion that Morse Code testing is "archaic" ARE invalid.

Lennie's frequent rants on Amateur Radio itself, The ARRL in particular, and many individual Amateurs is based solely upon his LACK of practical experience in Amateur Radio, and are a direct result of his failure to "make a mark" in the discipline of radiocommunications that his ego feels he deserved.

For the most part, they have no basis in fact and are, for the most part, proven erroneous by reference to any number of alternate sources of information.

Lennie's "arguments" are centered around being the loudest kid in the classroom, the meanest bully, or the "rich kid" who thinks that his "superior upbringing" make him better than anyone else.

He routinely lies. He blatantly does NOT tell the truth. This is because the truth does not support his contentions about Amateur Radio in general or those of us licensed in it in particular.

If that were not enough to discredit this creep, his shameful and cowardly efforts to embellish his own lackluster military service record at the expense of men killed in action three years before he was even in boot camp should warrant him a place in The Loser's Hall of Shame.

You consider him "valid", Vipul? I guess that just tells the rest of us what your least common denominator is in the "morals and scruples" deaprtment.

>>> Careful now, Brian. Vipul will mark you as a cult member.
>>That guy has some "issues" well beyond ham radio.
>
>For what, observing that Ham radio is not for a certain group of EEs?

Oh really? There's an exclusionary clause in Part 97 for "a certain groups of EEs"...?!?! I'll have to check that out...

Or is that some membership rule of IEEE that refuses membership to EEs who possess an Amateur license? Do they have monitors who double check the FCC database against their own membership rolls?

>>One big advantage of the CQ is the number of expeditions which
>>get into it, lotta straight dxers go ape in the CQs and don't bother
>>turning in the logs, all they want is the cards.
>
>And this is not an example of a cult?

No...it's not. It's an example of guys collecting cards from far-off places. Absolutely no different than people who collect stamps or foreign coins...except they used a radio to do it.

>>Today there's a
>>lot of grousing about restricting single ops to 30 hours max per
>>contest.
>
>How can anyone do the same thing over and over again (like a contest)?

Every attempt is different. Different bands, different propagation, different distribution of effort.

Absolutely no different than marathon runners or NASCAR, except our "race track" is the electromagnetic spectrum, and you don't have to break a sweat or risk eating a retaining wall at 185 MPH to do it.

In the 2000 ARRL Sweepstakes I set goals for myself...a "contest within a contest", if you will. I tried to work all 50 states within 12 hours, and to get all 80 ARRL Sections within 24 hours, and do it with the absolute MINIMUM number of QSO's possible.

I had "clean sweeps" in both SSB and CW. I worked WAS in under 12 hours in the SSB weekend but not in CW (where in the heck were all the HI stations...?!?!) And I didn't make more than 151 Q's in either weekend. That was partially because of out-of-district calls (ie: answering a W1 hoping for NH, but finding out he was in LAX or OR) and working additional stations in sections I wanted to be SURE of.

Bottom line...?!?! I HAD FUN!

>
> That is an extremely biased "opinion" which is untrue as to the
> charges you've made.

No it's not.

I was there too. California is one of the most "government-protected"
places I have ever lived in. Think you can't handle some aspect of life? No
problem...The State of California will assume responsibility fo it and take
over managing your life for you.

They are so intent on "protecting" everyone's "right to [fill in the
blank]", that they've now made it almost impossible to do anything without
violating somebody's "rights".

As for taking care of people, I refer to IMS, or "Indigant Medical
System", a California program to pay for the healthcare of persons who claim
indigant status or refuse to get a job and earn their benefits.

I loved the beaches and I loved the high desert (especially the Owens
Valley, Bishop, etc), but I found precious little in between to warrant
surrendering my liberties or tax dollars to...

>Such "charges" are disproven by reading the area newspapers,
> listening/watching local broadcasting, attending City Hall and
> County Council meetings and hearing the debates. Such
> "charges" are untrue according to public police logs, several
> local health and medical service agency statements, the
> Immigration and Naturalization Service, local county sheriffs
> and California Highway Patrol.

Such charges are VALIDATED by spending a day on Trauma Call in any
hospital south of Santa Barbara, or by spending a day on a citizen ridership
program with the PD's that allow it, if any still do anymore.

I did. It's scary.

I also had an ambulance shot up while sitting in traffic in LA.

Guess this was just an "over exuberent" cultural expression?

>>By the same reasoning I'm sure California ACS works better
>>than ARES.
>
> I'm sure you think so...but we can all see evidence of how

As previously pointed out, the areas you cite have the tax base to support such preparedness.

>>But please understand that back in America we still rely on
>>ourselves instead of Government.
>
> I'm sure you do in that separate mythical nation that lives
> in your head.

We pretty much do that elsewhere, too. Most "emergency preparedness" in this part of the country is still conducted by local programs and volunteers. We don't have 12 million people packed into a relatively small geographical area to draw dolalrs from to create these programs for.

> California is still a State within the Union and citizens of this
> state are also very much citizens of the United States of
> America.

Yeah...the SAME state in which "Welcome To California...Leave Your Money, Leave Your Foot Prints, But Please, LEAVE" bumperstickers are popular.

> Yes, everyone in the United States of America has seen your
> mythical country's "reliance on self" from the seasonal
> hurricane disasters where all the commercial facilities "fail"
> only to be miraculously "saved" by hobbyists.

"Hobbyists"...?!?! Volunteer firemen, EMT's and Red Cross staffers are "hobbyists"..?!?! Because that's who does the bulk of the disaster work in THIS part of the country.

Oh yeah...A few thousand LICENSED Radio Amateurs who pitch in from time to time.

But AS USUAL, Lennie, your vision is myopic and your "facts" are anything BUT.

Nothing new from Lanark Street. Same disgusting lies and rhetoric.

Same PUTZ.

Did they use the same "weather rock" that some Navy weatherguessers used???

Bright Rock = Sunny

Dull Rock = Cloudy

Hot Rock = Summer

Cold Rock = Winter

White Rock = Snowing

Wet Rock = Raining

Moving Rock = Earthquake

Missing Rock = Hurricaine

Too bad Clinton DeSoto didn't have you around to keep him straight in
1936, eh, Lennie?

>The first ever radio membership organization is the Radio Club of
> America, founded in 1909

It wasn't the first...just the first to be as successful as it was (and is)

>The RCA (not to be
> confused with the old RCA Corporation) has a number of
> history items on its website that may be of interest to more
> broad-minded amateurs.

So do several other "non-Amateur" websites. Your point?

>Prior to World War One, the overwhelming type of radio trans-
> mitter of any kind...(SNIP)

Very interesting. Sounds like the same stuff from "200 Meters and Down".
But THAT can't BE...it's an ARRL publication.

>Let's face it, early radio technology was PRIMITIVE. Any
> improvement in construction represented a virtual plateau-
> jump in advancing the state of the art of that day.

As is any technical innovation in it's infancy. Ya gotta start somewhere.

>I wasn't there in 1896 or 1914 and didn't exist until 1932. My
> references are many and varied sources of information from
> the radio industry, academics, professional organizations and
> membership societies not concentrating solely on or about
> amateurism.

But...but...but...LENNIE! You have frequently trid to discredit many of MY
posts as a result of my age (ie: having not experienced something in the
first-person).

So that being one of YOUR rules, where do YOU get of by posting lengthy historical ramblings about things that happened WELL before "your day"...?!?!

Or is this yet another "Do As I Say, Don't Do As Do" moment?

>>Hey Len...stick to what you know....not a damn thing about Amateur Radio.

At least we ARE "involved"...Not just shouting from the bleachers.

>There are an unfortunate few US radio amateurs who wish an
> almost ultimate elitism and recognition for undeserved glory-of-
> accomplishment in a hobby endeavor and undeserved honors
> for achievement such to allow them to look down on others.
> That's the damning part.

Who are these folks, Lennie? What did they say that was untrue? Are these alleged achievements not verifyable by 3-party reporters or observers?

>>repeaters.
>
> BZZZT! Wrong answer, Dan. Sorry.

>Cellular telephones can be traced back to the first "handie-talkies"
> designed by Motorola back in WW2

The first "handie talkies" were pioneered by Amateurs BEFORE the war,
Lennie.

>ATT may have had the very first pocket-size paging receiver...(SNIP)

Pagers are related to cellphones?

>Today's "cell phone" owes its existance to several areas of
> technology: Development of efficient solid-state RF amplifiers
> centered on 1 GHZ; Very Large Scale Integrated Circuits of low
> power demand to handle all the digital functions and control
> needed in a single small IC package; efficient batteries and
> charging system to enable long use.

Todays "cellphone" has been the catalyst for the advancement of those
technologies.

And cellphones owe their existence to AT&T and other industries looking to
expand the coverage and reliabiltiy of the mobile telephone. More telephone
users meant more profits, and no one was going to pay the kind of money that
the old services could command for very limited coverage areas and intermittent
service.

>The very first ever television was already "slow-scan." Those were
> mechanical and their ultimate mechanical form was done by
> Scotsman John Logie Baird in the UK...(SNIP)

Isn't it a shame that you can "recall" all this trivia, yet you can't get
the "respect" you expect because you have a sewer for a mouth and acid for
personality, Lennie?

>Automatic Link Establishment such as on SHARES network...
> oops, sorry, that is government communications on HF, very
> little done in amateur radio

Since WHEN did you let something like "not Amatuer Radio" deter you from incorporating it into a rant, Lennie?

As usual...SOLDAISNDAID.

It seems to matter here. Please recall that if you don't have a
callsign, you have no voice concerning amateur radio.

> >My most frequently heard reaction to "ham radio" is, "Isn't that like CB?"

Correct. Mistakes and silliness on anyone's part do not translate to
your being obtuse.

You are a self-made obtuse man.

> Your guessing is my "obtuseness"?

You go on endlessly, but you really have nothing to say. Nothing of
substance anyway. You throw in talk of moving boxes, and places such
as snackbars, and we are left guessing to what you might possibly be
talking about.

> > > > > > > > > > And leave Ed out of this. He's absent by his choice, not anything I

No it's not a cult, some hams enjoy collecting QSL cards, some people
enjoy collecting stamps, are philatelists and coin collectors cultists
on your planet too? Beyond that nobody give a rat's ass if you think
these sorts of pursuits are cults or not.

> >Today there's a
> >lot of grousing about restricting single ops to 30 hours max per
> >contest.
>
> How can anyone do the same thing over and over again (like a contest)?

Easy. Get a good night's sleep, get up, scratch everything that
itches, turn on the radios, grease the paddles . . like baseball, get
up, scratch everything that itches, put on the uniform, step up the
plate . . Contesting is a *sport*, it's no more complicated than that.
And we do it over & over just like ballplayers do in their sport. If
you have a problem with that it's *your* problem, it is not the
contesters problem. See above wrt to your "issues".

more info sent from k1ki (arrl ne div director) to our club reflector:

<quote>
Here's your chance to help identify and remove some of the 10m "junk"...
Riley Hollingsworth has requested the assistance of the ARRL Amateur
Auxiliary/Official Observers in stepped-up monitoring and reporting of
interference from unlicensed domestic operation on 10 meters. He
specifically asks for reports of interference from "business entities
including trucking companies, truckers or other individuals."

Riley requests special attention to this problem for the next 6 months
(May - October). He indicates that the FCC will use the information to
identify the areas where such operation is most prevalent and work with FCC
regional offices on enforcement.

Even if you're not an OO, you can help out in this effort. Reports can be
sent to Chuck Skolaut/K0BOG (k0bog@arrl.org) and should include as much
detail as possible. Chuck will organize the data collected and send it to
the FCC.

Chuck suggests the following: date, time, frequency, and mode type (SSB, AM,
etc)and then listen for distinguishing operating characteristics such as
language used (English, Spanish and some use echo boxes), possible
identifying references to location and if mobile, such as truckers, possible
schedule and highway routes and truckline names and handles(names).
<unquote>

At his request I sent the following info to k0bog on my past monitoring of
these intruders in the hope that it would be passed on to the oo's to give
them some background and tips:

<quote>
K1ki said you might be able to use a summary of what I have learned about
10m truckers to pass on to OO's so they have a starting point. Below are
some listening hints and hot spots that I have heard:

Many of the radios they use are modified cb's. Because of how the
modifications are done there are some preferred frequencies. Apparently what
one common mod does is use a multi position switch that shifts the normal 40
channel dial up into the 10m band in a couple steps. In the 'down' position
it is the normal 40 channels. 'Up 1' click it puts channel 19 on 28085, and

'Up 2' it puts channel 19 on 28535. Both of those frequencies are the most common spots I have heard stateside truckers. They also frequent the range between 28105 and 28295 in 10kc steps. They almost always use AM though I have heard a couple of them trying FM and SSB (obviously using Ham equipment), though they don't seem to like those modes.

Most of the operations I have heard have been fleet truckers. They usually run in pairs on interstates or other major highways, almost always in sight of each other as they commonly point out landmarks and interesting sights to each other and stop for meals together. They also seem to be mostly on regular routes, often heard on the same routes week after week. It is often necessary to listen to a pair for quite a while to figure out where they are from road and landmark references, or some occasions they will mention warehouses and destination stores and types of cargo they are carrying, but not very often.

Because I am in the north east I mostly hear them from the south east or west of the Mississippi. Some common areas I have heard in the past were:
1. Stone/gravel/sand delivery dump trucks in the Pensacola Fl area. Relatively short hauls over local roads and I-10 in the Fla panhandle and into southern Alabama.
2. Target Stores fleet drivers in the AZ/NM/CO/UT/NV/s.CA area. Long hauls with several stops at stores in various cities. This was one of the few where the drivers actually discussed specific warehouses and store deliveries.
3. Cattle trucks from the Dakotas down to Oklahoma City or Kansas City area. These guys were on for long periods on what sounded like a very regular schedule.
4. Stone/gravel/sand deliver dump trucks around Rockwall Tx, north east of Dallas Tx.
5. Furniture manufacturer out of Alabama with trucks heading west through TX.
6. Random trucks going to/from New Orleans LA, Little Rock Ar, San Antonio Tx, Denver Co., Houston Tx, and many other cities.

Some other odd occurances and notes:
1. A drunk sounding operator usually using a callsign like 'unit 23' from Houston Tx on 28475 AM, usually in late after noon or early evening.
2. Extremely wide and distorted audio not quite copyable on AM up to about 28800 or so... You can sometimes make out the roger beeps and other birdie effects and the repetitious cb lingo. On many occasions I have found this to be caused by one or more stations saying they are from New Orleans La. or 'in the Bayou country'. Their actual frequency is normally 27085 or 27025 or in that range.
3. Wife to driver chats around 28675.
4. Many Spanish speaking stations, most probably South American but some possibly in the south west states. Some of the obvious stateside drivers I have heard seem to switch back and forth between Spanish and English.
5. Very rarely have I heard them above 28800.
6. They are almost always on 10kc steps on the 5's on AM, probably because of the common cb channel assignments and the rig modifications.

7. I have heard fishing boats in the Atlantic off the south east coast between 28310 and about 28330 on ssb, usually in the evenings.
8. There is lots of South American AM operation on 28305 and 28315, though they can be heard every 10kc from 28005 up to about 28325 when the band is open. I also understand there is a lot on those frequencies from Asia that is heard out west.
9. A quick way to find truckers is to set up a series of memory channels on the common frequencies and let it scan. Scanning 28085, 28535, 28525, 28095, and other 10kc steps from 28105 up to 28295 on AM would probably be the easiest way to find activity. Those close to major interstates and cities will probably hear lots more than those farther out these days.

(Un)fortunately with the reduction in solar activity over the last year or so I haven't heard nearly as much as I have in the past. And being relatively far from interstates up here I probably can't hear the low power ones in New England.

Getting rep's on the FCC is easy. All one need do is donate enough money or media time to the President's campaign, just like the commercial interests do. We do, after all, have the finest Government money can buy.

Some of you guys are clueless beyond belief. ITU regs spell out callsign
allocations to the various countries with prefixes beginning AAA through ZZZ
When the country needs, the prefix is followed by a numeric, then, also if needed,
suffix of AAA through ZZZ. Been that way for decades.
The FCC could legally assign AAA1ZZZ as an amateur callsign if they
wanted/needed to.

Cross-posted to: rec.radio.amateur.policy,misc.transport.trucking,rec.radio.cb

Oh my oh my, I can see it now, a fleet of bald tire wrecks
rolling all over the nation's highways and byways with large
cardboard signs duck taped on the side reading "Junior
FCC auxiliary trucker Radio Patrol." All intent on hunting
outlaw truckers. Said vehicles will have a minimum of eight
antennas mounted and a minimum of four obese pencil pocket
coke bottle lens white male geeks riding in each vehicle. Said
geeks will display hats with their call signs emblazoned on them,
call sign badges, a minimum of fifteen "ARRL member" stickers
glued all over the windows of the vehicles. Uniform for said geeks
will consist of food stained shirts and filthy trousers.
Additionally, said geeks will not be required to practice
bodily hygiene for a minimum of one week before leaving
on auxiliary patrol duties, including having not shaved for two
weeks. Word circulating among truckers is the greatest
countermeasure to the "geek patrols" is to have an
attractive young girl clad in a string bikini riding in one's
truck cab. Upon spotting the geek radio patrol, said
young woman will display her wears at the geeks. The
geeks, not ever having experienced the full attention of a
beautiful young woman before , will consequently lose control
of their vehicle and begin salivating profusely.

208. Aircraft Navaid QRM

Newsgroup: rec.radio.amateur.policy
Date: 2003-05-02 16:48:25 UTC
From: Jim Weir <jim@rst-engr.com>
Message-ID: <s785bvg8id8sabn551fk3beasfvrvie197@4ax.com>
Source record: 66409

I'd be interested in how you can get a 6 meter harmonic to interfere with a navaid.

Jim

k4yz@aol.com (Steve Robeson K4YZ)
shared these priceless pearls of wisdom:

-> Harmonics on 6 meters can also interfere with TV, broadcast and
->aeronautical navaids.

Jim Weir, VP Eng. RST Eng. WX6RST
A&P, CFI, and other good alphabet soup

I thought rue was a butter based sauce in French.

Ooops. Gotta go wash my mouth.

Those would be "aerographer's mates." They are highly trained - they
went through the Air Force weather school.

Weather rocks are great. But they are only good for "now-casting."
Find an AF trained weatherman if you want prediction.

Good point. Three letter prefixes are the only way they could issue more
calls without going astray of the ITU.

> hyt

I can see it now. Ratty old trailer with a dented old car sitting on a
jack at a crazy angle. Another
old 70's Pontiac rusted out under the doors and the requisite dents. And
when the feller drives
"hit", missing hubcaps and all, the motor misses on 3 of 8 cylinders
(FOOOMP, FOOOMP, FOOMP, FOOOMP!). Don't fergit the rebel flag in the rear
window behind all the batting that
has erupted behind upholstery long since faded and split like "mini"
mountains all across the
warped package tray. Don't fergit about them thar twin 'antenners' put
about 4' across the trunk,
or better, two whup-whups on the bumper because the pore feller has not even
a clue about the
term "co-phase". BUT he thinks 'hit' looks cool. "Bout as cool at the
'backer" juice staining the corners of his mouth and the snaggled, rotten

teeth. He cain't hardly feed them young'uns, but he
spent $400 fer that mobile "leenyar" in that rusty 'Pony-aack", and another
$300 for a modulator fer the one at home. He got a super "deal" down at
Bubba's CB Shop and Pool Parlor; time pay-
ments work wonders. He'll argue, whilst his listeners dodge "backy' juice,
spewing (pun intended)
forth his "knowledge" about the "raht" length fer his coax; truth is, he
knows as much about a
chicken band 'reddio' as them chickens his wife has to keep shooing out of
the trailer. Heck, she
should let 'em come on in; them chickens might gid "atter" some roaches in
'ere. ....

Anyone can stereotype another. I have found that, for the most part,
Amateurs are pretty average
and most intelligent. If you can label one group, out of that group, you
can find an equal number
of the types you describe; nerds, truckers with ponytails, Harley belts,
leather jackets with rebel
flags, pocket holders, unkempt, thick glasses, disheveled, etc. OTH, I meet
many truckers AND
hams who dress neatly, are polite, can engage in intelligent, erudite
conversation, and are----well--
--just folks. It is just as to easy to label one group as another, like I
said.

WRT the issue of truckers operating on frequencies that are assigned to
others, it's almost funny.
That ham that *may* have an odd--looking antenna likely is just as
non-descript as any other
vehicle, and the "poor" driver would never know he's been fingered until his
employer received
a letter of warning. It may be funny to you, but it is NOT funny to the
driver who has to explain
why he is operating illegal equipment. Drivers have fired over this, and
you think it is a joke?

The bottom line is, those drivers who operate on frequencies not theirs are
wrong to do so and it is patently illegal. The rightful users of the
frequencies you take so lightly as if you had a "right" to anything you
please DON'T think it is funny. And those "nerdy" hams that do monitor (but
then Cbers have no concept of self-policing) THEIR bands will continue to
attempt to protect that which
belongs to THEM. Like it or lump it, that vehicle you see following you
may or may not be recording your conversation, and Mr.Hollingsworth will
follow up on it. Stay tuned.. there's more
about to get a surprise.

SSTV is not the antique technology of pre vidiocon flying spot scanners.

Amateur REPEATERS, not handi talkies, is what I was refering to. It showed
that linking could indeed work.

As for QST....There hasn't been anything technical there in 20 plus years.
That I agree with you on.

Tell you what Len....give me a chance to get a copy of that 'fact' program
you have and we can copy and past into the gigibit range.

Dan/W4NTI

I just don't agree with the madness about scarfing up short or 'good contest' calls. As for you intentions, no problem. Its the rules now and Im just expressing my opinion.

As for the call of ASS and FUK....until recently those calls would NEVER HAVE BEEN ISSUED. It was policy to NOT issue those sort of calls. So until now it wasn't a problem.

I know folks that asked for KKK in the suffix. Kinda assinine in my book. But it wern't mine... hi.

I have had several chances to change to a shorter call. I don't like the 'I' on the end. Its a problem in contesting. The 'I' gets dropped by qsb/qrm too easly on CW. But I don't think Ill change.

>What could be any possible reason for envy of a hobby?

Vipul, to see where Carroll is coming from you need to experience his "arguments" in this forum going back at least four years.

Carroll is a another pridefull PCTA who doggedly sticks to the Established Order and feels qualified to flatly state his opinions as being the Only Truth. [that seems to be endemic with PCTAs]

Carroll has had a number of arguments on various subjects with various participants in here and could not sustain his viewpoints on technical subjects. [those who live in the past can go back to Google and see the play-by-play with Cecil Moore on antenna technicalities or two others on Shannon's Law...or myself on the LAPD supposedly tied into a "nationwide manual telegraphy network" claim]

Carroll generally lost every argument on technical and historical subjects so he resorted to the personal insult attack. He seems to now be in a perpetual personal attack mode. This time he goes into the My Opinions Are The Only Truth mode...namely anyone who does not agree with him therefore "hates ham radio" and is probably stupid and ignorant as well. :-)

PCTAs are passionate about the Established Order being maintained at all costs. Requiring morse code skill of each and every ham is part of the Established Order. Amateur radio licensees who did not test for morse code are put down as inferior beings unworthy of civility who cannot reason.

The most militant of the PCTAs demanding absolute adherence to the Established Order is the Gang of Four (Heil, Miccolis, Robeson, Roll) in this forum. Roll has been absent lately and Kelly has taken his place. It may be that Carroll is striking for

a place on that Gang now.

The prevailing opinion of those demanding absolute adherence
to Established Order is that anyone showing any disagreement
with Established Order is an automatic "hater of ham radio"
and possibly "envious" of their nobility in a hobby activity. :-)

There is NO debate possible with such passionate EO nobility.

>does not mean the arguments are not valid.

There shall be NO arguments against the Established Order.

Dee represents the Established Order.

All arguments against the Established Order are therefore invalid.

Anything against the Established Order are "totally unrelated tangents."

That pretty well sums up the attitude of the PCTA. :-)

Try to keep up. Len wrote of moving boxes and supply depots. It
wouldn't matter much what was written by whom. You'd still be left
guessing.

seem obtuse to a guy with a reading comprehension problem.

It's easiest to do on line. Go to <www.fcc.gov/wtb/uls> and
follow the instructions. You want to make an Administrative
Update.

Are there really only a couple people here who do public service? We only got a few comments on Ryans thread.

How about we spice it up a little, and try finishing this sentence:

I don't do public service because:

Mike> I don't do public service because:

* I don't have a good location.
I have yet to get my HF rig to work at home due to interference and
being stuck in a narrow valley between two high ridges. My wife
chose the apartment before we got married and she's not a ham.

* I don't have good equipment.
My VHF stuff is limited to running xastir on a 5W HT. A bit more
money and time, and I'll have a good APRS station that can run off
battery for 48hrs, but that's not now.

* I don't have any training.
I haven't yet spent the time or the money to take the ARRL courses
or to work with local volunteers on ARES and RACES operations.

Luckily for me, all three of those problems can be solved over the
course of a year or two, given enough stability in the rest of my
life. Maybe I'll have a different answer next year.

Jack.

In article <b8uaebgpt1@slb9.atl.mindspring.net>, "Dan/W4NTI"
<w4nti@NOSPAMmindspring.com> writes:

>SSTV is not the antique technology of pre vidiocon flying spot scanners.

"Vidicon."

I wasn't talking about "flying spot scanners." "Flying spot"
imaging was used by WREX-TV in 1956 in their film and
slide chain. Kinescope to generate the "spot," photomultiplier
to pick up the "spot" after it passed through film. Made by
DuMont.

You can check out a number of sources on all NASA space
missions...at NASA's own website or in many different
publications available in libraries or at low cost from the US
Government Printing Office. Lots of electronic industry links
on the history, techniques, details of all NASA cameras and
photoimaging. Not a single one of them was designed by
amateur radio activity as you claim.

Over a year ago a prominent off-shore designer and maker
of amateur radio equipment debuted a portable camera and
color display that was designed to work with their existing
line of VHF-UHF handheld FM transceivers. It could
transmit images in a slow-scan rate using digital protocol
very similar to what is done on computers today handling
JPG format images. Bandwidth was only 3 KHz, same as
normal voice requirements. Did not seem to enthuse US
radio amateurs at all since sales were considered dismal.

For several years (at least 5) there have been small cameras
available as peripheral items for personal computers and that
market has expanded into security monitors, some available
for wireless linking. I've seen nothing in amateur publications
on using such now low-cost cameras with adapters to
couple to amateur radios. You are free to expand on that to
show they ARE being used.

>Amateur REPEATERS, not handi talkies, is what I was refering to. It showed
>that linking could indeed work.

The US Army Signal Corps did that in Europe in WW2 using
AN/TRC-1, -3, -4 radio relay equipment. From the Italian
Campaign on past the Battle of the Bulge. Unattended
repeatering of 12 KHz bandwidth FM on VHF.

In the late 1940s through 1950s, US military VHF portables
(AN/PRC-6, AN/PRC-8, -9, -10) were specifically designed
to operate (using a supplied adapter) in the field as unattended
repeaters. That is described, illustrated in their TMs.

>As for QST....There hasn't been anything technical there in 20 plus years.
>That I agree with you on.

I beg to differ with you. The recycling of used tuna cans into
high-tech two-transistor transmitters represents an
advancement in the ham state of the art...as most hams
know it.

>Tell you what Len....give me a chance to get a copy of that 'fact' program
>you have and we can copy and past into the gigibit range.

Do your OWN homework, grasshopper. There are many, many,
many sources of information. You are free to call ALL those
non-amateur-radio-oriented sources by any names you want.
That doesn't change history at all.

Stick with APRS in recent times and radio communication with
Antarctic polar expeditions before WW2, running phone patches
for "our boys overseas" before the first Gulf War. Beyond that
few will believe you.

>
>> Cellular telephones can be traced back to the first "handie-talkies"
>> designed by Motorola back in WW2
>
> The first "handie talkies" were pioneered by Amateurs BEFORE the war,
>Lennie.

No. The radio-electronic industry history credits Motorola with that,
including the name "handie-talkie." "Walkie-talkie" was applied by
Motorola to their SCR-300 backpack portable VHF radio but Motorola
failed to secure a trademark due to all the exposure in the news
media using "handie-talkie" and "walkie-talkie" in print for those
radios.

The military handie-talkie of WW2 was designed specifically to
augment and replace the pre-WW2 multiple-halversack-sized
US Army man-portable radio. The hand-held walkie-talkie could
survive the harsh environment of the battlefield with solid
communications over short ranges (under 5 miles).

Motorola's SCR-300 walkie-talkie, designed by Dan Noble, was
a technology plateau-jump in state of the art, operating at VHF
using FM and having manual tuning for both receiver and trans-
mitter (integrated for the same air frequency) and with capability
of checking/marking/adjusting tuning from a built-in quartz
crystal calibrator. Noble had previously been instrumental in
designing the first of the mobile FM radios for public safety
services and is recognized as a pioneer in that by the IEEE
Historical Society. Following the successful operation in the
field during WW2, the basic SCR-300 design was copied
almost outright by several international militaries, including
the United Kingdom, West Germany, and Norway.

>>ATT may have had the very first pocket-size paging receiver...(SNIP)
>

> Pagers are related to cellphones?

Yes. The first paging systems were operated by the Bell System
in the United States. Bell Labs may have been the first to design
a pocket-size paging receiver; it was certainly the first to widely
publicize its technical description in detail [Bell System
Technical Journal in the early 1960s, BSTJ is a monthly
periodical].

The first paging receiver use was to alert users to access a wired
telephone. Later, after radio service creation and expansion by the
FCC, private paging services grew and prospered in urban areas
of the USA. The main use of pagers today is to alert users to
access a telephone number; the only difference is that now the
number to call may be sent over the pager as well as short
messages.

>> Today's "cell phone" owes its existance to several areas of
>> technology: Development of efficient solid-state RF amplifiers
>> centered on 1 GHZ; Very Large Scale Integrated Circuits of low
>> power demand to handle all the digital functions and control
>> needed in a single small IC package; efficient batteries and
>> charging system to enable long use.
>
> Todays "cellphone" has been the catalyst for the advancement of those
>technologies.

Incorrect. The only "catalyst" was overall industry MARKET
DEMAND for higher transistor transition frequency, VLSI, and
battery technology. That applied to ALL areas of electronics.

The small, lightweight cellular telephone handset of today would
not exist without market satisfaction of earlier portable telephones
which were much larger and bulkier.

> And cellphones owe their existence to AT&T and other industries looking
to
>expand the coverage and reliabiltiy of the mobile telephone. More telephone
>users meant more profits, and no one was going to pay the kind of money that
>the old services could command for very limited coverage areas and
>intermittent service.

Despite industry and Census figures indicating one in three citizens
having cellular telephone subscription in the USA, a higher
percentage of citizens have wired telephone subscriptions. The USA
has ranked high internationally on per capita use of telephones since
before WW2 days.

The "cell" structure of many low-power cell sites is a concept that is
actually international. Foreign countries have taken to that concept
as readily as the USA. We differ from "them" only in the electronic
format of voice-data communication. Nokia of Finland is a leading
designer and maker of cellular telephones, cell site equipment.

The USA has permitted private corporations to operate the civilian
telephone system. Private corporations exist to make a profit on
services rendered. Profit making by businesses is not some
implied evil...except to socialists who want everything free to
them because they cannot make much profit on their own.

>> The very first ever television was already "slow-scan." Those were

>
> Isn't it a shame that you can "recall" all this trivia, yet you can't get
>the "respect" you expect because you have a sewer for a mouth and acid for
>personality, Lennie?

The written history of the radio-electronics industry is available to
any who wish to access it. There are lots of sources. None of the
sources are located in any "sewer."

As to the charge of "acid," that is subjective, used by those with
limited knowledge of the overall history of radio and electronics.
Or, it may be charged by Believers in the Existing Order where
their entire radio history input is from a single source that spoon-
feeds them knowledge on what the source thinks they should
know.

>> Automatic Link Establishment such as on SHARES network...
>> oops, sorry, that is government communications on HF, very
>> little done in amateur radio
>
> Since WHEN did you let something like "not Amatuer Radio" deter you from
>incorporating it into a rant, Lennie?

Irrelevant. The history and organization and experience of the
US government SHARES is public knowledge. So is the Federal
Standard on Automatic Link Establishment. ALE permits real-
time adjustment of link frequencies and data transmission rates
plus error detection and correction of data. ALE was originated
for HF radio use.

The only amateur (not "amatuer") radio activity concerning ALE
use seems to be located on the website "Tactical Systems"
originated and maintained by a female radio amateur in mid-
California. There may be other such websites.

>1,500 questions..... (try memorizing that many!!!!!)

Present-day FCC regulations on written testing requirements
specify a MINIMUM of 10 questions in any question pool for
all written test elements. [ref: 97.523 since at least 1995]

The FCC does not originate the question pool, representatives
of Volunteer Examiner organizations do that. The VEC Question
Pool Committee originate all questions and answers. The FCC
merely approves or disproves VEC QPC pools. All question
pools are public knowledge when approved for use by the FCC.

There is NO maximum number of pool questions. 97.523
clearly states all written test elements shall have "at least 10
times the number of required [by the FCC regulations]."

The VEC QPC could originate 11, 12, 15, 20 or any number
greater number of required questions within the law now or
8 years ago.

With today's easy electronic transfer of data and personal
computers capable of storing vast quantities of data and then
randomly selecting the required number of test questions,
there is no problem to having a very large question pool.

There would be some extra work required by the VEC QPC
on pools larger than the 10-times number now done. That will
not impact either examinees nor the VEs administering the

written tests; the number of required written test questions remains the same, examinees would answer the same number of questions and VEs would score the same number of questions.

Doubling or tripling the question pool quantity does two things: A larger pool quantity makes it more difficult to memorize and allegedly "cheat"; a larger quantity for random selection of the same required question quantity increases probability of uniqueness in each written test, again lessening alleged charges of "cheating by copying another's test."

No changes in US amateur radio regulations are required to increase the quantity of question pool questions. There is little impact on any additional work by the FCC; new question pools are generated approximately once every two years. There is additional work imposed on the VEC QPC.

Its a lot like playing charades through text, where what is meant and
what is typed are not the same thing. It requires a certain amount of
guessing.

David, the "things" aren't obtuse. Their meaning is merely obscured
by your obtuseness.

> > > > > Which portion does your partial sentence comment address, Brian--the

Nope. But I like to work outside my "role" once in a while.

The reason I haven't chimmed in...is that I get tired of the smart assed replies from 'certain folks over 21'.

But....I have been involved with most phases of Emergency Comm since Ive been a ham. Over 40 years. Even while overseas in the Military I was involved in MARS when possible.

Stateside I check into the local traffic nets nightly. I operate the Vhf nets in wx watches as needed and just normal checking in. I am net control on the Alabama Section Net one night a week, and I am in Air Force MARS and am active in their emergency comm drills.

He discards all analogies and other illustrations from related fields. He only allows himself to use analogies. He quotes non-existent documents and/or misquotes them (one can easily check many of his so-called sources).

He then proceeds to develop his argument into a chain that ends up on a totally different aspect than the initial discussion and claims that unrelated topic that he finally gets to proves or disproves the initial premise when it is not even related.

I was a member of our high school's debate team and had formal training in debate techniques. Len Over 21 has yet to develop a logical, coherent dissertation that supports whatever point he is attempting to make. In general it is impossible to even figure out what he is trying to prove.

Some questions are similar but a lot are not. Every band limit question and every antenna question (as examples) must have each one individually memorized as the "wrong" answers look too much like the right answers. Even allowing for the fact that some questions are indeed quite similar, 384 is still too many to do in one day without prior preparation.

According to the book, "Morse Code, The Essential Language" one can achieve 5wpm in 30 hours of study if an effective study method is chosen. Of course some people learn much quicker. My older daughter learned it in a week spending not more than an hour or so per day. It took me longer but so what.

That is a bit of a nuisance for sure. I like to put some relevant stuff in here from time to time - call it spring cleaning. When all the posts become p*****g contests between ol' he who I won't name, and others, it is pretty dreary.

He isn't trying to prove anything. He is trolling, and this is a very
well stocked pond.

Actually there are three letter prefixes in use. They just don't happen to
be assigned to the amateur radio service. I was a MARS operator for a short
while. That's one of the services that gets assigned a three letter prefix.

writes:

>> No way. The ARRL helps and represent all licensed
>> radio amateurs, whether or not they become a member.

That's true if and only if an ARRL action helps amateur radio in general.

> Even as an ARRL member, I'm not totally convinced of that. I'm not even
>convinced ARRL always fully represents their own members.

All depends on the issue. Take the issue of keeping your callsign when moving
between districts. For hams who move a lot, it can be beneficial. For hams who
like the idea of being able to tell where another ham is just by the callsign,
it's not.
>
>> ARRL acts for Hams when the Hams themselves are
>> unable to. The other 75% are an unorganized group.
>> Acting on their own, the other 75% will not be as
>> effective and will weaken the ARRL's position.

I disagree.

The main reason for an organized group is to do things that individuals would
have a hard time doing. Consider the issue of using power lines for highspeed
data, as discussed in another thread. How many hams have the technical
expertise, skills, facilities and time to prepare a well-researched report on
the possible impact of that technology on amateur radio communications? How
many will actually do the work and present it to the FCC in a timely fashion?
Not many - but ARRL will do it.

> I would really like to see an alternative to the ARRL. Clearly, one
>organization cannot fully represent the diverse views of an entire
>population group.

That's true of any diverse group dealing with complex issues.

Note that the ARRL leadership states its position and the reasons for them, but
also encourages all interested parties to make their positions known to the
FCC.

>Furthermore, a second organization might strengthen our
>representation. For example, when the two agree, having a second
>organization back your position always strengthens that position.

Agreed.

>But, where
>hams disagree, they should have an alternative organization to represent
>their views.
>
There have been several alternative amateur radio organizations over the years. All have focused on a few issues, gotten some recognition and a few thousand members, and then faded away. ARRL's 25% membership is a much larger percentage than any other American amateur radio organization can claim.

In article <qSCsa.2730$3f7.2195658@newssvr28.news.prodigy.com>, "Dee D. Flint" <deehays@qix.net> writes:

>According to the book, "Morse Code, The Essential Language" one can achieve >5wpm in 30 hours of study if an effective study method is chosen. Of course >some people learn much quicker. My older daughter learned it in a week >spending not more than an hour or so per day. It took me longer but so >what.

According to the Armed Forces of the United States, morse code cognition is of such a limited aptitude in the "average" person that they kept a morse code aptitude test in the bank of recruit tests for two decades...1940s on through to at least 1960.

A better question, more related to "saving the Novice Class license" title of this thread is WHY have a morse code test at all?

In US amateur radio, Novice Class examinations have always required morse code testing. At the same time, the Novice Class license numbers have steadily decreased for years. The decrease in license numbers was so much and for so long that it was obvious to all who bothered to examine that Class. The FCC dropped the Novice Class from any new license grants following the recent restructuring.

Another question, again more suited to the subject thread, is WHY "save" the Novice Class?

The only US amateur radio license class that kept growth in US amateur radio license totals was the no-code-test Technician Class. Since its inception as a class in 1991 the no-code-test Technician Class kept the total of all US amateur radio licensees on a slight increase. Without that class, US amateur license numbers would have dropped between 1991 and now.

In article <nPCsa.2727$3f7.2194912@newssvr28.news.prodigy.com>, "Dee D. Flint" <deehays@qix.net> writes:

>Who determines the status of the people answering the polls. Hams and >amateurs ARE THE SAME THING. You and only you make any distinction.

Incorrect. Many of us do make the distinction.

According to the official ARRL website fount of amateur radio knowledge, "ham" was a derogatory name used by professional morsemen to identify amateurs in early radio days.

Any butcher can define "ham" as the butchered meat of swine, which it is. Such ham is often the main course in holiday meals across the USA. The meat of swine is forbidden in some religious beliefs, therefore calling an Israeli radio amateur a "ham" might be considered an insult if not incongrous.

ARRL publications often state occupations of amateur licensees with a preceding "ham-" as in "ham-astronaut." Should there be a respected actor with an amateur radio license, ARRL would identify them as "ham-actor," a definite personal insult!

ARRL style of identification with hyphenation implies that an identified individual placed overdue emphasis on amateur radio. For example, astronauts have spent years of personal dedication in more than one technical endeavor to enter the astronaut ranks. It is quite unlikely that any of them would personally place more importance on amateur radio than their years of striving, work, and dedication in and for the space program. Most of the current US astronauts possessing amateur radio licenses did so as part of NASA's overall public relations effort and have been granted no-code Technician Class licenses. That license was just one of a great number of astronaut work tasks during space training. NASA neither uses, relies, or plans on amateur radio use of any kind for actual space missions; amateur radio activities in space travel is really one of public-awareness tasks to publicize NASA's overall image.

Heh heh heh...which means I do not stick solely to ARRL
publications as references.

>I was a member of our high school's debate team and had formal training in
>debate techniques.

Much of the "debate" in here is at middle or grade-school level.
:-)

"Formal debate" requires a moderator, always has. There is
no such moderator here.

This forum is certainly NOT any "formal debate" venue. It is more
like an old professional wrestling tag-team match. :-)

>Len Over 21 has yet to develop a logical, coherent
>dissertation that supports whatever point he is attempting to make.

You aren't exactly a bundle of formalcy yourself, Dee. :-)

In fact, based on previous Sysop experience on Bulletin Board
Systems, this posting of yours is a rather fine example of
emotionally-driven arrogant posturing of superiority that is all
denigration without reference.

You've made a lot of "charges" of some kind of improper conduct
in here, yet you haven't referenced a single one of them, haven't
named those "non-existant references" I'm supposed to have
listed. You've stated a number of gross generalities that can
only reference your own personal pique.

>In general it is impossible to even figure out what he is trying to prove.

I would suggest you forgo all the "formal debate training in high
school" topic and go back to your high school for some formal
training in English Comprehension.

English Comprehension is not an overly difficult subject. All
students are required to overcome their own emotionalism and
personal biases as a prerequisite to such a course. Average
people should be able to complete it in only 30 days.

Ryan:

Call sign districts are simply geographically-based assignments of the
call sign "number." The original intent was to identify the operator by
geographical region within the U.S. and it's territories/possessions while
operating. The Vanity Call Sign system scrapped this useful feature, and
now the "district" numbers are essentially meaningless, since any ham
in any district can request a call sign including a number from an entirely
different district. Personally, I would not have permitted this.

Therefore, to answer your question, there is no need to do this. It would
serve no practical purpose. Moreover, in an era when the FCC has had to
resort to the extreme measures taken in Restructuring in order to streamline
the administrative burden of the ARS, this would only serve to add cost and
complexity it cannot afford and doesn't need. "Redistricting" the call areas
to reflect demographic shifts is of no value to the ARS, since all licensees
are already treated equally as radio amateurs. The ARRL already has a
system in place to address demographic changes among the ham population;
it creates new Sections to reflect increases in regonal ham populations.

Nice try; next topic, please. Keep going, though, you're on the right track.

Well, yes , I did know that. This goes back to my point about the FCC
issuing the wrong format of calls for quite a number of different
services. The trouble is, on the ITU level, those calls **do** belong only
to either amateur or experimental use, which MARS doesn't quite fit into.
Still, it will be a while before ham radio needs them in the US. My bet is
the first ham call with a three letter prefix will begin with 'JAA'.

"Us"...?!?! Who would that be, Lennie? More spoiled brat "engineers" who think thier "life experiences" makes then too good to take the same tests that every other citizen must take, such as yourself? Or those spoiled brat "engineers" like Vippy who can't seem to decide which offends them more...Not enough "preety fems" or the presence of radio hobbyists who want to have some fun with radios, not just eat, sleep and breed inside an O-scope?

>According to the official ARRL website fount of amateur radio
> knowledge, "ham" was a derogatory name used by professional

>Vipul, to see where Carroll is coming from you need to experience
> his "arguments" in this forum going back at least four years

Whew...Lennie just opened a BIG box of worms!

>Carroll is a another pridefull PCTA who doggedly sticks to the
> Established Order and feels qualified to flatly state his opinions
> as being the Only Truth. [that seems to be endemic with PCTAs]

Anderson is a prideful ex-radio technician with dubious qualifications
other than his ability to cut-and-paste and plagiarize the works of others. He
feels his years of "professional" electronics places him on a pedestle that no
mere "morseman" dare approach.

>Carroll has had a number of arguments on various subjects with
> various participants in here and could not sustain his viewpoints
> on technical subjects. [those who live in the past can go back
> to Google and see the play-by-play with Cecil Moore on
> antenna technicalities or two others on Shannon's Law...or
> myself on the LAPD supposedly tied into a "nationwide manual
> telegraphy network" claim]

Lennie has had a number of arguments on various subjects with various
participants on POLICY matters and could not sustain his viewpoints. This is
immediately evident by his resorting to such adjectives as "jackbooted thug",
"elitist", "morsemen", etc, when he can no longer "civilly debate" the topic he
thinks he is master of.

>Carroll generally lost every argument on technical and historical
> subjects so he resorted to the personal insult attack.

This must be based on Lennie's "newsgroup message points" system that he
frequently refers to but never publishes. I dare say that he would find
himself falling prey to his own devices as he so often does.

>He seems
> to now be in a perpetual personal attack mode.

Pot. Kettle. Black.

>This time he
> goes into the My Opinions Are The Only Truth mode...namely
> anyone who does not agree with him therefore "hates ham

> radio" and is probably stupid and ignorant as well.

Pot. Kettle. Black.

>PCTAs are passionate about the Established Order being
> maintained at all costs.

Lennie's as equally passionate about destroying anything that he can't
bring to it's knees in honor of himself.

>Requiring morse code skill of each
> and every ham is part of the Established Order.

One more item to heap onto the "Waiting For Lennie To Provide A Quote"
pile. And it's a BIIIIIIIIIG pile!

>Amateur
> radio licensees who did not test for morse code are put down
> as inferior beings unworthy of civility who cannot reason.

Other than Bruce Beynon (and everyone KNOWS that creep is a loser of
monumental proportion), WHO makes such assertions, Lennie?

Until you provide a quote otherwise, I will heap THIS one on the pile for
you to get started on too...

>The most militant of the PCTAs demanding absolute adherence
> to the Established Order is the Gang of Four (Heil, Miccolis,
> Robeson, Roll) in this forum. Roll has been absent lately and
> Kelly has taken his place. It may be that Carroll is striking for
> a place on that Gang now.

Hmmmm....can't get his way, so now we make an analogy to the infamous
"Gang of Four" of the Chinese cultural revolution. This should as quickly seal
the fate of a rant as does one's propensity to make references to Hitler.
Ooooops....Lennie's already done THAT, too! Doesn't give him much room to
maneuver!

>There is NO debate possible with such passionate EO nobility.

Naaaaw...We just don't like "debating" with a known punk and pathological
liar such as yourself.

Don't take offense, Lennie...We just play off of the stuff you
provide...And you make it sooooooooooooo easy.

> 1960.

Where is this stated explicitly?

The "Armed Forces of the United States" used those aptitude tests to find the
recruits who would be easiest to train to the skill level they required. The
required military skill level was far, far above the 5 wpm amateur radio code
test.
>
> A better question, more related to "saving the Novice Class
> license" title of this thread is WHY have a morse code test
> at all?

Many reasons have been given on both sides of the debate. They all boil down to
opinions.
>
> In US amateur radio, Novice Class examinations have always
> required morse code testing. At the same time, the Novice
> Class license numbers have steadily decreased for years.

In US amateur radio, Technician Plus Class examinations have always
required morse code testing. At the same time, the Technician Plus
Class license numbers have steadily increased from the introduction of that
license class until its being closed to new licenses in April of 2000.

In US amateur radio, Extra Class examinations have always
required morse code testing. At the same time, the Extral Class license
numbers have steadily increased from the introduction of that license class.

> The decrease in license numbers was so much and for so
> long that it was obvious to all who bothered to examine that
> Class. The FCC dropped the Novice Class from any new
> license grants following the recent restructuring.

The FCC also dropped the Technician Plus and Advanced Class from any new
license grants in the same restructuring.
>
> Another question, again more suited to the subject thread,
> is WHY "save" the Novice Class?

There's no clear reason to save it, because the Technician and Techncian Plus
classes of license have been the choice of most new US radio amateurs since the
1980s.
>
> The only US amateur radio license class that kept growth in
> US amateur radio license totals was the no-code-test
> Technician Class.

Incorrect.

> Since its inception as a class in 1991
> the no-code-test Technician Class kept the total of all
> US amateur radio licensees on a slight increase. Without
> that class, US amateur license numbers would have
> dropped between 1991 and now.

Incorrect. Here's why:

The above 'alternate history' statement assumes that none of those who obtained
Technician Class licenses after February 1991 would have done so if that
license had not lost its code test. That is clearly incorrect.

For proof, we need only look at the growth in US amateur radio for the past 33
years:

US Hams:

1970: 270,000
1980: 350,000
1990: 514,000
2000: 680,000

Growth Rate:

1970 to 1980: 29.6% (120,000 net growth)
1980 to 1990: 46.8% (164,000 net growth)
1990 to 2000: 32.2% (166,000 net growth)

Oddly enough, percentage growth slowed down after the introduction of code test
waivers and the Tech lost its code test. The total net growth in the '90s was
almost exactly the same as in the '80s, even though the US population was
larger.

As a percentage of the total US population:

Year - US population/annual growth - US hams - % hams
1970: 203 million 270,000 0.133%
1980: 227 million 350,000 0.154%
1990: 249 million 514,000 0.206%
2000: 281 million 680,000 0.242%

US hams as a percentage of population increased 0.021% in the '70s, 0.052% in the '80s and 0.036% in the '90s. So the growth slowed down after the introduction of code test waivers and the Tech lost its code test.

It stands to reason that if code testing were an 'unnecessary, arbitrary, and distasteful (to many) barriers to entry', those who were interested, but dissuaded by those unnecessary barriers would "jump in." when the 'barriers' were eliminated. Except that's not what happened, in either absolute number of hams or percentage growth. Growth in total hams was almost exactly the same during the '90s, compared to the '80s, and the percentage growth actually dropped.

Of course when the "price" of something drops, there is usually an increase of "sales". When the "price" of a US amateur radio license (the tests which must be passed to obtain one) was "dropped" by eliminating the code test for one class, that class attracted many "sales". This in no way proves what would have happened without the "drop in price".

Since the closing of the Technician Plus to new licenses in April 2000, FCC has been renewing all Technician Plus licenses as Technician, causing the latter class to grow and the former to shrink.

>N2EY> to tell where another ham is just by the callsign, it's not.
>
>Both sides can be happy here. Come to California and operate with
>"N2EY/6". You can keep your callsign and let hams know where you are.
>
Two problems with that:

First, adding the "/6" eliminates most of the advantage of the short call.
Might as well get a 1x3 or 2x3 6-land call.

Second, it only works for those working stations who choose to add the
designator.

Steve, you sure have nailed that one. In the instant case, Putzie's rant about
the
LAPD never having had a radiotelegraph station on the national police HF net,
I offer the following as evidence that he remains just as full of crap as ever.
Cluelessness such as his is almost criminal. He claims knowledge which he
clearly never had. If he's so wrong in this case, how can he be believable in any
area?

The 1945 issue of the Associated Police Communications Officers Handbook
shows Los Angles PD as operating *TWO* licensed radiotelegraph stations on the
Interstate Police HF net, with the call letters of KGPL and KGHX. At that time they
were the ONLY radiotelegraph stations in the state of California which were on the

net . CHP Sacremento is shown as having wireline teletype service only, and they received relayed traffic off the radiotlegraph net from LAPD!
Notice is made that the second station, KGHX, is a "zone" station.That would be for local (with in the state) use.

By the time of the printing of the 1951 issue of the APCO manual, FCC had changed the system of alloting callsigns, and the 1951 manual shows LAPD with *TWO* radiotelegraph stations, both licensed for the same usage, one with the callsign of KMA89, the other KMC90, both operating on Channels A through I, which were the following frequencies:

Channel Frequency
A- 2804 kc*
B- 2808 kc
C- 2312 kc
D- 5195 kc*
E- 5135 kc
F- 5140 kc
G- 7935 kc*
H- 7805 kc
I- 7480 kc

* denotes a calling frequency. Once contact was established stations moved to one of the other "working" frequencies.

By this time (1951), CHP Sacramento had installed a HF radiotelegraph station on the net with the assigned callsign of KMA25.

This interstate HF radotelegraph usage continued, though activity dwindled through

the 1960's, until the net was deactivated in the early 70's, at which time the primary east-west HF relay station at Flagstaff, Arizona was deactivated.
(I was a part of the technical crew that removed all the HF radio equipment from the Missouri State HF radiotelegraph relay station in 1975. There were 9 district stations throughout the state that had been deactivated previously in late 1965 after Missouri installed a statewide wireline teletype system.)

LAPD was listed as a contact point for the state of California in-state wire teletype
net, as was KMA25, CHP Sacramento.

Both of the APCO manuals noted are in my possession. Quotatations are direct from them.

It might be of interest to mention that the 1951 APCO handbook gives a short historical note on the develepment of police radio communications.

Quoting.....

"..(police) Radio communicatioins methods are divided into two general classifications which,
although normally accomplishing the same objective, decidedly differ in techniques. The first, radiotelephone, was used in the Detroit area for inter-city communications purposes as early as 1929. With the rapid growth of police radio,

radiotelephone came to be the principal medium for the exchange of inter-city and inter-state
police information. This method continued for several years until the volume of police messages made it necessary to develop, or adapt, another system for the dispatching of inter-departmental messages.

Thus, in 1935, the Police Departments of Davenport, Detroit, Indianapolis, Kansas City, Missouri, Minneapolis, and St Louis began a series of tests designed to determine the feasability of communications by radiotelegraph on frequencies designated by the Federal Communications Commission. These tests were so conclusive that operation of the National Police Communications net (NCPN) officially began in 1936, operating under a plan developed by Mr. E. K. Jett, E,ergency Services Engineer for the FCC.

" Now, after 15 years of successful operation, the APCO considers the radiotelegraph as the logical system for Network activity. In this system accuracy, reliability, and speed of communications are maximum, and there is the additional advantage that, with auxiliary power source, it is capable of completely independent operation.

It is not considerad, however, that all departments in the NPCN should utilize the radiotelegraph. In many states for example, radiotelegraph stations form the basic framework for complete state coverage. Radiotelephone stations function as feeders to the radiotelegraph stations and as relay points for other systems. Alabama, Arkansas, California(!!!!!), Illinois, Indiana, Missouri and Ohio are a few of the states so organized..."

End of quoted material----From
"The National Police Communications Network Directory, Sixth Edition, 1951
page 7.
Compiled by the Associated Police Communications Officers. APCO directory committee, 18108 Strasburg, Detroit, Michigan."

THAT comes from the horses *mouth*, not the other end (Len).

So there you have it, hard evidence of just one of his many intransigences.

MUCH of which he speaks he has NO knowledge.

One other point needs to be made here. Most of the individuals who instigated the Police HF CW net were active hams, engineers and police communicators, and most had a broad range of experience on HF as hams in addition to their service as military/shipboard/shore-station/aircraft CW operators. They *knew* the potential value of radiotelegraphy on HF to police communications, as was immediately shown during the testing period in 1935.

It's worth noting that virtually all radio engineers
of the day had begun their careers as hams.

Those are facts that *really* stick in Putzie's craw, but gee, someone
really needed to stuff it up his nose. It was almost inevitable.

And now the Unlicensed Clown Prince of RRAP will simply dismiss all this as
irrevelant, outdated and "old". Just like the Putzie himself.

My "favorite" worst experience:
As a new ham a year and half ago, I called CQ on 75 meters -- after
checking to make sure the frequency was clear, of course. First response
was:
Oh boy, must a newbie. Real hams don't CQ on 75. Go play on 11m
Second response was:
My God, you must be an old f**t. No one has called CQ on 75 in 30
years.

Neither offered up a callsign, of course. That would be wrong.

My real favorite experiences:
My first QSO. After getting up enough nerve to respond to a CQ, I
explained that this was my first contact. It seemed like 4 billion hams
wanted to say hello and welcome me (and the person who "owned" the frequency
was kind enough to let the party happen.)

Having a QSO with a gentleman who goes back to the late spark days.

All sorts of hams taking the time to help out a newbie (moi).

Well, no. You consistently talk like a CBer. The only other one who
talks this way is Brian Kelly, but only when he gets upset.

Even Len, a non-ham, talks more like a ham than you do.

All in the past, Len, all in the past. That sort of RTTY is long obsolete and the patent expired more than a decade ago.

You live in the past too much.
>
> The patent is in radio, by the way, not some mechanical thing.

So? Do you think no one else here has a patent?
>
> Who is it that kept on with long, long posts about the "history"
> of amateur radio regulations before 1955? Jimmie Miccolis did.

Back before the restructuring of 2000, I wrote a paper about the history of US amateur radio licensing from immediately after WW2 to the present time. It was an attempt to summarize the forces, developments, events and changes that resulted in the then-current US amateur radio license regulations. It was written to provide concise-but-detailed background information in one document.

It is interesting to note that you have not been able to find even one error or mistake in that paper.

Sorry, Dwight, I thought you knew how Len behaves here.

You have done an admirable job of responding to his lengthy and mistake-ridden
posts, without stooping to his level. Good job.

You invited his wrath by committing the dual sins of disagreeing with him and
providing solid factual rebuttals to his claims.

Len's hobby is wasting time. Your time.

It can all be summed up this way:

"No matter what job, educational level, employer, experience or
government/military service that a radio amateur has, or what evidence a radio
amateur presents, if said radio amateur opposes Mr. Anderson's views, he/she
will be the target of Mr.Anderson's diversions, invalid logic, insults,
ridicule, name-calling, factual errors, ethnic/racial/religious slurs,
excessive emoticons and/or general infantile behavior."

Oh?

I've been involved in Amateur Radio over 30 years now and I have NEVER
heard a Ham talk like Lennie talks, especially ABOUT Amatuer Radio.

Reassess your statement. It was pretty stupid.

Steve, K4YZ

>In US amateur radio, Technician Plus Class examinations have always
>required morse code testing. At the same time, the Technician Plus
>Class license numbers have steadily increased from the introduction of that
>license class until its being closed to new licenses in April of 2000.

I've sat in on 6 VE sessions in the last 14 months, and we have granted several CSCE's for element 1 only to Techs. I wish there was some VEC-wide survey to make an assessment of how many of these are out there to better assess now many of those "Technicians" are actually "Technician Plus" authorized.

>For proof, we need only look at the growth in US amateur radio for the past
>33
>years:
>
>US Hams:
>
>1970: 270,000
>1980: 350,000

>1980 to 1990: 46.8% (164,000 net growth)
>1990 to 2000: 32.2% (166,000 net growth)

Uh oh, Jim...You deluged Lennie with facts. Now he's got to spin-up some "mighty morsemen" rant to hopefully bury it.

>It stands to reason that if code testing were an 'unnecessary, arbitrary, and
>distasteful (to many) barriers to entry', those who were interested, but
>dissuaded by those unnecessary barriers would "jump in." when the 'barriers'
>were eliminated. Except that's not what happened, in either absolute number
>of
>hams or percentage growth.

I do believe that you, Dave, Brian, Larry, myself and about another half dozen regulars said this was probably going to be the result of "Restructuring". The only real net gains were in "upgrades", NOT overall new

Amateurs.

I wish I had kept my collection of "Popular Communications" magazines. I had them from First Issue. Although not the story you quote, they had a historical piece in there about the inter/intra state police nets AND the US's interoperability with INTERPOL on HF, both voice, CW and TELEX/RTTY in the early years. Had several pics of the gear and operators at the operating position using (oh my!) Vibroplex bugs.

Yes, I know Lennie's full of it. He can't avoid it. He was born an idiot, he's lived life as an idiot, now he's wasting away as an idiot, but not before making us all painfully aware that he IS an idiot.

But I guess since he's also a Masochist, he's enjoying his retirement. I can find better things to do myself, than public self-humiliation, however.

'X-No-archive: yes'

Hey Irv, speaking of pirate radio stations emanating from Belgrade Lakes, Maine... I have a lot of questions about old man pecker-breath.

Why does the MAN constantly qrm whoever's on frequency when his stupid broadcast comes on? Are you telling me that he can't HEAR 4 or 5 people talking when they're running 1500 watts? He constantly fires up on top of their existing QSO's like the selfish old reprobate he's rumored to be.

And another thing. Does his broadcast NEED to have the worst audio on ham radio? He sounds terrible. Awful! The audio's all pinched up and nasty like a CB set operating off an HO scale model train power supply. Christ, is he really an engineer or is that a lie too?

I don't have anything against homosexuals per se, but can't his co-host tone it down a little? His campy little stories with all their homo-erotic content can be a little nauseating at times. Dinosaurs and K-Y jelly, or whatever it is he goes on and on about week after week... all I'm saying is, it's a little much for prime time, don't you think?

By the way, when did it become legal to broadcast on Amateur Radio. When he asks non-hams if they'd like to become hams, isn't that known as broadcasting to the general public?

And when he tells them to go to his website where you see all kinds of shit from ballcaps, to radio instruction courses, to credit cards and god-knows-what for sale... isn't that what the FCC calls 'pecuniary interest' and isn't that illegal on ham radio?

And what about this Solomon Islands "school" station on his so-called website. That's run by Sam Moron isn't it? Isn't he the dude who supplied all the radio gear to the terrorists in Somalia and Bougainville?

Then there was that bogus taped CQ he ran for hours on 20 meters to attempt to keep the frequency clear from any normal ham who wanted to use the frequency. Can't this guy afford to buy some time on a real short wave station? Why does he think he can bring his Jerry Springer shit to ham radio anyway? Does he really think we want to hear that crap on ham radio?

When is he gonna replace that crappy set of radio shack timers he uses? Did any one tell him that they fail constantly... that his

transmissions start and stop whenever they feel like it? I guess if he had a control operator at the station he'd realize that, huh?

Talk shows - kids shows - dinosaur programs - call-ins from CBer's - what his buddies did ten years ago - that's worthy of a bulletin? I don't thiiiiiiink so!! And WHY is he shamelessly shilling this Joel Farcecloth's whatever... Las Vegas teachers thing he rants about? Since when do we advertise our joint business ventures on ham radio... again, can you say pecuniary interest?

Is he still threatening hams with those stupid Felony Affidavit Complaints or did he finally realize the department of justice only kept them around in case they ran out of toilet paper one day?

Did he really pretend to be affiliated with the UN and get busted by the FEDS for pretending that? What else did he lie about?

I hear the FCC wrote him a long letter asking about all the illegal crap he does and he responded with a freedom of information request! Doesn't he realize there is a whole separate office designated for that and you have to specify what you want and that it COSTS MONEY to get that information!? It's not FREE dumbass! I sure hope my tax dollars aren't going to be paying for research about his unpaid notices of apparent liability.

In my humble opinion it's high time the Feds knocked this A-hole of his cardboard pony and took away his CB set. He's a menace to the hobby as well as anyone with a brain. No wonder a lot of foreigners think Americans are idiots! They must listen to the MAN.

-Chris

You have hit the nail on the head exactly. The military was looking for
people who could copy random code groups at 20wpm or more not people who
could copy plain text at a mere 5wpm. It's like the difference between
shooting hoops in the back yard or being the next Michael Jordan.

> 1990 to 2000: 32.2% (166,000 net growth)

Thanks for the data. I was born in 1950. The overall US population has increased roughly 50% since then. Yet the number of hams has tripled since then. Certainly sounds like growth in hamdom to me.

>
> Oddly enough, percentage growth slowed down after the introduction of code test

Again excellent data, proving that ham radio is growing.

Thats how all rrap threads end up - people calling each other names. I think its in the group charter that no message can stay on topic for more than 3 posts!

Ah, I see. As I said, I've never really paid that much attention before. I'm sure I've posted messages to threads he has been involved in, but don't remember ever having an extended discussion (at least not one like this anyway). Lets just say I certainly won't have one with him again. I don't mind an extended discussion occasionally (especially if it means something to me), but I don't have time for nonsense.

In the meantime, why don't you try public service that doesn't involve your home or complex equipment? Many organizations (the Red Cross, etc) have just as much, perhaps more, need for ham operators in the field. Perhaps your local civil defense office uses hams on location (most do). Though not exactly ham radio related, other organizations (the USCGA, CAP, etc) have a need for people with radio skills to operate their equipment or equipment in other radio services. Many organizations offer their own training, either on the job or through some type of course work. If time is the issue, talk to the various organizations. Most don't make huge demands on their volunteers.

The USMC was still aptitude testing for Morse Code aptitude as late as September 1974...This I know since I had to sit through a battery of tests in the third or fourth week of that month for that very thing.

My entire training series (four platoons, specifically Series 2100, of which I belonged to Platoon 2100) was taught E, T, S and O. "Training" lasted about 30 minutes. They didn't tell us how fast they were sending the letters, but it wa at least 10WPM.

Myself and eight others were singled out and the rest of the series went on to other things. Myself and one other fellow were already licensed as Amatuers. He and I were tested seperately. I maintained 100% copy up to 18WPM. I was getting nervous by then and started to choke on the 25WPM, but still had 90% copy. My performance was "less than adequate" at 30, but I think the examiner was just jerking us around for grins-and-giggles.

It was enough that I was offered an MOS in "cryptography" after boot camp with unspecified "post training" benefits. I declined, my heart set on Avionics.

I ran into the other fellow about 5 or 6 years later. He took the option. Good for him since he HAD been slated for infantry! On the day he was promoted to Sergeant, he was "discharged", re-sworn and put on the bars of a Warrant Officer! He never wore those Sergeant stripes, but he retired as a Mustang Captain.

Ya pays yer money and takes yer chances!

>> I actually GOT all that RTTY experience and GOT one patent.
>
>All in the past, Len, all in the past. That sort of RTTY is long obsolete and
>the patent expired more than a decade ago.

All those Teletype Corporation all-mechanical teleprinters were obsolete by the time they had made a MILLION of them. No problem. They all got replaced by faster, better ways to send written data. Teletype Corporation tried to keep their old ways going with the Model 40 series of combination electronic and mechanical teleprinters...but they eventually stopped those, too. It's called progress, Jimmie.

I don't really know if my single radio patent was renewed or not. It was assigned to RCA Corporation. RCA Corporation was purchased by General Electric about the time the 17 years were up. I have no knowledge of whether or not GE renewed it for a new term. Do you?

>You live in the past too much.

Hardly. Radio as a communications medium is only 107 years old. You keep touting morse code all the time and morse code was first used in 1844, 159 years ago.

You seem to be posting out of spite. I did HF radio communications operations, maintenance, supervision for two full years in the 1950s, did microwave radio communications operations, maintenance, supervision for another year following that. Big station, many thousands of messages per month. Yes, HF radio as a primary communications medium DID go out of date. So did the old 60 WPM teleprinters. In fact, the whole Army, then USAF HF radio station was closed down in 1978 and land, buildings given back to the Japanese.

Long-distance communications for commercial and government communications is now done via fiber-optic cable or satellite relay. Fast, efficient, much more reliable. Radio amateurs still stick to HF bands for the majority of their communications, the same as what others did a half century ago.

Since the 1950s I've communicated by 100 WPM mechanical teleprinters, electronic text transmission means at speeds from 300 BPS on up to 56,000 BPS, even done very slow

data rates...plus operating several different protocol facsimile machines, sending-receiving television (industrial slow-scan, NTSC video, HDTV video) over RF. I haven't done AMTOR or PSK31 on HF, only a form of PACTOR at 2400 BPS via HF. Not a problem. As the new forms of communication came out, I got to use most of them.

I didn't sit back and rest on morse code use glory in only amateur radio as you APPEAR to do, Jimmie.

>So? Do you think no one else here has a patent?

Kellie has ONE patent for a bearing that does not need lubrication. A Delphion search doesn't show any "Miccolis" patent. Cecil Moore had several patents in electronics, but Cecil got tired of all the PCTA bullshit and went to another newsgroup. I recall Jim Kelley claiming a patent on some golf-related thing but I never searched for that to examine it.

Do YOU have a patent?

Have YOU published any paper in a professional association or academic institution publication? If so, when and where?

The IEEE History Center keeps asking for historical information on electronics in general. That would be a good place to get the recognition you seek. IEEE stands for Institute of Electrical and Electronic Engineers (I'm a Life Member) but they aren't fussy about being an IEEE member in order to get published. IEEE is a professional organization. Since you claim to work as an electrical engineer (someplace), you've got an easy set of entry requirements.

There's also the Radio Club of America, a membership organization open to all involved now or then in radio. It was formed in 1909 (5 year before ARRL) and still exists. You can get more details on their website. That website has a number of other papers and documents about early radio history, biographies of notables (Ed Armstrong for one). It is not affiliated with RCA Corporation that was purchased by General Electric.

There's also several firms around the USA that print books privately (without going through book publishers) on any subject (including electronics). You can find their names and addresses in the annual Writer's Guide, writing magazines, even through the Internet. Of course, you have to pay ALL expenses on self-publishing.

There are many and varied venues for Papers of great signifcance. Go for it!

>Where is this stated explicitly?

In the US Army it is contained in an "AR" (Army Regulation) which has
long been out of date and eliminated from any current regulations. I
saw it and discussed it with Captain William Boss, then the Officer
in Charge of the ADA Transmitter station (and then a licensed US
radio amateur). The morse code aptitude test was discussed in an
informal discussion between two US Army commissioned officers
at the Far East Command Headquarters in Pershing Heights area
of Tokyo about 1954 after my general query to one of them (while on
official duties requiring my visit to FEC Hq).

>
>The "Armed Forces of the United States" used those aptitude tests to find the

Miccolis should state his own personal experiences on US
military recruit testing as well as his US military experience
in communications of any sort.

Miccolis has NO such experience, hasn't seen an AR, didn't
even fall under the Uniform Code of Military Justice at any time..

>> A better question, more related to "saving the Novice Class

>In US amateur radio, Technician Plus Class examinations have always
>required morse code testing. At the same time, the Technician Plus
>Class license numbers have steadily increased from the introduction of that
>license class until its being closed to new licenses in April of 2000.

Do not try to misdirect on "Technician Plus" testing. The "debate"
was on the NOVICE CLASS.

If you must misdirect, try the pre-restructuring no-code Technician
Class. You don't. That will show you quite a different picture.

>In US amateur radio, Extra Class examinations have always
>required morse code testing. At the same time, the Extral Class license
>numbers have steadily increased from the introduction of that license class.

Irrelevant. Misdirection. The discussion started with the
Novice Class. Try to stay in focus.

That still doesn't "explain" why the morse code test must
continue to exist.

>> The decrease in license numbers was so much and for so
>> long that it was obvious to all who bothered to examine that
>> Class. The FCC dropped the Novice Class from any new
>> license grants following the recent restructuring.
>
>The FCC also dropped the Technician Plus and Advanced Class from any new
>license grants in the same restructuring.

Irrelevant again. More misdirection. The thread was on the
NOVICE class. Look at the Subject title line. Try to focus.

>> Another question, again more suited to the subject thread,
>> is WHY "save" the Novice Class?
>
>There's no clear reason to save it, because the Technician and Techncian Plus
>classes of license have been the choice of most new US radio amateurs since
>the 1980s.

Where is that stated explicitly? ARRL statements?

ARRL statements for several years prior to 1991 did not
think so...they were pushing the NOVICE Class as the

"entry" license. They continued to do that for several
years following.

>> The only US amateur radio license class that kept growth in
>> US amateur radio license totals was the no-code-test
>> Technician Class.
>
>Incorrect.

Sorry. VERY CORRECT. Two hundred thousand NEW
no-code Technician Class licenses between 1991 and
mid-2000 make you very wrong.

>The above 'alternate history' statement assumes that none of those who
obtained
>Technician Class licenses after February 1991 would have done so if that
>license had not lost its code test. That is clearly incorrect.

Supposition fantasy. You cannot possibly know the motivations
of two hundred thousand no-code Technican Class licensees.

>It stands to reason that if code testing were an 'unnecessary, arbitrary, and
>distasteful (to many) barriers to entry', those who were interested, but
>dissuaded by those unnecessary barriers would "jump in." when the 'barriers'
>were eliminated. Except that's not what happened, in either absolute number of
>hams or percentage growth. Growth in total hams was almost exactly the same
>during the '90s, compared to the '80s, and the percentage growth actually
>dropped.

No, you are too far into supposition fantasy. Two hundred thousand
licensees wrong.

That PCTA argument has become a trite, worn-out cliche' of no
logical value.

That old horse has been beaten to death so many times over that
no skeleton is left to bleach in the sun.

The ACTUAL growth has been discussed over and over again in here
prior to the restructuring data. You've been shown the numbers.
You want to discount the evidence, turn a blind eye to it, all to
support your obstinate need for winning an argument at any cost.

>Since the closing of the Technician Plus to new licenses in April 2000, FCC
has
>been renewing all Technician Plus licenses as Technician, causing the latter
>class to grow and the former to shrink.

Where is this explicitly stated?

Did you download the entire FCC database of amateur radio licensees
for several years and do your own sorting and totalizing? Or did you
take someone else's statements as truth?

Why do you accept some statements as truth and others as false?
The answer seems clear. A double standard. Statements from
pro-code supporters are "truth" while statements from no-code
advocates are "false." Tsk, tsk...hypocritical.

Try to stay in focus. The subject thread in the message header says
explicitly "Novice Class." It doesn't say Technician Plus or Technician
or Extra. Don't wander so far afield.

The NOVICE CLASS license numbers had been steadily dropping
for years before the mid-2000 close of new NOVICE CLASS
license grants.

>received relayed traffic off the radiotlegraph net from LAPD!

That may be interesting to morsemen as a historical document but
1945 was 58 years ago. Many different radio services used manual
(morse) telegraphy in that past time. There is no dispute over that.

Not quite "hard evidence." "Hard evidence" would be the document itself.
This newsgroup is not a court of law.

Carroll seems to be hunting for many "pounds of flesh" and is quite
late with this "evidence," nearly five years from the original dispute.

Nearly five years ago, at the beginning of this newsgroup episode,
I stopped by a North Hollywood LAPD Division station and
requested public information on older communications methods
used by the LAPD. I was politely and graciously given a lot of
such information...along with website addresses then just
beginning by ex-LAPD and ex-CHP members on the subject of

communications by police departments. On some details I was filled in (on interdepartmental phone) from someone at the Piper Technical Center in the center city area of LA (Piper Center is a large technical facility for other PDs as well as LAPD).

The essence of the information was that the LAPD used teleprinters and some facsimile types for all written or printed electronic communications since the 1950s. The written communications type, with same material at both communications link ends was explained as necessary to avoid certain legal problems in the courts later. [avoidance of "technicalities" court disputes later on various cases]

It was also noted by the LAPD personnel that "telegraphy" is a general term that applies both to manual (morse) telegraphy and teleprinters. I already knew this but did not remark on it. As far as I was able to determine in a single visit, there was no historical information available on any manual telegraphy means, nets, or radio use by the LAPD after the WW2 years. One had "heard about it" before 1941 but there was no "hard evidence" readily available. There may have been some someplace. Such was just not handy and available.

I was briefly shown some of the in-use communications for written communications, described as "old" by LAPD personnel: Teletype Corporation ASR-33, a 1970-era Facsimile set upgraded to modern comm protocol using the carbon-paper transfer method for "wirephotos"...they still used that old term...a couple of line printers with adapters to avoid having to use PCs for interfacing, the newer mobile terminal base stations for communications with data terminals in patrol cars, PC arrangements to tie into the CHP network (mobile base connected directly to that on electronic demand for "wants and warrants"), a lot of PCs in various cubicles for both interdepartment, interagency restricted-use comm as well as Internet access. There was no evidence of any manual telegraphy equipment anywhere, not even a gold-plated manual key used as a paperweight (once seen in a US Army office).

>MUCH of which he speaks he has NO knowledge.

I freely admit to not having any hands-on life experience prior to 1952 of any large communications networks anywhere in any radio or wired communications services, civilian or government.

I visited one LAPD Division station and talked to three LAPD personnel for the information and was shown considerable communications resources that were working then about 5 years ago. Anyone could do this. I posted an 800 number as well as a local telephone number to the LAPD Public Relations that anyone could query for additional information.

Despite all the quotes from OLD documents (1951 is 52 years in the past) about the efficacy of manual morse code telegraphy, such manual telegraphy IS NOT USED NOW BY ANY POLICE DEPARTMENT. It didn't survive, it wasn't useful enough compared to more modern, more efficient methods.

All the crying, moaning, shouts, and imprecations about the wonderfulness of morse code will NOT bring it back to any sort of prominence. That includes temper tantrums and quoting documents that are over a half century old, the quoting done nearly 5 years after a disagreement began.

Put it to rest, Carroll.

> Seems to me the Lady's got you pegged, Putzy One.

Not really. Dee is a proponent of the Established Order in
US amateur radio, namely that Standards and Practices in
US amateur radio are fixed to that of the 1930s when morse
code was king and ARRL was the overgovernment of amateur
radio.

>>Dee represents the Established Order
>
> Hmmmmmmm...I don't remember seeing Dee's name on any ballot. I'd vote
>for her though if it did.

"Established Order" is a concept, a fantasy promulgated by ARRL
to all the Faithful, a belief in self-righteousness despite ignorance
of the much larger reality of the entire radio world.

There is NO "ballot," only a Belief System all about some fantasy
of a self-contained amateur activity all alone that boasts of its
mighty exploits as if it is the ultimate ruler of radio and technology
involving radio.

>>All arguments against the Established Order are therefore invalid.
>
> No, just the irrational, emotional, falsehood-based rants of former
>radio technicians who think they were engineers.

What about those former electronic technicians who actually
ARE electronic engineers, have the demonstrated capability
and the experience and the accreditation and continue in that
endeavor? That is my category.

Robeson, the Steamy Stalker, has NO experience whatsoever
in any professional electronic engineering. He has one short

period of claimed employment as a purchasing agent for a local electronics firm whose products are mostly for the wired communications product trade. For the rest of his "experience," he can only point to "30 years as a ham" and some vague references to some kind of USMC avionics supposedly done in a military career cut short by a claimed military accident with resulting Medical Discharge termination.

The Steamy Stalker has absolutely NO basis for any of his charges, but his lack of emotional stability and lack of ability to get along with others of opposing views prompts him to insult all who disagree with him.

> That would be you, Lennie.

Here's a partial listing of past "commentary" by the Stalker -

1. I've given a very short listing of past employers in here. The Stalker howled and raged something about "CV" [Latin initials for "curriculum vitae" or facts of total life experience]. He did not check any of those references in any way, made a number of inferences that such were "lies" even though a number of different government agencies, IRS among them, were very convinced such employment was truth.

2. I've given references to living US radio amateurs who know me personally (one was Best Man at my wedding). No one, certainly not the Stalker, seems to have contacted them for any confirmation. In essence, he simply ignored such references.

3. I've digitized my First Class Radiotelephone (Commercial) Operator License first received in 1956, including the reverse side showing the radio and television stations worked at that year and duties, written in handwriting by the Chief Engineers at those stations...and sent those by e-mail SEVERAL TIMES to the Stalker. He refused to acknowledge them, claiming all were some kind of "lie" due to an unfortunate accident that attached the wrong image on the first sending.

4. The Stalker then made up a libelous "homepage" on AOL which was a prima facie bit of personal insult easily evidenciary of libelous behavior in any civil court. AOL removed that immediately as well as his equally-libelous new screen name when notified.

5. The Stalker tried to manufacture some kind of "case" of "cowardice" about my US Army Signal Corps duties and location, repeatedly refering to my military occupation specialty as "rear area radio clerk." He continued to do so despite my pointing out what they really were, explicit details of duties and responsibility which were not only referencible through government archives but were witnessed

by a still-living radio amateur who was assigned to the same
unit and military radio station and who did the same duty.
The Stalker has not made any explicit details of his own
military service and "battle experience/heroism" other than
the vague generality of "seven hostile actions."

6. In my 14 pages of text on my Reply to Comments (of another)
on FCC NPRM 98-143 (received and made public record on
13 January 1999), Robeson sent a single paragraph (on the
public record of 25 January 1999, past the stated cut-off date)
that I should be deprived of any consideration on Restructuring.
In essence, he was so enraged by newsgroup messaging on
the code test issue that he had to carry this to an extreme.
Such an action was little more than more bullying tactics
that would have deprived a US citizen and military veteran of
exercising his Constitutional Rights (First Amendment to the
US Constitution).

> "Pedantic Parson"..."Herr Oberst"...."Jackbooted thug"..."elitist
>Morsemen"..."Dill Sergeant"...All various "nicknames" bestowed on licensed
>Radio Amateurs who happen to disagree with Lennie.

Only after those same individuals used similar nicknames, false
accusations, and personal insults to me FIRST.

The Stalker's behavior is that of the schoolyard bully who thinks
that he is can, by force or other means, do anything he wants
but cannot take the same sort of commentary back. He cannot
"play the game" by any rules other than his own.

The Stalker's sociopathic behavior is that of domination by any
means. He cannot debate and lose gracefully, he must vent
his self-righteous anger in public, lose control, and thereby
cast a negative image on himself and that of US amateur radio.
He needs both mental guidance and therapy.

Hey... Now why didn't I think of that? Too bad the ARRL won't agree.
Guess they're more concerned with the corporate bottom line, and not the
good of the service.

Goes way beyond even that, Dee. Some typical skills needed (and tested):

- Ability to copy both plain language and code groups correctly at various
speeds with not more than a certain (very low) number of errors per hour.
- Ability to "put it on paper" using both a manual typewriter or pencil.
- Ability to send highly readable code using either straight key or bug.
- Ability to adjust, troubleshoot, operate and repair a wide variety of types
of radio equipment
- Ability to do all of the above for long periods of time and under "difficult"
conditions

>It's like the difference between
>shooting hoops in the back yard or being the next Michael Jordan.

Excellent comparison!

I would say:

It's like the difference between finishing in the lead pack of the Boston
Marathon and being able to jog a mile on a track in less than 12 minutes.

>
>Thanks for the data.

You're welcome, Dee.

>I was born in 1950. The overall US population has
>increased roughly 50% since then. Yet the number of hams has tripled since
>then.

Actually, the number of hams in the USA back in 1950 was a little less than
100,000. That means US hamdom has grown by 6.85 times since then!

> Certainly sounds like growth in hamdom to me.

Yup. The growth has sped up and slowed down over the years, but always the end
result has been long-term growth.

Consider this bit of "ancient" history:

From 1950 to 1962, US ham totals grew from just under 100,000 to about 250,000.
Then in 1963 the growth stopped dead, and the number of US hams stagnated at
about quarter million for more than 5 years. In fact, the totals actually
dropped slightly.

In 1969 the growth started up again and continued throught the '70s, as the
numbers above show. The changes now known as "incentive licensing" went into
effect near the end of 1968. Despite predictions that those changes would spell
the end of amateur radio, the opposite happened.

Cause and effect? Who knows?
>
>> Oddly enough, percentage growth slowed down after the introduction of code

>
>Again excellent data, proving that ham radio is growing.
>
Thanks.

What would have happened without code waivers and the dropping of the 5 wpm code test from the Tech in 1991? Nobody really knows, despite claims to the contrary by some. The trend of previous years show that amateur radio in the USA probably would have continued to grow.

As I have been.

At present I check into the daily District ARES net and the
weekly County ARES/RACES net, attend planning meetings where I
serve as the frequency coordinator, and assist in training new
hams in what to do and how to do it.

My "call-out" position is with the local hospital - a major
metropolitan medical center - where we have hospital-owned
equipment in place for 144, 220, and 440 voice and packet at an
operating position in their "command post". Another operator
brings in his own equipment to provide SSTV capability. We
monitor and operate on both the County ARES/RACES net and a
separate area-wide inter-hospital ARES net and have simplex
capability to pass traffic if the repeater(s) go down. The
County EOC maintains HF and VHF contact with the state EOC, 70
miles away.

And that's for "disaster" work. Our local club has a very
active program of providing "public service" communication
(either primary or backup) for things like bicycle charity
rides and civic festivals and we cooperate with other cluns in
their similar activities.

> Great! Good to see more people in here who take civic responsibility.

I didn't answer the question the first time around because I
was too busy organizing my section of the review of the recent
statewide Quake-X 2003 exercise where one of the features was
that for four hours the involved agencies could not use their
super-duper-Motorola trunked radio systems or their telephones
to contact other agencies or their own fixed facilities. We
also had several lucky amateurs riding the fire apparatus of
the Tualatin Valley Fire and Rescue Squad (which in spite of
its almost comical name is the second largest professional fire
department in the state and one of the best trained and equipped
in the western US) to test the practicality of passing tactical
traffic to those mobiles via ham radio.

We handled a LOT of tactical as well as status exercise traffic
and we'll do it again in the fall. So much for Webfoot Valley...

You'd be trying to hit a moving target even if you could gather that data, Steve. By the time you had the data gathered, at least some of those "Techs-with-HF" would have upgraded to General or Extra.

Also, don't forget that the total number of Technicians includes not only "Techs with HF" (Techs with Element 1 CSCEs) but also Tech Pluses who renewed after April 14, 2000, and Novices who passed Element 2 but not Element 3.

I don't recall ever making a prediction like that, Steve. Could you show the post where I did?

I do recall making the point that the changes of 1990 and 1991 did not result in big growth increases or lots of new technology in ham radio.

First Lennie chastises Jim Miccolis about his job and education:

>All us readers can see is that you are deliberately vague about
> what you've done, where you've worked, or all the claimed
> expirience. Very vague.

Then when Jim asks him about his (as he has been asked before but has refused to identify all-the-while DEMANDING everyone else's credentials), he responds with:

>>Your degree is from what accredited institution? What date is on your
>>diploma?
>
> It was from an accredited institution in the Southern California
> area.
>
> The date is from the last millenium.

This is what gets this scumbag labelled as a..well...as a scumbag!

>It means you HAVE to "get even" in a discussion, no matter
> how or where. You MUST win.

Whew, Mr Pot, that kettle sure is getting black, eh?

Steve, K4YZ

>Steve. By the time you had the data gathered, at least some of those
>"Techs-with-HF" would have upgraded to General or Extra.

No doubt you're right, Jim, but it would give us a ballpark idea on the
true percentage of HF-authorized Techs. I'd be happy to have a number within
15%.

>> Uh oh, Jim...You deluged Lennie with facts.
>
>Are not facts the way to conquer ignorance and falsehood?

=) Not on Lanark Street. He'll be seething for days!

>>Now he's got to spin-up some "mighty morsemen" rant to hopefully bury it.

>dropping of the Tech code test, and growth after those changes.

And the growth continues. Why can't he accept the fact that the radio
world just happened to not need him as bad as he needed it?

>> I do believe that you, Dave, Brian, Larry, myself and about another half
>>dozen regulars said this was probably going to be the result of
>>"Restructuring". The only real net gains were in "upgrades", NOT overall
>new
>>Amateurs.
>
>I don't recall ever making a prediction like that, Steve. Could you show the
>post where I did?

No, Jim, I can't, but I do remember a thread wherein all of us at one time
or another came in to at least close approximation on what post restructuring
would be like. I thought it was you that said there'd be an influx of new hams
and upgrades on April 14th. If it wasn't, I apologize.

>I do recall making the point that the changes of 1990 and 1991 did not result
>in big growth increases or lots of new technology in ham radio.

I do remember that. As I remember the promises of an influx of new folks
with Novice Enhancement and the No Code Technician. More like a brief surge at
high tide, not enough to make a surfer raise an eyebrow.

For those who renewed, we know who they are as long as the "prior class" field shows the "P" or "N". It's only those who got the CSCE after April 14, 2000 that we don't know about....

The fact that the FCC allowed any of these post April 2000 techs to have PERMANENT op-authority in the "novice HF" bands was a bonehead move (*). They should have had that expire after 365 days just like the credit for passing does. That way, these people would either upgrade or come in for an annual CW exam. :-)

(*) - There's NO way for anyone to tell that these people are or are not operating within their privilege when on HF because no one can tell if they have the privilege short of knocking on their door and asking to see the CSCE.

>Miccolis has NO such experience, hasn't seen an AR, didn't
> even fall under the Uniform Code of Military Justice at any time.

A chastising by Lennie...the SAME Lennie who insists that licensure and experience in the Amateur Radio service is unnecessary to comment on it, now chastising another with no military service for daring to comment on military policies.

Mind you Lennie's not served a day in uniform himself since the last former flag-ranked officer was the president and must depend on the VERY SAME SOURCES of material for any "current event" military opinon offerings that Jim does. Communicaitons included.

>Irrelevant. Misdirection. The discussion started with the
> Novice Class. Try to stay in focus.

Lennie! You're learning! Spelled "focus" right for once.

>That still doesn't "explain" why the morse code test must
> continue to exist.

Until WRC is over and Congress ratifies any changes, it's the law. What more do you need to know?

>Irrelevant again. More misdirection. The thread was on the
> NOVICE class. Look at the Subject title line. Try to focus.

We'll cut this chastising and save it so we can spoon feed it to Lennie the next time we get yet another "...When I was at ADA in 53..." story.

>>> The only US amateur radio license class that kept growth in
>>> US amateur radio license totals was the no-code-test
>>> Technician Class.
>>
>>Incorrect.
>
> Sorry. VERY CORRECT. Two hundred thousand NEW
> no-code Technician Class licenses between 1991 and
> mid-2000 make you very wrong.

You snipped the numbers, Lennie. Why?

Amateur Radio demonstrated a very positive growth pre-NCT. There was
nothing to indicate that it wouldn't still be going that way had the NCT not
been incorporated.

THAT is a fact.

>Supposition fantasy. You cannot possibly know the motivations
> of two hundred thousand no-code Technican Class licensees.

No more than YOU can "know" that Amateur Radio would have not continued
it's growth rates had the NCT not been implemented, Lennie.

Unless you can PROVE to us that you KNOW that those 200K + persons would
have absolutely NOT gotten an Amateur license otherwise?

[This I have GOT to see... ! ! !]

>No, you are too far into supposition fantasy. Two hundred thousand
> licensees wrong.

You reiterate an opinon that assumes YOU have certain knowledge that things
would ahve turned out differently. How can you know this?

>That PCTA argument has become a trite, worn-out cliche' of no
> logical value.

Kinda like the NCTA recite "No one else does it"...?!?!

>That old horse has been beaten to death so many times over that
> no skeleton is left to bleach in the sun.

Pot/Kettle/Black

>The ACTUAL growth has been discussed over and over again in here
> prior to the restructuring data. You've been shown the numbers.
> You want to discount the evidence, turn a blind eye to it, all to
> support your obstinate need for winning an argument at any cost.

Discount what? The numbers are right there for anyone with a calculator
to add up.

What DOESN'T add up is your insistence that it means anything other than
what it means...And that is Amateur Radio, while not growing in leaps or
bounds, was doing just fine before the NCT and shows no more or no less change
since the NCT.

Those are the facts. In black and white.

>Goes way beyond even that, Dee. Some typical skills needed (and tested):
>
>- Ability to copy both plain language and code groups correctly at various
>speeds with not more than a certain (very low) number of errors per hour.

Please state the exact allowed "errors per hour" from your
experience as a military radio communicator. A distinct and
referencible source is needed for this factoid.

>- Ability to "put it on paper" using both a manual typewriter or pencil.

Not a viable reason. Writing messages on paper is a requirement
of all soldiers and land force military members. Such is not
constrained to morse code telegraphy symbolism.

Your lack of experience in ANY military communications area
is noted there.

>- Ability to send highly readable code using either straight key or bug.

Please state the "bug" (automatic keyer mechanism) nomenclature
you actually used in your military communications experience.

>- Ability to adjust, troubleshoot, operate and repair a wide variety of types
>of radio equipment

Incorrect. A "wide variety of types of radio equipment" in the US
military does not, repeat NOT need manual telegraphy skill to
"adjust, troubleshoot, or repair." As to "operate," anyone in old-
time military radio communications could tune up and even
receive any morse code signal WITHOUT any morse skills.

>- Ability to do all of the above for long periods of time and under
"difficult"
>conditions

Please state your experience under "difficult" military conditions.

Please state the "long periods of time" you communicated while
in the US military.

>It's like the difference between finishing in the lead pack of the Boston
>Marathon and being able to jog a mile on a track in less than 12 minutes.

No military anywhere in the world operates on principles of
sport. The purpose of a military is "to close with and destroy
the enemy."

Please state your experience in the US military while in Special
Services running, playing basketball, or any other sport. Then
tie that in with morse code communications skills as a
"necessity."

Common US military land field radio communications from WW2
days to the Vietnam War times required small unit radio
operators to carry about 35 to 20 pounds of backpack radio,
about 40 pounds of "light" field pack plus about 12 pounds of
personal sidearm and its ammunition...en route from 2 to 16
hours at a time under conditions where the enemy could kill
you at any time. Please describe your US military experience
where you did anything like that or remotely like that. Please
cite the necessity for morse code skills under such an
environment...based on your personal experience, of course.
That is NOT a "marathon" or "track and field running"
environment although a land field radio operator had to sometimes
run for cover in order to avoid dying.

The old WW2 small-unit field radio was the VHF-range SCR-
300 weighing in at about 42 pounds (with all accessories).
It was voice only. The newer series of Korean War "walkie-
talkies" were about half that size and weight, also VHF, also
voice only operation. By the time of the Vietnam War, the
standard small-unit radio was the AN/PRC-25, VHF, very

much voice only operation (superseded by PRC-77, identical to -25 on outside, differing only internally). The AN/PRC-119 small unit land field radio was being made operational just before the first Gulf War, is VHF, is both voice and data, clear or encrypted operation. No morse code skills needed or required. About a quarter million radio sets of the PRC-119 family have been produced and are operational with the US military as of this date.

Please show how morse code skills in the US military are "exactly" equivalent or even vaguely analagous to:

1. Basketball.
2. Long-distance running.
3. Superstar celebrities of very rare athletic skill.
4. NOVICE CLASS amateur radio license class retention.

Take as long as you care to, make as long a posting as you normally do. The time you waste is your own...and that of all the readers here who have to wade through all your words of non-wisdom.

>
>You have hit the nail on the head exactly. The military was looking for
>people who could copy random code groups at 20wpm or more not people who
>could copy plain text at a mere 5wpm.

There's a great deal of difference among the PCTA gurus here.
One group says that "everyone can do it" with a lot "patience,
dedication, and hard work." Another group says that "anyone
can do it," no particular way to do it stated. The more arrogant
group touts their extraordinary ability at morsemanship and
looks down their elevated noses at the mundane ordinary
humans. They have not reached a consensus.

The interesting part is that so few of these PCTA gurus ever had
any specific claims on doing military communications by any
means, let alone morse code in random groups. The only one
who comes to mind is Hans Brakob, a USN Master Chief (Retired)
who has been absent here for many months. Brakob does not
claim to be a PCTA according to his own words.

With the exception of the USCG, all US military branches had
abandoned manual telegraphy for tactical and strategic radio
communications well before the first Gulf War. The heavy long-
distance messaging traffic in the US military was done via TTY
from about 1938 onwards. The USN began using TTY with
on-line encryption in late 1939 on cruisers and heavier ships.
The reason for TTY was security as well as more accuracy and
a sustained rate of 60 WPM. The US military's on-line
encryption system of TTY was never broken until the capture
of the USS Pueblo with intact equipment. A combined USN-
US Army team of cryptanalysts had broken the highest level
of Japanese code (usually transmitted via manual telegraphy)
prior to the Pearl Harbor attack.

>It's like the difference between
>shooting hoops in the back yard or being the next Michael Jordan.

Professional basketball is franchised, not licensed. No license is necessary to play basketball.

Michael Jordan is retired. He got too old for good professional basketball play. He has admitted that in public.

Morse code testing has long outlived its usefulness, is very old, and should be retired. PCTAs cannot admit that. To them the code test must remain because they had to take the test long ago before they too got old and tired.

OH? I am a member of the League and have several League publications
close at hand. Not a one of them references or promulgates" "Established
Order" as a League policy.

>There is NO "ballot," only a Belief System all about some fantasy
> of a self-contained amateur activity all alone that boasts of its
> mighty exploits as if it is the ultimate ruler of radio and technology
> involving radio.

Hmmmmmm. The ficticious "belief system" you rant about is 175,000 people
strong, sponsors countless operating and educational programs, a nationwide
emergency program and a traffic handling system that predates even you, Lennie.

There's no fantasy about reality. It's there. Too bad you aren't all
there. You might have enjoyed it.

>What about those former electronic technicians who actually
> ARE electronic engineers, have the demonstrated capability
> and the experience and the accreditation and continue in that

> endeavor? That is my category.

But not in Amateur Radio. Still no license despite an assertion you were going to do it. (you say you didn't say when...I say you're caught lying again) And your engineering skills are unknown to almost anyone in this forum. I know some folks who knew you and they weren't impressed.

>Robeson, the Steamy Stalker, has NO experience whatsoever
> in any professional electronic engineering.

Don't need it here, Lennie. This is Amatuer Radio...an avocation in which I have 30 years of experience.

>He has one short
> period of claimed employment as a purchasing agent for a local
> electronics firm whose products are mostly for the wired
> communications product trade.

I see your knowledge of thier products and services is even more limited than your knowledge of Amateur Radio if that was ever possible.

>For the rest of his "experience,"
> he can only point to "30 years as a ham" and some vague
> references to some kind of USMC avionics supposedly done in
> a military career cut short by a claimed military accident with
> resulting Medical Discharge termination.

In a forum entitled "rec.radio.amateur.policy", thirty years of Amateur experience is more than enough.

>The Steamy Stalker has absolutely NO basis for any of his
> charges, but his lack of emotional stability and lack of ability to
> get along with others of opposing views prompts him to insult
> all who disagree with him.

What "charges"...??? This isn't a court of law, Lennie. You said so yourself to another poster vis-a-vis other comments you made.

I observe that you are a pathological (and quite pathetic) liar.

I observe that you make all sorts of allegations about others conduct while doing it yourself.

I observe that you have no Amateur Radio license and no practical experience IN Amateur Radio that would validate or vindicate your opinions about Amateur Radio policy.

I observe you are not active in any Amatuer Radio club, program or project.

I observe you insist it's OK for you to snowplow your way into a forum in which you obviously have no vested interest or support, yet when anyone dares to comment on a subject you deem yourself expert on, you chastise them for "lack of experience" in THAT field. That makes you two-faced.

>1. I've given a very short listing of past employers in here. The
> Stalker howled and raged something about "CV" [Latin initials
> for "curriculum vitae" or facts of total life experience]. He did
> not check any of those references in any way, made a number
> of inferences that such were "lies" even though a number of
> different government agencies, IRS among them, were very
> convinced such employment was truth.

Ahhhhh...Yes, Lennie, I did. NADC. Care for me to repeat in this forum
what some of the folks there said about you?

>2. I've given references to living US radio amateurs who know me
> personally (one was Best Man at my wedding). No one,
> certainly not the Stalker, seems to have contacted them for
> any confirmation. In essence, he simply ignored such
> references.

I have never claimed you don't know, or even associate with licensees,
Lennie. I claim that you embellish what you DO tell us.

I don't think you want your N2 buddy to see how you used the KIA's from
your old Army outfit to embellish your "reputation" here, do you?

>3. I've digitized my First Class Radiotelephone (Commercial)
> Operator License first received in 1956, including the reverse
> side showing the radio and television stations worked at that
> year and duties, written in handwriting by the Chief Engineers
> at those stations...and sent those by e-mail SEVERAL TIMES
> to the Stalker. He refused to acknowledge them, claiming all
> were some kind of "lie" due to an unfortunate accident that
> attached the wrong image on the first sending.

Hmmmmm...."unfortunate accident"....?!?! I call it incompetence,
considering your insistence on being an electronics "professional"

And yes, I call you a liar. It's normal to call liars liars.

>4. The Stalker then made up a libelous "homepage" on AOL
> which was a prima facie bit of personal insult easily
> evidenciary of libelous behavior in any civil court. AOL
> removed that immediately as well as his equally-libelous
> new screen name when notified.

Nope. The screen name is still mine to use. They only deleted the page.

Guess Lennie didn't want the whole world to see what he did. Cowards have
a problem with facts. Lennie's a coward.

>5. The Stalker tried to manufacture some kind of "case" of
> "cowardice" about my US Army Signal Corps duties and
> location, repeatedly refering to my military occupation
> specialty as "rear area radio clerk."...(SNIP)

No, I didn't say you were a coward because you WERE a rear area radio
clerk...I said (and still say) your attempts to embellish your own reputaion by

associating yourself with KIA's that died three years before you joined the unit was cowardly.

>He continued to do so
> despite my pointing out what they really were, explicit
> details of duties and responsibility which were not only
> referencible through government archives but were witnessed
> by a still-living radio amateur who was assigned to the same
> unit and military radio station and who did the same duty...(SNIP)

Do you REALLY want me to write to this guy and provide him links to the posts you made, Lennie?

>The Stalker has not made any explicit details of his own
> military service and "battle experience/heroism" other than
> the vague generality of "seven hostile actions."

Why? And have it disrespected and assailed by a creep who thinks what he does is funny?

>6. In my 14 pages of text on my Reply to Comments (of another)
> on FCC NPRM 98-143 (received and made public record on
> 13 January 1999), Robeson sent a single paragraph (on the

> that I should be deprived of any consideration on Restructuring.
> In essence, he was so enraged by newsgroup messaging on
> the code test issue that he had to carry this to an extreme.
> Such an action was little more than more bullying tactics
> that would have deprived a US citizen and military veteran of
> exercising his Constitutional Rights (First Ammendment to the US Constitution)

WHOA, Lennie! Wrapping yourself up in "patriotic bunting"...?!?!

The term is "reply comments", wherein one entity can rebut the comments of others. You didn't like having your true nature flaunted.

Too bad...so sad...

>> "Pedantic Parson"..."Herr Oberst"...."Jackbooted thug"..."elitist
>>Morsemen"..."Dill Sergeant"...All various "nicknames" bestowed on licensed
>>Radio Amateurs who happen to disagree with Lennie.
>
> Only after those same individuals used similar nicknames, false
> accusations, and personal insults to me FIRST.

Was lying in public a birthright of yours, Lennie? Did your mommy let you get away with this kind of behaviour?

Google referes on who-started-what as far as you and I go, and Jim Miccolis has NEVER called you anything except by your given or family name. So, there we have two LennieLies in one paragraph.

>The Stalker's behavior is that of the schoolyard bully who thinks
> that he is can, by force or other means, do anything he wants
> but cannot take the same sort of commentary back. He cannot
> "play the game" by any rules other than his own.

Coming from someone who changes the rules for himself, this is quite funny!

> The Stalker's sociopathic behavior...(SNIP)

Anyone who get's under Lennie's skin is "sociopathic".

No doubt a term his correspondence course psychic wife taught him...Or was it psychologist? Hmmm....Can't keep Lennie's stories straight...(But then neither can he...)

>He cannot debate and lose gracefully...(SNIP)

So who was the judge of who "won" and who "lost"?

You...?!?!

BBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! !

>...he must vent
> his self-righteous anger in public, lose control, and thereby
> cast a negative image on himself and that of US amateur radio.
> He needs both mental guidance and therapy.

That's funny, coming from a guy who hangs out in a Newsgroup for an avocation in which he has no vested interest, and has voiced significant hatred and disdain for.

Pot/kettle/black. It's got Lennie written ALLLLLLL over it.

Steve, K4YZ

>If yes, why?

Ryan:

Yes, we should employ bandplans in the ARS. The best reason I can
think of is to avoid the chaotic conditions on-the-air if we had a free-for-all
system where anyone could do anything anywhere. One practical benefit
of bandplans is that if you want to work someone on, say, one of the
digital modes, you know basically where you're going to find that
particular kind of activity on any given band just by referring to the
bandplan.

Without bandplans, all we'd have is high-power SSB 'phone everywhere,
and everything else QRM'ed to oblivion.

> SSB. It is technically possible.

In theory, anyway. But of what use is that in amateur voice SSB communications?

Since this is a policy newsgroup, the most important question about "D.I.Y. "Hi-Fi" SSB links" is obviously "What should the policy be towards SSB voice bandwidth?".

FCC seems to think hams should restrict the bandwidth of their SSB voice signals to the minimum necessary for communication - typically 3 kHz or less. Particularly in crowded bands.

FCC's opinion has taken the form of warning letters to hams using SSB with 6 kHz bandwidth. Is FCC "wrong" on this?

It would be an interesting statistic, but not much more. As pointed out by D. Stussy (many tnx!) a lower bound on the number can be had from inspection of the "former license class" field in the database.

This time next year, if not sooner, it may well be a moot point.

Which is a good thing.

There were some (not me!) who predicted that the renewal percentage of Technicians would be very low. From casual observation of the AH0A renewal data, it appears that the renewal rate for Techs is not materially different

from any other class. Which is another good thing.

>Why can't he accept the fact that the radio

>at
>high tide, not enough to make a surfer raise an eyebrow.
>
I think it was Jon Bloom, KE3Z, who showed from old Callbook data that the
number of new licenses did surge after 1991, only to slowly fade back to
near-1990 levels.

I also recall that way back in the early 1980s the Technician (WITH code test)
had effectively replaced the Novice as the "entry level" license. Part of the
reason was the lack of 2 meter Novice privs. I know lots of local hams who
skipped Novice and went straight for Tech even before the 1987 written test
changes. After 1987, Novices were more the exception than the rule.

The two big questions now are:

- If/when S25.5 goes away, how long will it take FCC to dump Element 1?

- What other changes should be made to the license structure if/when that happens?

Back when there were CB licenses, I had KAAR5167.
That's a 4 letter prefix. Being CB, maybe there is a connection
between 4 letter calls and 4 letter words..... :-)

I don't think so. It's really tough to forge certain headers (for example, you can't really forge a path header, although you can obfuscate it a bit) and Google includes the NNTP-Posting-Host header as the valid IP address of the person using Google.

That IP address consistently points to Adelphia and traceroutes back to Monroeville, PA.

Sorry, Chris: You're busted.

AFAIC the end of the Novice license began when the Tech (with 5wpm code) was awarded all Novice HF privvileges. I'm not so sure that they shouldn't have done away with the Tech license and kept the Novice, not that it really makes any difference other than the name. At least the name Novice more accurately reflected the status of the holder of an entry level license.

In a sense, all coded hams hold novice licenses. Just that some also
have higher level licenses as well. As an Extra, I can operate any
novice frequency and mode, as well as other freqs and modes
not available to novices. Thus in a sense an extra licensee also has
an advanced, a general, a tech plus, a tech and a novice license.
But you only get to have one callsign!

And as I haven't done any code in something like twenty years, I could
perform about as well as a new novice..... Actually worse. :-(So I'm not gonna
do code in the extra subbands at first.

To achieve true dumbing down, you'd have to declare that the 27MHz
CB band and its users are hams, with a grade of license one step lower
than "novice".

:-)

I agree. And I think it's a shame he couldn't have just put his two cents in and joined Amateur Radio, code tested or not. He could have been an asset. As I have acknowledged before, his apparent knowledge is great...Too bad he can only share it when it suits a particular rant.

>I think it was Jon Bloom, KE3Z, who showed from old Callbook data that the
>number of new licenses did surge after 1991, only to slowly fade back to

Gee guy. Do you really want to reduce the numbers of licensed
operators? Now as far as forgetting things, I am a Technician class
that recievied my license 2 1/2 years ago. I just bought a Ft-8900r
and wanted to make sure what freq's I am allowed to be. Darn if that
Gordon West book didn't look like something I had never seen before
even though it had been my constant companion a few years ago.

I'm going to take the Gordon West General class book to work for my
lunch periods since it was embarassing to me to see what I have
forgot. Might as well try to upgrade.

Larry,

The direction of what even caught my mind when I originally heard this discussion and decided to post it here for further discussion was I was looking at the district map and wondering myself about something. Say for instance, California which is it's own call district, and the "7" land which is quite a few states, and California ran out of calls, could they shift the lines to make part of California in the "7" land?? I highly doubt this would happen anyways, in regards to California running out of calls, it was more of one of those "what if's."

I see this being done alot with the phone area codes. (YES I KNOW PHONES ARE NOT AMATEUR RADIO!) Michigan used to have only 4 area codes (616, 517, 313, and 906) and now has 7 more area codes. Like I said, phones aren't ham radio, but there is similarity in regards to the districts.

(more below)

> Ryan:
>
> Call sign districts are simply geographically-based assignments of the
> call sign "number." The original intent was to identify the operator by
> geographical region within the U.S. and it's territories/possessions while
> operating. The Vanity Call Sign system scrapped this useful feature, and
> now the "district" numbers are essentially meaningless, since any ham

Thanks Larry... like I had responded to I believe Mike was, that the code/no-code arguments seem to be getting to the point of like the dog chasing its tail and never actually catching it. Just going round and round

in a circle. Just wanted to see some other debates on some other topics
without the "wars" starting, but invariably that seems to happen anyways.

>>>>> "Mike" == Mike Coslo <mcoslo@adelphia.net> writes:

Mike> I don't do public service because:

* I don't have a good location.
I have yet to get my HF rig to work at home due to interference and
being stuck in a narrow valley between two high ridges. My wife
chose the apartment before we got married and she's not a ham.

Not all of the public service activities are things to do working from home.
Some actually involve leaving the residence. Unless you are house-bound,
there is alot to do out there.

* I don't have good equipment.
My VHF stuff is limited to running xastir on a 5W HT. A bit more
money and time, and I'll have a good APRS station that can run off
battery for 48hrs, but that's not now.

Alot of public service activities outside of NTS are locally based and can
be done with an HT. Does your local club or ARES/RACES group perform
communications for the various races/walks/runs?? An excellent chance to
learn and usually fun.

* I don't have any training.
I haven't yet spent the time or the money to take the ARRL courses
or to work with local volunteers on ARES and RACES operations.

Get involved. The ARRL course is expensive but there is alot of free
training via the EMI link at www.training.fema.gov site. IS-2 is required
for RACES, but there is alot of other courses there that are worthwile.
Fema will send you the materials to study for free and you can submit your
final exam answers online. Red Cross and your local ARES/RACES groups will
also have "some" training available too... Just takes getting involved.

Luckily for me, all three of those problems can be solved over the
course of a year or two, given enough stability in the rest of my
life. Maybe I'll have a different answer next year.

Good Luck!

Message-ID: <b961id$fj4dp$10@ID-189073.news.dfncis.de>
Source record: 66597

Well.. my activities in and out of ham radio are:

Net participation (holding nets and participating)
Public service activities (various runs, bike-a-thons, walks etc.)
Teaching ham classes for the tech level license
Teaching FEMA IS courses coming up in the upcoming months.
Was PR/publicity manager for local club for 2 years
Will get into more of the NTS activities in the future I hope

Outside of ham radio?

Volunteer Firefighter (will be moving to full time position in the future...
hope to find a dept. that will allow me to do both!)
Achieving my Instructor certification for Red Cross CPR and First Aid
Participated in adopt-a-highway program
Participated in big brothers
Have done various tasks to assist with the poor. (serving/delivering food,
home repairs and maintenance issues etc.)
Work with the local Volunteer Action Center to fullfill needs where needed.

My family has always been involved with public service and employed in
public service in some capacities for the past 3 generations or so as best
as I can find out. Doing good gives me a good feeling and some of the types
of work performed gives one a really different persective on life.

Well Larry,

What about outside of ham radio?? That was part of the original post.

There is alot to be done with public service activities in ham radio.
Consider being net control for an upcoming race/run/bike-a-thon etc??? Or
just plain participating? Great chance to meet and work with other hams in
your area. There is alot to do, where you don't have to be Superham, or
cop/firefighter/emt either. It is merely just a matter of getting
involved, participating and working TOGETHER to achieve a common goal.

Well thank you for stating the obvious Len, as that can be easily referenced
by looking at the applicable rules and regulations.....

Possibly there might be a benefit of changing the rules to make even more
questions necessary for each element. But wait a minute, I just realized
something, maybe they should lower the amount of questions for one reason
and one reason only. If you take a 10 question test, and the minimum
passing grade is 75%, then missing 3 questions would really "screw" a
person. If they are taking a 100 question test, missing 3 would still keep
them in the 90% ranges.

True, but if most of the hams are people that are in bed by 9pm or 10pm, and that is when I am usually just starting my day, I am sure you can see the limitations there. Not complaining about it, just an observation. Till my schedule changes I will just have to make do.

That's old.

> You keep touting morse code all the time and morse code
> was first used in 1844, 159 years ago.

So 107 is not "old" but 159 is "old"?

Besides, the code and methods used in radiotelegraphy are different from those
used in wire telegraphy.
>
> You seem to be posting out of spite.

Not me. I'm not the one making fun of other people's names, ethnicities,
gender, military service, education or employment. You are.

(snip of still more of Len living in the past)
Big station, many thousands of messages per month.

> Long-distance communications for commercial and government
> communications is now done via fiber-optic cable or satellite
> relay.

Satellites are old technology. Fiber is the way of the future. I recall some
posts where you had to be brought up-to-date on the capabilites of modern
fiber-optic communications.

> Fast, efficient, much more reliable.

Sure. But this isn't a fiber-optic or satellite newsgroup.

> Radio amateurs
> still stick to HF bands for the majority of their communications,
> the same as what others did a half century ago.

Even if true (you have not presented any evidence of communications-per-band to
back up your claim), so what?
>
Are you saying HF radio is obsolete? Sure sounds like it.

> Since the 1950s I've communicated by 100 WPM mechanical
> teleprinters,

(snip of still more of Len living in the past).

Did you do all those things on your own tiime, Len, paid for with your own
money and installed in your home and/or vehicle?

Or were they part of your JOB, paid for and supported by others?

> I didn't sit back and rest on morse code use glory in only
> amateur radio as you APPEAR to do, Jimmie.

So what's your complaint?

And why the diminutives? Do you think it makes you sound "professional"?
>
>>So? Do you think no one else here has a patent?
>
> Kellie has ONE patent for a bearing that does not need
> lubrication.

Who is "Kellie"? Do you mean W3RV?

> A Delphion search doesn't show any "Miccolis"
> patent. Cecil Moore

(W5DXP, ex-W6RCA)

> had several patents in electronics,

But not in radio.

> but Cecil got tired of all the PCTA

[expletive deleted]

> and went to another newsgroup.

Incorrect. Cecil has been a mainstay of the antenna newsgroup for years. He stated that he never posted seriously to rrap, and that with the restructuring of 2000 he was satisfied with the way things had changed. In fact, Cecil said he was resigning his No-Code International membership, because he thought a single 5 wpm code test was the right level of testing.

> I recall Jim Kelley

(AC6XG)

> claiming a patent
> on some golf-related thing but I never searched for that to
> examine it.
>
> Do YOU have a patent?

Do your own homework, Len.

I predict that if you did discover a patent or patents listing me as inventor or co-inventor, you would simply use it as another path of ridicule and insult. So I'm not going to help you.
>
> Have YOU published any paper in a professional association
> or academic institution publication?

Yes.

> If so, when and where?

I predict that if you did discover a paper or papers listing me as author or co-author, you would simply use it as another path of ridicule and insult. So I'm not going to help you.

Do your own homework, Len. You obviously have the time.
>
> The IEEE History Center

(snip of still more of Len living in the past).
>
> There's also the Radio Club of America, a membership
> organization open to all involved now or then in radio. It was
> formed in 1909 (5 year before ARRL) and still exists.

How many members? How much involvement in AMATEUR radio?

Sounds like you are telling me to shut up, Len. Sounds like you don't want me posting here anymore. You seem to be saying that free speech applies to you but not to others who disagree with you.

And again, you're mistaken.

So let me get this straight.

People who do public service are wannabes?

People who help charities with their events (yes Virginia, there are other ps events beside working nets) are overweight oddballs and social misfits? I guess that must go for the other people who work at those events too.

And as for the ps nets and ARES/RACES and the like, it's a pity that some people get personality mixed up with process.

A couple of you folks sound like subjects in the book, "Bowling Alone"

I belong to my county ARES group. I'm happy to assist in time of emergency. I'm pleased to attend meetings when it doesn't conflict with my schedule. I'm willing to provide communications in a search for a lost person, after a storm or in the aftermath of a flood.

What I don't do is participate in communications for a marathon race, a parade or in parking cars for the county fair. While one or more of those might be considered a public service by some, I don't view them as having anything to do with "emergency service".

> ago before they too got old and tired.

You probably should have tackled an amateur exam long ago--you know,
before you got too old and tired. Since the test is likely to go away
shortly, you might want to wait until you're older and more tired.

>
>Or were they part of your JOB, paid for and supported by others?

They had to be, Jim.

Lennie's one-and-only radio "license" clearly states he cannot operate a radio transmitter that does not have an FCC issued station license. So unless he's playing with Part 15 or Part 95 stuff, he's QRT.

(Garage door openers and TV remotes notwithstanding...)

>> I didn't sit back and rest on morse code use glory in only
>> amateur radio as you APPEAR to do, Jimmie.
>
>So what's your complaint?
>
>And why the diminutives? Do you think it makes you sound "professional"?

No....Lennie sits back and rests on his 1950s era radiotelephone operator license (now GROL) and his also 1950s era mmilitary service as "evidence" of experience in radiocommunication.

And "professional"...?!?! Jim, this twerp can't even send an e-mail without screwing it up (an "accident" by his own admission). This guy's no more an electronics "profesional" than my daughter is.

>Sounds like you are telling me to shut up, Len. Sounds like you don't want me

What matters in real life is what actually gets done, not theoretical
blue-sky stuff. All of the newsgroup postings in the world don't put a
station on the air or make any contacts.

Is there such a shortage of technically knowledgeable and able people
in amateur radio that we should kow-tow to certain people and beg them
to become hams? I don't think so!

> >I think it was Jon Bloom, KE3Z, who showed from old Callbook data that the

The surge after 1991 was bigger and lasted longer. The effects are
hard to gauge for a number of reasons, such as the 1994 changes in
vanity callsign rules.

>
> >The two big questions now are:
> >
> >- If/when S25.5 goes away, how long will it take FCC to dump Element 1?
>
> I bet they issue a news release suspending further Element 1 requirements
> until the NPRM process can be completed and formally deleted.

I agree partly - I don't think they'll even bother with an NPRM. I predict the only delaying factor will be how long it takes The Congress to ratify the new treaty.

FCC can rightfully say that they addressed all of the current issues concerning code testing during the 2000 restructuring process, and that there is no reason to go through all of that all over again. FCC's "no regulatory purpose" wording makes it clear that they are holding onto Element 1 just to satisfy S25.5. They can rightfully say "We went through the NPRM process more than 3 years ago, nothing has really changed, done deal, game over".

In fact, the rewording of Part 97 that is required to eliminate Element 1 is quite minor, and consists mostly of deletions. I think I wrote up a summary of what would be needed some time back. FCC might save some paperwork and just do it all at once.

OTOH, FCC could do the NPRM/R&O thing all over again, stretching the process out for a year or more. Could be 2005 by the time action is taken if they go that route. Look how long the 160 meter and "Novice refarming" proposals have been sitting.

Of course there's always a tiny chance S25.5 could survive WRC-2003, but I'm not holding my breath for that one!

I think the delays in getting S25.5 on the agenda have worked to aid in its repeal. Had it come up for a vote some years back, the chances of its being renewed would have been far greater than today.

> >- What other changes should be made to the license structure if/when that

408. Expanded 8-Band CB Channel Chart 10 metres

Newsgroup: rec.radio.amateur.policy
Date: 2003-05-05 18:31:37 UTC
From: valmont <radiola.news.invalid@web2news.net>
Message-ID: <28753N097@web2news.com>
Source record: 66459

NEWINGTON, CT, May 1, 2003--The FCC has requested the assistance of the ARRL Amateur Auxiliary/Official Observers in monitoring for illegal operation on the 10-meter amateur band. The request came in an April 28 letter from FCC Special Counsel Riley Hollingsworth, who says incursions on the band by apparently unlicensed operators continue to be a major enforcement headache.

From: Lou Franklin <lou@cbcintl.com>
Newsgroups: rec.radio.cb
Subject: Expanded 8-Band Channel Chart
Organization: CBC International
Reply-To: lou@cbcintl.com

FREE DOWNLOAD, 8-band expanded CB frequency chart shows 4 bands down, 3 up, + CB 40. Find where you are, 25.165 Ch.1 lowest band to 28.755 MHz Ch.40 highest band. Includes the skips too.

Download this (13Kb, 1-page PDF format/portrait layout) at:

www.cbcintl.com/docs/channels.pdf

We'll be adding more freebies as time permits. For links to those freebies we already have up, go to:

www.cbcintl.com/freebies.htm

Due to high demand, look for the xtal-mixing charts & block mixing diagrams covering about 95% of the most common AM and AM/SSB CB radios here. Lots of guys asking to "fill in the blanks" in order to replace a bad xtal or convert/expand these older rigs to new freqs.

Many thanks (again!) for all your great support these last 26 years!

Not emergency in the normal sense, where something happens and we
react. These are events where there can be an emergency like a lost
child or accident. But they are distinct from each other. And it gets
the word out that we exist.

Good work, Man! Doing good just for the doing good of it is about the highest form of civilization.

And another thing is if the conservative game plan is going to work, a lot of people are going to have to do public service. And oddly enough some of the most conservative people I know have a distinct hatred of public service.

In fairness to Larry's view, Dan, I've seen a number of the types he describes involved in amateur radio public service work both in Cincinnati and across the Ohio River in northern Kentucky. I've not encountered any of them in the West Virginia-Ohio-Pennsylvania tri-state area.

There are a number of ways to "give back" without being active in public service work.

Yep, seems you are :). Hey, who says "it ain't done in CW??!! Nearly every
training net I've directed, and anyone I've ever trained for NCS on EmCom
nets has been trained to incorporate CW practices/policies into their
training. In some of the ARES training nets I've conducted, we had
check-ins via CW, APRS, any and every band that someone was licensed for and
cared to check in through! Nearly every net I have been fortunate enough to
have either an NCS or ANCS that is CW capable.

Public Service events are the best/easiest/most convenient ways to learn and hone those very skills required under emergency conditions. Not to mention that public service events are, generally, a much more relaxed environment in which to learn and gain experience in communications and working with others.

Parking lot patrols do fall into the overall category of ham public
service, ham emergency comms are a subset of ham public service
activities. It's the sum total of such activities which matters wrt to
hams meeting the charter of the service.

Mike:

Us conservatives would probably be much more amenable to "public service"
if we weren't working so hard to pay the high taxes that support the Welfare
State which has been put in place in order to create dependency for the purpose
of keeping the liberal, Socialist, Democrat ideology permanently in power.
The simple fact is, the richer I get, the more generous I become -- with both
my money and my personal time. However, when I have to work twice as
hard just to carry my load and someone else's as well, then I have fewer
resources, personal or material, to devote to "public service."

Ryan:

Right now, it's a combination of both. I believe that the FCC does have
a valid purpose for defining limitations on mode and power for specific
frequencies. The ARRL also suggests further refinements which are
adhered to by all amateurs in the spirit of the FCC rule requiring us to
operate within the bounds of "good amateur practice." The present system
works, and I can think of way more reasons to keep it, than to eliminate it.

See above answer.

> And as for the ps nets and ARES/RACES and the like, it's a pity that
>some people get personality mixed up with process.

Yes, it is -- and the ones with the biggest personality problems are the ones who get into "public service" as No-Clue Technicians, and subsequently demand to be accepted as real, full-fledged hams, in spite of the fact that they only skill
they bring to the activity is the ability to push a button and talk.

> A couple of you folks sound like subjects in the book, "Bowling Alone"

Ryan:

The type of activities you describe probably annoy me more than the Public Service Hero types. Some technically-disinclined, operationally-challenged, no-nothing-at-all-about-radio gets a No-Clue Technician ticket and an HT, drags it to a few club meetings, and then shows up at the March of Dimes Walk-A-Thon expecting to be given a leading role in the amateur communications being provided. Again, it's all done for the personal glory -- the approval, appreciation, the being seen as someone doing something that nobody else can do -- even when this isn't true. The worst part is that all of this kind of "public service" activity is usually applied as justification
to reducing/eliminating the code testing and other challenging licensing requirements -- which has the effect of watering down the overall capabilities of the whole of the amateur radio service.

The grandmother, who is the XYL of an active ham, who gets her No-Clue Tech ticket and then carries her HT to the Walk-A-Thon is NOT my fellow ham in any respect whatsoever. She is a pretender; a dumbed-down fake; a wannabe, if you will. She can be replaced by any other grandmother and a GMRS/FRS/MURS handie-talkie. She has no more interest in or commitment to the ARS than her pet cat. All she is doing is borrowing a frequency.

>drags it to a few club meetings, and then shows up at the March of Dimes
>Walk-A-Thon

Often enough, these poeple show up at meetings, asking for Ham volunteers. It is not surprising that they show up at Ham meetings. Hams provide this "service" for free, something they would otherwise have to pay someone to do. In reality, the Hams that volunteer for these events are being taken advantage of.

>She can be replaced by any other grandmother and
>a GMRS/FRS/MURS handie-talkie.

True. Anyone can do these volunteer events. They could easily train someone, licensed or not, the same day to do it.

Also agree that Hams do these events to make Hams look like they are doing "public service".

>The worst part is that
>all of this kind of "public service" activity is usually applied as
>justification
>to reducing/eliminating the code testing and other challenging licensing
>requirements -- which has the effect of watering down the overall
>capabilities
>of the whole of the amateur radio service.

Wrong. It does not act as justification to eliminate code testing. It has NOTHING to do with code testing.

Its used by anyone, code or no-code, to make the hobby and themselves look like they do volunteer events.

Do you feel that way about all Technician class license holders? Doesn't sound like supporting the hobby. You know some of them have BSEE degree and can design circuits. Hardly just pushing a button.

Some of those with a BSEE are also smart enough NOT to learn code when they want to be good at other aspects.

That's a good point. If others need to hone their skills, let them do
the marathons, parades and car parking and that can be their public
service. I'll be here with honed skills when there is an emergency.

Dave K8MN

Mike Coslo writes:

>Obviously I am not nearly overweight enough to be a
>>> regular participant in Amateur Public Service events.

A significant percentage of Hams are fat, more so than the general population.

I have been at many types of Ham radio events in many locations. I understand the cult like nature (in a good way) that Ham radio often is.

I recently attended an event with a random group of Hams. I have been with large groups of Hams, at Hamfests. I have noticed most of them are fat. But one can say that only these types of Hams attend Hamfests. For example, N2EY has said that Hams at Hamfests are not typical Hams, just those that attend Hamfests.

So, to find typical Hams, one can find a small group of Hams. Recently, I recently joined a small group of Hams in their activities. (I even operated HF phone). Although, it is a small group of Hams, remember It was a completely random group.

There were 16 adults and 4 children. Out of the adults, 12 were significantly fat. Four, including myself, were not. None of the children were fat. You can be sure that I ate a normal quantity of food throughout the whole event. However, I cannot say the same for any of the other adults.

Breakfast was 3 French toast with plenty of syrup and sugar, bacon, sausage. Through they day several bottles of beer, chips, cookies were consumed. Also burgers, sausage hot dogs with cheese, chili, chicken wings, clam chowder, shrimp, chili. This was all consumed in one day. There were an estimated three lunch times. Dinner was the same items, left over from lunch. There was some food left over. Instead of throwing them away, they cooked it and had a post dinner meal.

Some time during the same say, a couple of people and me went to get ice cream. Then we went driving. The driver was so weak, his fat arms could hardly turn the steering wheel. We stopped and walked around. The same driver person made two stops at stores, ate a candy bar, and some cookies. Then on the way back, in the car, complained that he was hungry. Also, note that this special trip were ADDITIONAL eating times to the ones I mentioned in the previous paragraph.

Contests require less physical activity, and this could be a reason for the weight gain. I noticed that snacking occurred during the contests. Other interests, such as radio direction finding use more physical activity. If more Hams were interested in this, there would be fewer overweight Hams.

The Hams were a very nice group of people, so I feel bad about it. When Hams over eat, it hurts them. Hopefully, this may change in the future.

The adults were of course showing the children how to operate, etc. The children were eating the same fatty foods the adults were eating. If one uses some common sense, one can see that these children will be fat when they become adults. This is the future of Ham radio.

Joining costs almost nothing. It just takes a license in a day class. It SEEMS like there is alot of benefit for a small amount of effort (for the no-code license).

It could be that the narrow interests of contesting and antennas. Cult-like conventions, codewords, "contest" rules (which must be followed exactly), and Morse code pressure.

There ARE other things that can be done with amateur radio. The current group of Hams only seem to want to do things a certain way, and only bring new Hams that want to do things the same way.

As a result, some other people may not want to join amateur radio. I would not recommend any EE join the hobby, even if they were interested in rf. Only, if they were interested in antennas, would I recommend it.

Only by joining can one change the hobby for the better. Although, I would just get the privileges. Also, do not attend all meetings, find out the topic ahead of time, from the newsletter, and only attend the ones you like.

Changing the hobby for the better is a hopeless idea. I can tell you that. You will be alot happier not trying to change the hobby.

And that is the biggest reason why to do it in the first place. It's not the award of a piece of paper or a plaque being the reason for getting involved. (both in ham radio and outside as well) It is the feeling you get by helping out to make your community a better place. (use any definition of community here)

>

You are partially right on this one.... there are some right wingers that do get involved but not as much as they should. But there are many that do not get involved. The overwhelming majority of right-wingers are people with money, as I have never yet met a rich left winger who wasn't a politician. The attitude of the right-wingers I have seen is the "I got mine" attitude. A real way to help give back would be helping to show how "they got theirs," but not actually giving the money to them. (Give a man a fish analogy here)

Not to start anything, but if the above has any truth in
it, then why did that well known truck stop on I-80 just
get in a huge shipment of 11m amps from overseas? Seems
like the supply of 11m amps is bottomless. Also saw amps
for MURS freqs. on sale too. It doesn't take a rocket
scientist to figure out another smoke & mirrors show is
going on, plus maybe a few well placed bribes.

OK, Len, here goes. Just one example - there are others. btw, the
"Armed Forces of the United States" includes the Navy, Coast Guard,
Air Force and Marine Corps, not just the Army.

Did you ever have a "Radioman" rating, Len?

The following is a direct quote from Curtis LaFon, N5HDQ. Mr. LaFon is
a retired US Navy Radioman. He posted it here back on January 9, 1998.

BEGIN QUOTE:

"U.S. Navy RM "A" School, San Diego, Ca .. 1957-58 ... 24 WPM for 1
hour
with no more than 3 errors was required to graduate .. that was 5
letter code
groups, on what we called a comminications mill .. a manual typewriter
with
special keys .. all caps and the 1 was with the rest of the figures ..
not lower
case L like on most typewriters back then."

END QUOTE

The entire posting can be viewed by clicking on this link:

http://groups.google.com/groups?selm=34B705B1.4950%40wf.quik.com&oe=UTF-8&output=gplain

24 wpm of 5 letter code groups is 120 letters per minute. 7200 letters
per hour, with just 3 errors permitted. That's ONE error per 2400
letters - an error rate of .0417% - over a one-hour period.

Compare this to the most-difficult code test now required by the FCC
for an amateur license. 5 minutes of plain-language text at 5 wpm. It
is possible to pass that test with an error rate of 80% (just get one
minute of solid copy out of the five).

24 wpm code groups for an hour with .0417% maximum error on a manual
typewriter

vs.

5 wpm plain language for 5 minutes with 80% maximum error using a
variety of copying methods.

Also, amateurs can pass the test by methods other than one solid
minute of copy, can go back and correct errors in their copy, can use
any reasonable method of writing down the message, and can get a
variety of adaptations in the test.

> >- Ability to send highly readable code using either straight key or bug.
>
> Please state the "bug" (automatic keyer mechanism) nomenclature
> you actually used in your military communications experience.

Irrelevant. Amateur radio operators are not tested on code sending
ability anymore (stopped about 20 years ago). Military radio operators
were.
>
> >- Ability to adjust, troubleshoot, operate and repair a wide variety of types
> >of radio equipment
>
> Incorrect.

No, correct. Morse skills alone would not get someone a Radioman
rating. Other knowledge and skills were needed.
>

> >It's like the difference between finishing in the lead pack of the Boston
> >Marathon and being able to jog a mile on a track in less than 12 minutes.
>
> No military anywhere in the world operates on principles of
> sport. The purpose of a military is "to close with and destroy
> the enemy."

Again, you miss the point, Len.

The reason for military aptitude tests for code skill potential was NOT because basic code skills are unusual. It was because their requirements went far beyond basic code skills. The most difficult code test ever required for a US amateur license was far below the skill level required of military radio operators. The code test now required for the General and Extra class amateur licenses is far, far, FAR below the skill level required of military radio operators.

The mention of running is an analogy. Obviously it went over your head, Len.

> nice people.

I had a 2x3 call for ten years before I got this call. For seven of
those years I was an Extra.

While I'm no expert on contesting (or anything else), I have done
Field Day, November Sweepstakes, and a few other contests. Sending a
long callsign was a minor disadvantage, but there's also the fact that
the other op has to copy it and get it right. Six pieces of info vs.
four multiplied by several hundred contacts adds up.

All I use in contests is a Vibroplex bug (semiautomatic) and
pencil/paper log and dupe sheets.
>

> Jim> Second, it only works for those working stations who choose to

How many? How many of the 686,000+ US hams have you actually observed
for fatness?

> I recently attended an event with a random group of Hams.

How do you know it was a random group?

> I have been with

It is true. To get a random sample of hams, the selection process must
be truly random. Looking at who shows up at club meetings or hamfests
is not a random selection process.
>
> So, to find typical Hams, one can find a small group of Hams.

Just the opposite. You need a large group.

> Recently, I
> recently joined a small group of Hams in their activities. (I even operated HF
> phone).

No, the control operator did the operating. You "participated".

> Although, it is a small group of Hams, remember It was a completely

> I noticed that snacking occurred during the contests. Other
> interests, such as radio direction finding use more physical activity. If more
> Hams were interested in this, there would be fewer overweight Hams.

There's no doubt that the hams you have encountered were overweight.
But how do you know that they are a representative sample of the
population?
>
> The Hams were a very nice group of people, so I feel bad about it. When Hams
> over eat, it hurts them. Hopefully, this may change in the future.

> adults. This is the future of Ham radio.

It's not a radio problem, it's a problem of American culture. Food
here is inexpensive, plentiful, and delicious. Usually (and
unfortunately) the most inexpensive, plentiful and delicious food is

also the most fattening.

Add to this the fact that most Americans aren't required to have physically active lives, and the stage is set for the problems you see. Not just among radio amateurs but in the entire population.

Same reason the War on Drugs hasn't made a dent in drug imports despite $millions spent, lives ruined and really dangerous criminals released to make room for dopers. Given enough demand, there will always be a supply.

The only way to reduce either problem is to eliminate the demand. If I ran FCC I'd simply announce that there would be no more CB on HF after 1 Jan 2005; that all current CB freq's would be allocated to SSB for Tech's using <250W and other hams using legal limit.
My 2 cents

>Did you ever have a "Radioman" rating, Len?

Jimmie, open your morse-besotted mind to some facts instead
of wandering around like a spoiled child, waving your clenched
fists in anger at not being respected in a world of adults.

You've made so many errors, misdirections, accusations in
this post that you MUST be corrected in public. Tsk, tsk, tsk.

First of all the armed forces of the United States doesn't have
"ratings." It has MILITARY OCCUPATION SPECIALTIES,
commonly called "MOSs."

The US Army never had any MOS of "radioman." That is a
US Navy MOS nomenclature.

You've never been in any US military branch so you wouldn't
know. You apparently never went to the US Army website I
posted in this newsgroup TWICE to find out...or to try any
link on that site to find out other US military branch MOSs
and job descriptions.

All you want to do is ARGUE. You are wasting everyone's
time. You've already been told, given the resources, and
still you want to argue, argue, argue for no other reason than
to satisfy your childish tantrums.

Perhaps the closest Army MOS to a USN "Radioman" was
Field Radio Operator and Maintainer of the 1950s. Those soldiers
were required to graduate an Army morse code school and ALSO
be able to carry/mount transportable radios, set them up (including
antennas of many different sizes), take them down (for use else-
where), and perform elementary troubleshooting and repair if such
was required.

USN "Radiomen" operated radios rather fixed in position aboard
naval vessels or on shore stations, did not have to set them up
or take them down for use elsewhere...the ship moved to new
positions carrying both equipment and personnel together. Can
you grasp that concept? There are NO ships ON land. Trucks
and other vehicles on land do the transport on land for heavy
equipment while individual soldiers carried man-portable radios.
Both today and a half century ago, the majority of all US Army
radios are/were "manpack," meaning they were/are carried by
individual soldiers on foot. Can you grasp THAT concept?

Both today and a half century ago, US Army soldiers are LAND
warfighters FIRST, the military occupation specialty being
secondary to that primary task. All US Army soldiers receive
basic infantryman training and continue to practice and updating

infantryman skills throughout their career. One of the major differences between soldiers and sailors is that soldiers are in territory on land in very close proximity to an enemy relative to sailors on shipboard. [another concept which may not be grasped...Jimmie's problem since he never served in any branch of the US military]

>The following is a direct quote from Curtis LaFon, N5HDQ. Mr. LaFon is
>a retired US Navy Radioman. He posted it here back on January 9, 1998.

Belay that, swabbie-wannabe.

This is the year 2003. It is NOT five years and three months ago.

TRY, oh really TRY to stay current with the existing flow.

You are totally wasting everyone's time quoting message exchanges from over 5 years ago. Those exchanges are OVER, done with, cannot be resurrected from the dead past in hopes that you will win some of those you lost.

The US Navy NO LONGER USES any on-off manual telegraphy for radio communications. It hasn't done so for many years.

The US Army NO LONGER USES any on-off manual telegraphy for radio communications. It hasn't done so for many years.

The US Air Force NO LONGER USES any on-off manual telegraphy for radio communications. It quit doing that ahead of all the other US military branches.

The US Coast Guard MIGHT use some manual telegraphy on the great lakes. USCG QUIT monitoring the maritime international distress frequency of 500 KHz some years ago. USCG is the smallest branch of the military and isn't strictly military during periods of peacetime.

>24 wpm of 5 letter code groups is 120 letters per minute. 7200 letters
>per hour, with just 3 errors permitted. That's ONE error per 2400
>letters - an error rate of .0417% - over a one-hour period.

BFD. ANY error may be fatal in a five-letter-group encrypted message. I don't think you grasp that concept at all.

In amateur hobby/recreation communications one can handle errors and garble in cleartext quite easily. Such an error has no tactical or strategic importance compared to sensitive military communications.

One of the reasons the US Navy began using teleprinters for encrypted communications in 1939 was the ERROR rate in manual morse code telegraphy. Not only that, teleprinters could "stand watch" (a nautical term in the military) 24/7 on an important frequency. Teleprinters need only their paper

rolls and tape replenished...they don't need sleep, food, or any necessary human being needs away from the comm gear.

But...but...this message thread is all about the NOVICE CLASS amateur radio license, isn't it? Amateur radio is NOT military or even close to military communications. The Novice Class license is no longer being granted. It will disappear when the last novice class renewal time is up. Gone.

So, why are you in such a big dither about MILITARY radio, Jimmie? You've never served, haven't indicated you've ever seen any military radio communications in progress, don't seem to know squat about military comm.

You are in such a state of concern for only one reason: To try to "get back" at someone who has challenged your radio expertise in the past and continues to do so. You carry on in childish rants about "accuracy" when all you want to do is make message points and personal triumphs in the newsgroup.

You don't seem to care about the future, newcomers in ham radio not yet licensed, or anything but those who Believe as You do. You just can't shake that Belief in morse code as needed in amateur radio.

>No, correct. Morse skills alone would not get someone a Radioman
>rating. Other knowledge and skills were needed.

Yes, first one had to join the US Navy and go through Boot Camp.

Beyond that what do YOU know?

You don't know. You've never served in any US military branch, wartime or peacetime. You've never taken that Oath. You've never put your life on the line anytime, anywhere for your country.

Your only connection to military radio is OLD data, surplus radio equipment, electronics from the PAST.

>The reason for military aptitude tests for code skill potential was
>NOT because basic code skills are unusual. It was because their
>requirements went far beyond basic code skills.

Ah, yes, the authoritative voice of the military again...not just from someone who never served, but someone who never instituted any battery of military recruit aptitude skills, someone who never had to argue that for any military review board.

You've gotten terribly confused with what you are trying to argue.

The message thread Subject header says "Novice Class license."

"Novice class license" only exist in AMATEUR RADIO. Amateur radio is NOT military, never was. Amateur radio is a hobby, a

recreational pursuit.

You've lost everything on arguments either for or against saving any Novice Class license.

You are all hung up and petty about some military requirement of the past, desperately seeking to avenge some perceived past hurts from messaging of 5 years ago.

You've lost it.

Quit wasting everyone's time with your petty desires.

Hey Dee.....you can't argue with a turnip. Neither 'Vshah101', or 'Len over 21' are licensed. I guess the real issue is why bother with someone that ain't been there and done that.

There minds are already made up. All they are doing is keeping the arguements going. Apparantly neither have a life.

You obviously do, and so do the rest of us. If it don't meet their approval....so what?

See ya in the sweeps next time.

You keep stating this nonsensical rubbish. Please identify the amateur club by name and location that fits this description. This certainly does not describe any club that I've ever belonged to.

There are absolutely NO codewords in amateur (ham) radio. All specialized terms are clearly defined in the amateur radio reference books. Every activity has its specialized vocabulary. There is nothing unique about amateur (ham) radio in this regard.

>
> There ARE other things that can be done with amateur radio. The current

Sorry, Mr. Turnip, I'm licensed and been licensed longer than you
have. One of those licenses isn't in AMATEUR radio. :-)

>I guess the real issue is why bother with someone that
>ain't been there and done that.

Sometimes I wonder why the FCC puts up with amateurs.

FCC doesn't require any commissioner or staff to have
amateur licenses in order to REGULATE amateur radio. :-)

>There minds are already made up.

Translation: We won't switch to your fantasy island thinking.

>All they are doing is keeping the arguements going.

"Arguements?" :-)

So...you feel that everyone MUST think as you do?

Why is that? Are you the supreme judge of something?

>Apparantly neither have a life.

I don't know about Vipul Shah, but I not only have a nice life but
have made a whole career as a professional in electronics and
radio. I'm married to a wonderful woman who was my high
school sweetheart. We own two houses, debt free, in Washington
and California. Both my wife and I have comfortable incomes even
though we are both retired.

>You obviously do, and so do the rest of us.

All morsemen have wonderful lives in their own minds, bound
and determined to keep up a living museum of the air on
archaic radiotelegraphy.

I wish you all well.

Now, why in the world do you and other morsemen need laws to cram morse code ability down all amateur radio newcomers' throats?

What's wrong with "live and let live?"

>If it don't meet their approval....so what?

Good question. Apparently morsemen are so narrowly tunnel-vision focussed on morse code ability...or so enchanted with themselves and their mighty accomplishments in archaic radio...that they cannot see their self-righteous eliteism through keeping outdated law will only hurt them in the long run.

Mighty morsemen are not only maintaining this Archaic Radio-telegraphy Society but are also living in a Fantasyland, one where everything stopped advancing when they were first licensed. They cannot understand progress, only their own stunted abilities bound up in a unique, singular skill that is no longer needed in the rest of the radio world or all society.

There is NO arguing with mighty morsemen of the Archaic Radiotelegraphy Society. They are locked in, captives of the Belief System of the Church of St. Hiram.

But some of us are optimistically trying to free mighty morse-men from their own morse-besotted Beliefs. Maybe it is too ideal an optimism. We keep on trying while the mighty morse-men are just trying everyone else's patience. :-)

Not at all. It is a book written by Robert Putnam, based on how
Americans are becoming less and less socially connected with each other.
It is based on many interviews. The title comes from the author noting
that while more people bowl than ever before, most do it by themselves
and not in leagues. We're becoming insular.

"In the Beginning" CB calls were issued by the FCC District
Office and were of the format nnWnnnn where the first "nn" was the
FCC District number and the "nnnn" was a sequential number for
each district.

"Later On" when the Gettysburg License Center was opened, CB
licenses were issued from there and call signs were 3+4 format
such as KBA1234. KAA calls were reserved for GMRS. When they ran
out of 3+4 calls, the 4+4 format came in. I don't even remember
what my ex-wife's CB call was.....

But that's CB - not ham radio.

When I have three ops at a console passing status messages in
the inter-hospital net, the above-cited skill is exactly what I
would want them to have. The only other skills that I would
want in an operator is the ability to type a packet message
(two-finger typing is OK) and the ability to keep their wits
about them.

In our ARES/RACES operation, "No-Code Techs" with the
above-cited skills are far better than the old farts of any age
who rant and rave about the lack of taking a CW test. Then
again, we've weeded out the latter by giving them -real- work
to do during an exercise, and watching them scurry back into
the woodwork.

--

It's not an FCC call sign - it's an FAA registration number.

FCC Rules s. 87.107(a)(3) provides that the FAA registration number minus the "N" can be used when it follows the type of aircraft INSTEAD of an FCC-issued call sign, . The proper radio identification of the above aircraft would be "Beech 2 Echo Yankee".

I got this from the FCC Call Sign Desk in the 1980s when California DMV asked for an opinion as to whether an amateur call-sign-lookalike aircraft "tail number" was an FCC call sign or not. Apparently an aircraft owner wanted to use his 1x2 N-number on a personalized license plate - under California vehicle law, if it looks like a ham call, it can only be issued as a ham plate and only if the license holder thereof is one of the registered owners of the vehicle.

>> A significant percentage of Hams are fat, more so than the general
>population.
>
>How do you know?

It stood out when I was attending Hamfests. By the way, the Hams I saw on ATV that day often (but not always) were overweight also. And, Hams are often antisocial (but in a good way, I guess).

>> I have been at many types of Ham radio events in many locations.
>
>How many? How many of the 686,000+ US hams have you actually observed
>for fatness?

You can apply this argument to anything. By this logic, nothing is known.

>> I recently attended an event with a random group of Hams.
>
>How do you know it was a random group?

I did not know any of these Hams before. There were no photos of the people in the ad. No indication of their weight was given by the text.

Also, I know it was random because they invited Hams to attend. I happened to be on the mailing list. It is random from my perspective who actually attended this event. There were a few new people, like me, that did not attend before.

It was a general activity Ham gathering. (I did PSK31, SSB, ATV, some satellite, some HF phone).

>To get a random sample of hams, the selection process must
>be truly random.

The selection process was completely random here. I chose to attend because they had many radio modes I could operate.

>Looking at who shows up at club meetings or hamfests
>is not a random selection process.

Almost any Ham would attend a Hamfest. I don't know of any reason why more overweight people would chose to attend Hamfests.

>> So, to find typical Hams, one can find a small group of Hams.
>
>Just the opposite. You need a large group.

Hamfests are a large group. Also, surveys have been done. Its also common sense observation.

>You can
>> be sure that I ate a normal quantity of food throughout the whole event.
>> However, I cannot say the same for any of the other adults.
>
>Did you actually weigh anyone or compute anyone's BMI?

I did not have to weigh anyone. The 12 that I counted were so overweight, there was no doubt that they were overweight. They did eat a large quantity of <high fat> food, including French toast, bacon, sausage, hamburger, fatty cold cuts, and cheese.

>This was all consumed in one day.
>By whom?

It was not hard to miss that EACH one of them ate a huge quantity of high fat foods. In fact, they ate more than I saw them eat. I know they ate the shrimp when I was out on my trip.

>20 people can eat a lot of food over the course of a day.

This proves it.

>I gotta get me some of that.

There was plenty of food left over. Some beer were shared with others that joined the event for a few minutes. Yes, the free food is one good part of some Ham events. I try to make use of events that have food served. You can do the same - its fun!

It was a fun experience at a very low cost. I got to operate many modes, enjoyed touring the town, and had good food and good company. Will I attend next year? Sure! I plan on it, if I am not busy.

>> Contests require less physical activity, and this could be a reason for the
>> weight gain.
>
>Nope.

I noticed that there were 30+ cyclists near the event. None of them were fat. The events one participate in do seem to affect people's weight.

Contesting requires you to sit in one place for a period of time. The lack of activity does not help one's weight.

If more people participated in radio direction finding, less would be overweight. Radio direction finding requires one to move around to find a signal. Also, its a more fun activity <to me> than contesting.

>It's not a radio problem, it's a problem of American culture.

True, any event, like this, seems to bring such foods. For example, certain people that get together for sporting events often have these types of foods there.

They just went unbelievably overboard.

>by name and location that fits this description.

The four closest clubs to me, the event I recently attended (not a close by group), any Hamfest i've been to. The several states i've heard Hams on while travelling.

A Ham may not realize they are different.

>Please state these "other things". I'd bet there are several people in our
>local club that do them.

Hams do not like: experimenting with circuits, troubleshooting, tuning, radio direction finding.

Hams love: contesting, antennas, HF,CW, collecting cards, ragchewing.

I have a Technician class license.

>Apparantly neither have a life.
>
>You obviously do, and so do the rest of us.

Hams are often anti-social. I have noticed this at Hamfests. The event I recently attended also supports this. Hamfests cover a large group of people, <almost> all Hams, and a significant indication of what represents the social aspect of Ham radio.

Also, note that people often were curious about the Ham station. They saw a bunch of antennas and cars slowed down. Some people did get out of their cars and visit the station. However, seeing a bunch of overwiegh people doing these activities was not the greatest advertisement of Ham radio.

Hams have fun within their group. One can define radio as a life, but this would be changing the definition to fit the minority. The defintion fits what the majority of people do, and some common sense on what is acceptable behavior.

-Chanting Wuoff Hong, for example, is not.
-Waiting three hours (with no events in between) to do any activity, is not.
-Operating radio all the time, instead of as one of the events, is not.
-Operating radio, at hours when no normal person would, is not.

Seems like a club for the anti-social.

Why not sit and ponder the matter for a few days and let us know if you
come up with anything?

> Working out of band Frenchmen?

I am not responsible for enforcing amateur radio regs in France. As has
been suggested numerous times, you need to take your case to the French
PTT and the REF.

It's volunteerism. It's volunteerism. Its volunteerism. Sheesh.

At any of these events, there are dozens of volunteers. How about dome
disparaging remarks about the organizers? Why are the hams the ones
taken advantadge of?

>>She can be replaced by any other grandmother and
>>a GMRS/FRS/MURS handie-talkie.
>

Both of ya just don't get it. It isn't what you do when everything is
going fine. It's what you do when there is a problem. You have to keep
your cool and do your job. People get hurt and get lost.

> Also agree that Hams do these events to make Hams look like they are doing

Vipul, I do these because I like to do them, not because I want to look like I'm doing anything. It's more real than just giving money to a charity, it's getting right down at street level with something that the organizers appreciate, as well as the people who they are working for.

I recently attended a meeting of about 30 hams. Of those in attendance,
all were shorter than me. About half were under about 5'7". Only two
were above 6 feet. I was the tallest at 6'3". Using your research
method, we can safely assume that most hams are short.

You've got yourself some great junk science, Vipul.

> Contests require less physical activity, and this could be a reason for the
> weight gain. I noticed that snacking occurred during the contests.

Most serious contesters eat very little during the course of a contest.

> Other
> interests, such as radio direction finding use more physical activity.

Direction finding uses very little energy. The running in Fox hunting
on foot uses a lot of energy. Some Fox hunts uses mobile rigs mounted
in automobiles. Very little energy used there.

What does your theory prove?

> If more
> Hams were interested in this, there would be fewer overweight Hams.

Many hams watch television. One actually burns less calories watching
TV than in sleeping. Go figure!

HAR! Yes, you use the method I used to use when a Hockey parent would bitch and moan about something. I'd thank them kindly for their concern, noting how we need more people to express their concerns. Then I'd give them a job to do. About 90 percent went away and never complained again. The others actually did help.

<w4nti@NOSPAMmindspring.com> writes:

>Hey Dee.....you can't argue with a turnip.

I know we can't, Dan...we've tried to argue with you for years...:-)

>Neither 'Vshah101', or 'Len over 21' are licensed.

Sorry, Mr. Turnip, I'm licensed and been licensed longer than you
have. One of those licenses isn't in AMATEUR radio. :-)

>I guess the real issue is why bother with someone that
>ain't been there and done that.

Sometimes I wonder why the FCC puts up with amateurs.

FCC doesn't require any commissioner or staff to have
amateur licenses in order to REGULATE amateur radio. :-)

>There minds are already made up.

Translation: We won't switch to your fantasy island thinking.

>All they are doing is keeping the arguements going.

"Arguements?" :-)

So...you feel that everyone MUST think as you do?

Why is that? Are you the supreme judge of something?

>Apparantly neither have a life.

I don't know about Vipul Shah, but I not only have a nice life but
have made a whole career as a professional in electronics and
radio. I'm married to a wonderful woman who was my high
school sweetheart. We own two houses, debt free, in Washington
and California. Both my wife and I have comfortable incomes even
though we are both retired.

>You obviously do, and so do the rest of us.

All morsemen have wonderful lives in their own minds, bound
and determined to keep up a living museum of the air on
archaic radiotelegraphy.

I wish you all well.

Now, why in the world do you and other morsemen need laws to cram morse code ability down all amateur radio newcomers' throats?

What's wrong with "live and let live?"

>If it don't meet their approval....so what?

Good question. Apparently morsemen are so narrowly tunnel-vision focussed on morse code ability...or so enchanted with themselves and their mighty accomplishments in archaic radio...that they cannot see their self-righteous eliteism through keeping outdated law will only hurt them in the long run.

Mighty morsemen are not only maintaining this Archaic Radio-telegraphy Society but are also living in a Fantasyland, one where everything stopped advancing when they were first licensed. They cannot understand progress, only their own stunted abilities bound up in a unique, singular skill that is no longer needed in the rest of the radio world or all society.

There is NO arguing with mighty morsemen of the Archaic Radiotelegraphy Society. They are locked in, captives of the Belief System of the Church of St. Hiram.

But some of us are optimistically trying to free mighty morse-men from their own morse-besotted Beliefs. Maybe it is too ideal an optimism. We keep on trying while the mighty morse-men are just trying everyone else's patience. :-)

Okay.... then next question for ya, for the sake of argument. Who says that the ARRL's suggestions meet within the bounds of "good amateur practice" then?

I am not suggesting elimination, just a clearly defined bandplan for each band where even modes are clearly spelled out for each band. Upon using search engines, there have been some discrepancies I have found. Things such as calling frequencies etc, as well as exact breakdowns of different modes within the specific band edges have shown to be different. And I believe the FCC should be mandating that as long as they are still issuing licenses, not Newington.

They probably weren't aware that they should consult with you.

> FCC doesn't require any commissioner or staff to have
> amateur licenses in order to REGULATE amateur radio. :-)

That's right. They're paid to regulate. It is part of the job.

> >Apparantly neither have a life.
>

If you can have a nice life in your mind, we can have nice lives in our
minds.

> I wish you all well.

You don't sound very sincere.

> Now, why in the world do you and other morsemen need laws to
> cram morse code ability down all amateur radio newcomers'
> throats?

Why in the world do you think you can force anyone to share your beliefs
about morse testing or a minimum age for participation in amateur radio?

> What's wrong with "live and let live?"

Go live.

> Mighty morsemen are not only maintaining this Archaic Radio-
> telegraphy Society but are also living in a Fantasyland, one
> where everything stopped advancing when they were first
> licensed. They cannot understand progress, only their own
> stunted abilities bound up in a unique, singular skill that is no
> longer needed in the rest of the radio world or all society.

Amateur radio has changed quite a bit since I first became a ham forty
years back. The singular skill to which you refer is used daily by
thousands on the amateur bands. I don't live in a fantasy land and I
understand progress. How's your progess on getting up to five wpm?

> There is NO arguing with mighty morsemen of the Archaic
> Radiotelegraphy Society. They are locked in, captives of the
> Belief System of the Church of St. Hiram.

You mean there are those here who disagree with you and that honks you
off.

> But some of us are optimistically trying to free mighty morse-
> men from their own morse-besotted Beliefs. Maybe it is too
> ideal an optimism. We keep on trying while the mighty morse-
> men are just trying everyone else's patience. :-)

Izzat in your role as self-appointed "advocate" for something or other?

Wow.... I definitely am sorry that you have been exposed to these alleged
types of situations to create these mere opinions. I can only speak of
local experience, but I have yet to find someone that fits into that
category as described above. Furthermore I have never seen someone working
these events, promoting the whole code issue simulataneously.
Locally speaking, the people I know that are getting involved are getting

involved, for the right reasons; to help out their community, and do not do it for some type of tangible award. The award is a personal feeling of doing something good. If doing something good is against your ethics apparently from this post, then one could extract that you condone doing bad things then. (In regards to locally speaking, there is a wide cross-section of people with different license classes and dates they got the licenses. The most unselfish people with the desire to help out with no personal gain other than a feeling of doing good are the PCTA general thru extra class licensee's that were licensed in the 70's and before, and the newly licensed. The ones in the middle are the only ones that *may* be what you were describing.)

Wow... it is almost astonishing to see the level of bitterness and broad-sweeping generalities. I hope you learn to deal with this bitterness in a positive way before it consumes you. It is is attitudes like this that bring the amateur service "one step closer to extinction."

Try to have a better day,

Since Larry can make broad-sweeping generalities, here I go with one.
Tpyically a majority of hams I have ever met are the introverted,
stay-at-home types that only get out once in a while and only become
extroverted in any sense when behind a microphone, keyer or keyboard.
Although there may be a quantity of ham's that are physically active, most
aren't.

How about encouraging more "bicycle mobiles" out there?? Hell, when I go
riding, I throw an HT in a pocket just in case of an emergency. Once it
actually came in handy, as I ran across someone who got stung by a bee on
the local rail-trail, and was having a severe allergic reaction. Being able
to bring up the autopatch, and getting emergency help there rather quickly
probably their day a little better than if they had to wait alot longer to
get help. True that this could have been done with a cellphone but I still
rather carry the HT.

Bingo Jim,

This was a strong topic of discussion recently at a local continuing education credits session I went to as a requirement of my medical licensure. The typical lifestyle 50-75 years ago involved a hell of alot more work on a day-to-day basis, be it doing chores or having to work multiple jobs and that is not the same now. Technology is partially to blame.....

Yes, Keith, please pass along your call sign.

If you suggest digital means, I'll agree with you. If you suggest AM, FM, or SSB, I will disagree. I have put 40 words per minute perfect copy on a typewriter (and no need to think I couldn't put it into a computer). No big deal, except when you get to difficult spellings of street names or surnames or whatever ... well, you get the idea. Digital is the way to go. If not that, cw is better than voice. Believe it or not.

Incorrect. All that YOU can see is what I've written here. Some other readers know a lot more about my work experience.

It's quite clear that no matter what work experience I have, you would find a way to ridicule and insult the work, my empoyers, and me. We've all seen you do it many times. You even make fun of other veterans' military service. So why should anyone give you details?

No, that is incorrect. CB calls were issued by the
FCC Division office and were in format nWxnnnn where
the first "n" was the FCC division number and the "Wxnnnn"
was the spec op random number for each division.

> "Later On" when the Gettysburg License Center was opened, CB

BZZZZZZZT! wrong again. Soon after the CB call was
issued they reverted to a spec category of random intended call
signs per an agreement with the ITU.

So all we have is your memory of a discussion of an alleged Army regulation of
a half-century ago. We have the name of one officer, who is unavailable to
comment today.

The Army is not the entire "Armed Forces of the United States", btw.

It has been clearly shown in another post that the level of Morse skill
required of Morse-skilled US military radio operators was far, far, FAR above
that required to pass the current amateur test.
>>
>>The "Armed Forces of the United States" used those aptitude tests to find

WHY?
>
(N2EY)
> has NO such experience, hasn't seen an AR, didn't
> even fall under the Uniform Code of Military Justice at any time..

Why do you ask a question if you know the answer?

And what difference does my military experience or lack therof have on the
simple fact that:

The "Armed Forces of the United States" used those aptitude tests to find
the recruits who would be easiest to train to the skill level they required.
The
required military skill level was far, far, FAR above the 5 wpm amateur radio
code test.

>>> In US amateur radio, Novice Class examinations have always

Not misdirection at all. Just proof that your line of 'reasoning' is flawed.
FCC closed off the Technician Plus class from new licensees even though it was
growing steadily.
>
> If you must misdirect, try the pre-restructuring no-code Technician
> Class.

Why?

> That will show you quite a different picture.

Not at all. The Technician class was also growing. Still is, in part due to the
renewal of all Technician Plus licenses as Technician.

>>> The decrease in license numbers was so much and for so
>>> long that it was obvious to all who bothered to examine that
>>> Class. The FCC dropped the Novice Class from any new
>>> license grants following the recent restructuring.

>>Technician Class licenses after February 1991 would have done so if that
>>license had not lost its code test. That is clearly incorrect.
>
> Supposition fantasy.

Only by you.

> You cannot possibly know the motivations
> of two hundred thousand no-code Technican Class licensees.

Neither can you, Len. Yet you ASSUME none of them would have gotten amateur
radio licenses if a code test were involved.
>
>>It stands to reason that if code testing were an 'unnecessary, arbitrary,
>>and
>>distasteful (to many) barriers to entry', those who were interested, but
>>dissuaded by those unnecessary barriers would "jump in." when the 'barriers'

>>hams or percentage growth. Growth in total hams was almost exactly the same
>>during the '90s, compared to the '80s, and the percentage growth actually
>>dropped.
>
> No, you are too far into supposition fantasy.

How? Was there no growth in the number of US hams from 1980 to 1990?

How do you explain the FACT that US amatuer radio grew as much in the '80s
(when all licenses required a code test and there were no code test waivers) as
it did in the '90s (with waivers and a class of license without a code test)?

> Two hundred thousand licensees wrong.

Not me. See above question. Explain.
>
> That PCTA argument has become a trite, worn-out cliche' of no
> logical value.

Then explain the FACT that US amatuer radio grew as much in the '80s (when all
licenses required a code test and there were no code test waivers) as it did in
the '90s (with waivers and a class of license without a code test).
>
> That old horse has been beaten to death so many times over that

Then explain the FACT that US amatuer radio grew as much in the '80s (when all
licenses required a code test and there were no code test waivers) as it did in
the '90s (with waivers and a class of license without a code test).
>
> The ACTUAL growth has been discussed over and over again in here

> prior to the restructuring data. You've been shown the numbers.
> You want to discount the evidence, turn a blind eye to it, all to
> support your obstinate need for winning an argument at any cost.

Not at all. You are the one who cannot admit a mistake. You keep insisting that if there were no license class without a code test, US amateur license totals would have decreased. Yet the decade of the '80s proves you wrong.
>
>>Since the closing of the Technician Plus to new licenses in April 2000, FCC
>>has

I just read Part 97.
>
> Why do you accept some statements as truth and others as false?

The credibility of the source.

> The answer seems clear. A double standard.

Nope. It's the credibility of the source that matters. You don't have much.

> Statements from
> pro-code supporters are "truth" while statements from no-code
> advocates are "false."

Incorrect. See any discussion I have had with K2UNK, W5NET, KC8PMX or a number of others for the past 5+ years.

The fact is that YOUR statements are suspect due to your long history of unadmitted mistakes and faulty reasoning.

I notice quite a lot, Brian. I notice, for example, that you sidestep
the fact that you frequently do that of which you accuse Dick of doing.
When you repost the one liner routine, would you mind digging up your
old double standard line and tossing it in for grins.

It IS fascinating to see these generalities. The bitterness is
something else again. Bitterness is one of those things that can become
addictive to some people.

But as for generalities, of the people who do the charity event PS for
our club, there are only one or two who are not highly technically

inclined. They are just regular tech types. And there are no grandmas to be seen - though we'd welcome them. I'm highly technically inclined, and I do every event. So I don't know where he gets his data.

>In reality, the Hams that volunteer for these events are being taken
>advantage
>of.

Seducing your fourteen year old neice, that can't know better, is "taking advantage" of someone, Vippy.

Offering to DO public service, expecially for an organization as worthy as March-of-Dimes is NOT "being taken advantage of." I know...I had to depend on funds from them and Shriners and a couple other organizations for several years....

>>She can be replaced by any other grandmother and
>>a GMRS/FRS/MURS handie-talkie.
>
>True. Anyone can do these volunteer events. They could easily train someone,
>licensed or not, the same day to do it.

Uh huh...There's not a GMRS repeater within 75 miles of Chattanooga, and the terrain will not support MURS/FRS communications over a few hundred yards.

Try again. Try smarter.

>Also agree that Hams do these events to make Hams look like they are doing
>"public service".

If they ARE doing the event, Your Screwiness, they ARE doing public service!

>>of the whole of the amateur radio service.
>
>Wrong. It does not act as justification to eliminate code testing. It has
>NOTHING to do with code testing.

OH?

Several folks in this VERY FORUM used the excuse that if code testing were dropped, there would be more Amateurs to draw from to do public service functions.

>Its used by anyone, code or no-code, to make the hobby and themselves look
>like
>they do volunteer events.

If someone is doing a communications event without compensation, and they VOLUNTEERED to do it, they ARE "doing" a VOLUNTEER EVENT.

I used to think you were just a kid with little Amateur Radio experience and poor English comprehension. (Or at least the American version of it...)

But I am now convinced this is an INTENTIONAL effort to look stupid, and your only reason to be here is to incite and antagonize.

Imagine that...Yet another alleged "engineering professional" with an acidic mouth and few facts trolling in this NG.

Sheeeesh.

>And, Hams are often
>antisocial (but in a good way, I guess).

Yeah...anti-social...That's why they organize all these hamfests...so they can go out in public and NOT socialize with people. I guess Dayton Hamvention is just tens-of-thousands of guys standing around, eating and ignoring each other...?!?!?

>You can apply this argument to anything. By this logic, nothing is known.

In your case, Vippy, this would be correct..."nothing is known".

>Also, I know it was random because they invited Hams to attend. I happened to
>be on the mailing list. It is random from my perspective who actually
>attended
>this event.

If Amateurs were the only ones invited, it was not "random".

>There were a few new people, like me, that did not attend before.

Probably so...but how do YOU know? Did you go up to them and ask? Or did you go and NOT socialize?

>It was a general activity Ham gathering. (I did PSK31, SSB, ATV, some
>satellite, some HF phone).

WHOOOOOOOA VIPPY!

You yourself have stated, in this VERY forum, that Hamfests were controlled by "only coders" who had NO interest in doing anything BUT Morse Code related activities. With the possible exception of the satellites which DO have some Morse Code traffic on them, where is the evidence of "only coders" in YOUR example???

>The selection process was completely random here. I chose to attend because
>they had many radio modes I could operate.

But you stated Hamfests were "only coder" events? Were you mistaken before, and now recanting your earlier assertion, or were you lying before ? ? ?

>Hamfests are a large group. Also, surveys have been done. Its also common
>sense

>observation.

You keep refering to "surveys", Vippy, but you have yet to make a SINGLE referecen to some valid study taht was done by ANYONE.

So, WHERE are these "surveys" and WHO did them?

>>This was all consumed in one day.
>>By whom?
>
>It was not hard to miss that EACH one of them ate a huge quantity of high fat
>foods. In fact, they ate more than I saw them eat. I know they ate the shrimp
>when I was out on my trip.

There's your problem, Vippy...You spend entirely too much time at the concession stand and too LITTLE time in the hamfest events! If you hang around food, you're going to see people eating it!

>>20 people can eat a lot of food over the course of a day.
>
>This proves it.

Proves WHAT? That over the course of a day people eat...?!?!

There's a revelation! Glad we cleared THAT up ! ! ! !

>Yes, the free food is one good part of some Ham events.

WHAT "free food"...?!?! The only "free food" I ever saw was at LOCAL club meetings, NOT "hamfests", and then only becasue everyone brought their own covered plate.

>I try to make use of events that have food served. You can do the
>same - its fun!

How can THAT be? You spend sooooooooooo much time belittling people who eat, Vippy!

>Contesting requires you to sit in one place for a period of time.

So does riding in the Space Shuttle.

>They just went unbelievably overboard.

Kinda like some of your assertions in this forum, Vippy?

It is a generalization, but not based on bitterness or emotion.

There are plenty of people who are not social butterflies. If the shy one is technically inclined, the ARS can be the ticket out of his/her shell. What a great thing!

On average, Hams are probably somewhat less active than other groups due to the fact that there are quite a few elderly hams (no problem, the ARS is a great hobby for older people)

As for the young and middle aged hams, there might be a few more of us active ones than first appear. You bicycle, Jim is a runner, and I play Ice Hockey. Those are just the ones I know about

This came up in a college LE course I took a few years ago. The prof disliked manditory sentancing because it forced release of more dangerous criminals and had many ancidotal examples. I do not have my notes from class and doubt I could find them now.

There have been many major news stories about violent criminals released (often under court order) to correct overcrowding who commited serious violent crimes including rape/murder. At the same time other news articles attributed the overcrowding to manditory drug sentances. Faced with a court order that requires release of, say, 10 prisoners, prison authorities perforce release criminals doing indeterminate sentances rather than those doing manditory sentances regardless of their crimes.

This isn't anything I'm interested in, nor pertinent to this NG, so no specific facts such as names of criminals or victims, what prison they were relaesed from, etc come immediately to mind. However, searches of the following sites will no doubt yield the information you seek.

Now that has me thinking. Some years ago, before I was a Ham, our club did one of those "tough guy" competitions in Penns Creek, east of where I live. This was in a mountainous area, with a meandering creek cutting through it. There were no GMRS repeaters or anything else nearby. In fact, it was darn near wilderness.

The fellow who ran the ham end of the event put up a battery powered repeater on top of one of the mountains to cover the event. This involved some heavy duty 4-wheeling and map studying, and knowledge, as well as determination.

Lets see someone be trained in one day to do that!

>license).

"SEEMS"...?!?!

>It could be that the narrow interests of contesting and antennas. Cult-like
>conventions, codewords, "contest" rules (which must be followed exactly), and
>Morse code pressure.

Nothing must be followed "exactly" except as directed by the Federal
Communications Commission.

>There ARE other things that can be done with amateur radio. The current group
>of Hams only seem to want to do things a certain way, and only bring new Hams
>that want to do things the same way.

That's Lennie talking.

NONE od Amateur Radio is still done "The Way I Did It" for any except the
newest of Amateurs in this forum, Vippy.

>As a result, some other people may not want to join amateur radio. I would
>not
>recommend any EE join the hobby, even if they were interested in rf. Only, if
>they were interested in antennas, would I recommend it.

That's becasue you are narrow minded and selfish. You didn't get what YOU
want of it, so you're going to try and ruin it for everyone else, tehreby
imposing YOUR "opinion" on anyone you can. It's your own form of extracted
revenge.

>Changing the hobby for the better is a hopeless idea.

That's only because you are hopelessly narrowminded. And you are
disappointed that there are not a bevy of "preety fems" to be had here.

>I can tell you that. You
>will be alot happier not trying to change the hobby.

Then you wasted your time. I have had a LOT of fun, both doing "old"
things AND "new" things.

Mister/Ms Spectrum, whomever you are, know before whom you stand...

But then again, you DO know who I am. Sorry, buddy, your are
not succeeding in pulling my chain...but for the sake of those
few here who would tend to give any credence to your misstatements,
I will deal with them.

>CB calls were issued by the
>FCC Division office and were in format nWxnnnn where
>the first "n" was the FCC division number and the "Wxnnnn"
>was the spec op random number for each division.

What "Division" office? What "spec op random number"?

At the FCC, all "Divisions" were and still are the next
organizational level below the Bureau at FCC HQ in Washington.
The field offices across the country which dealt with the
public were always called District offices, and reported to a
HQ entity called the Field Offices Division, later called the
Enforcement Division, and now report to a Regional Office. All
these were under the Field Engineering and Monitoring Bureau,
later called the Field Engineering Bureau, then the Field
Operations Bureau, then the Compliance and Information Bureau,
and now are part of the Enforcement Bureau structure. Look it
up on the FCC web site.

And that's only the history going back to the early 1950s.

A careful reading of my quoted posting will show the correct
format for the field-issued licenses (1959-1963 IIRC). The
"nnnn" numbers were NOT random - there was a ledger at each
office in which they were recorded sequentially.

>> "Later On" when the Gettysburg License Center was opened, CB
>> licenses were issued from there and call signs were 3+4 format
>> such as KBA1234. KAA calls were reserved for GMRS. When they ran

>> what my ex-wife's CB call was.....
>
>
> BZZZZZZZT! wrong again. Soon after the CB call was
>issued they reverted to a spec category of random intended call
>signs per an agreement with the ITU.

Your statement makes no sense. What "random intended call
signs"? The CB call signs issued by Gettysburg in the 3x4 or
4x4 formats were always computer-issued sequentially, not random.

Get your act together before you speak or post further on this
subject, my friend.

>Sorry, Mr. Turnip, I'm licensed and been licensed longer than you
> have. One of those licenses isn't in AMATEUR radio.

You're right. You are NOT licensed in Amatuer Radio. At present (07 May 03) you do not possess an FCC Station license, ergo you may NOT legally radiate any RF except under Part 15 and 95.

For the purposes of this forum, you are UNLICENSED.

>Sometimes I wonder why the FCC puts up with amateurs.

You're right...you are as amteurish as they come and it's high time to get rid of you.

So...pack your bags and get lost, Your Putziness, and do us ALL a favor.

>Hey Dee.....you can't argue with a turnip. Neither 'Vshah101', or 'Len over
>21' are licensed.

One correction, Dan...To his credit, "VShah101" is KB1HMW.

He DID, however, try to conceal this fact for weeks until I did a bit of detective work of my own and "outted" him. He tried to avoid it at first, but then owned up to it.

Despite repeatedly stating he "supports" Amateur Radio, he's made numerous denigrating rants in "rec.radio.cb", and, to the best of my knowledge, has never even signed a post here with his callsign.

Also, he makes all these grandiose assertions about Amateur Radio (cult, etc), and how "anti-social" Amateur Radio supposedly is, yet he's never once "enlightened" us with his on-the-air activities.

>I guess the real issue is why bother with someone that
>ain't been there and done that.

He's at least been to a VE session, however I get the feeling that that was his LAST Amateur Radio related function he was really at. He makes some vague claims to participating in some "club meetings", but then also makes wierd assertions as to what allegedly ahppens at these meetings...Yet NO ONE has ANY idea as to what "clubs" they are supposed to be, because even people who live in his neighborhood don't know what the heck he's talking about.

>There minds are already made up. All they are doing is keeping the
>arguements going. Apparantly neither have a life.

Lennie is an argumentitive, socially diminutive putz. Vipul is too young and too inexperienced to know the difference.

> Yankee"

As long as that operation occurs within airspace under the jurisdiction of
the United States government. Otherwise the entire CALLSIGN must be used
except where international agreements recognize an airline identifier and
flightnumber (ie: Speedbird 1369).

>I got this from the FCC Call Sign Desk in the 1980s when

Misdirection. Irrelevant.

You asked for information about error rates and I provided some, and a link to
the post. Now you're all upset about something.
>
> All you want to do is ARGUE.

I prefer the terms "debate" or "discuss".

The point I am making is very simple, but you keep avoiding it: The level of
Morse skill required for an amateur license is far, far, FAR below that
required of military radio operators. Which is why the military used aptitude
tests. One does not have to have served in the military to know the truth of

that statement.

You cannot refute it, so you attack the messenger - me.

> You are wasting everyone's time.

How? You don't have to read my posts. You don't have to respond, either. But you do, and your responses are lengthy and very hostile. For example, I don't make fun of your name - why do you make fun of mine? Why do you address me as "boy", even after it was pointed out to you that the term is a racial slur in some situations?

> You've already been told, given the resources, and
> still you want to argue, argue, argue for no other reason than
> to satisfy your childish tantrums.

What tantrums? I'm not the one calling people names because they disagree with me.
>

So what? You asked for the information, and I provided it.
>
> TRY, oh really TRY to stay current with the existing flow.
>
> You are totally wasting everyone's time quoting message
> exchanges from over 5 years ago.

How? You don't have to read my posts. You don't have to respond, either. But
you do, and your responses are lengthy and very hostile.

The posting I quoted gives the info you requested. From someone who was there,
met the qualifications, did the job. The fact that the posting is five years
old does not make it any less true.

> Those exchanges are OVER,
> done with, cannot be resurrected from the dead past in hopes
> that you will win some of those you lost.

I don't recall "losing" anything. The fact is that at least the Navy's code
skill requirements (back when the Navy actually used Morse code) were much
higher than any amateur radio test.
>
> The US Navy NO LONGER USES any on-off manual telegraphy

You don't seem to have much respect for the Coast Guard. I recall a posting of yours where you made fun of the accomplishments of a Coast Guard radio operator in Hawaii. Perhaps I will repost some of your choice words about his military service.

>>24 wpm of 5 letter code groups is 120 letters per minute. 7200 letters
>>per hour, with just 3 errors permitted. That's ONE error per 2400
>>letters - an error rate of .0417% - over a one-hour period.
>
> BFD. ANY error may be fatal in a five-letter-group encrypted
> message. I don't think you grasp that concept at all.

Sure I do.

Can you point to an incident where an error in a five-letter-group encrypted message was fatal?
>
> In amateur hobby/recreation communications one can handle
> errors and garble in cleartext quite easily. Such an error has
> no tactical or strategic importance compared to sensitive
> military communications.

The point is still the same: The level of Morse skill required for an amateur license is far, far, FAR below that required of military radio operators. Which is why the military used aptitude tests. One does not have to have served in the military to know the truth of that statement.
>
> One of the reasons the US Navy began using teleprinters for
> encrypted communications in 1939 was the ERROR rate in
> manual morse code telegraphy.

How do you know that?

K0HB, who was in the navy as a radioman, says the reason the Navy stopped using Morse on the radio was speed, not errors. I recall him saying that a modern war could not be fought effectively at 25 wpm. He was there, met the qualifications, did the job.

> Not only that, teleprinters
> could "stand watch" (a nautical term in the military) 24/7 on
> an important frequency. Teleprinters need only their paper
> rolls and tape replenished...they don't need sleep, food, or any
> necessary human being needs away from the comm gear.

Only on the receiving end.

So what's your point? That hams should use teleprinters?
>
> But...but...this message thread is all about the NOVICE CLASS
> amateur radio license, isn't it?

Nope.

> Amateur radio is NOT military or
> even close to military communications.

So why did you mention military aptitude tests for Morse skill in the first place?

> The Novice Class
> license is no longer being granted.

Incorrect. No new Novice licenses are being granted. Existing ones continue in effect.

> It will disappear when the
> last novice class renewal time is up.

WRONG.

Novice class licenses can be renewed. Only the Technician Plus license will disappear through renewals.

> Gone.
>
> So, why are you in such a big dither about MILITARY radio,
> Jimmie?

I'm not. Just pointing out some facts. Like the fact that the level of Morse skill required for an amateur license is far, far, FAR below that required of military radio operators. Which is why the military used aptitude tests. One does not have to have served in the military to know the truth of that statement.

> You've never served, haven't indicated you've ever seen
> any military radio communications in progress, don't seem to
> know squat about military comm.

Yet I do know some things about it.

Why are you in such a big dither about AMATEUR radio, Len? You've never had an amateur license, never even tried to get a license, never set up your own amateur station, and don't seem to know squat about the actual use of Morse code in amateur radio.
>
> You are in such a state of concern for only one reason: To try
> to "get back" at someone who has challenged your radio
> expertise in the past and continues to do so. You carry on in

That sounds like you, Len. Not me.
>
> You don't seem to care about the future, newcomers in ham
> radio not yet licensed, or anything but those who Believe as You
> do.

How do you figure that?

> You just can't shake that Belief in morse code as needed
> in amateur radio.

It's just an opinion. Why are you so upset about it? You can't seem to handle
strong opposition to your views.
>
>>No, correct. Morse skills alone would not get someone a Radioman
>>rating. Other knowledge and skills were needed.
>
> Yes, first one had to join the US Navy and go through Boot Camp.
>
> Beyond that what do YOU know?

Quite a bit, actually. Doesn't make me an expert.
>
> You don't know. You've never served in any US military branch,
> wartime or peacetime. You've never taken that Oath.

So? Does that make the facts I posted incorrect?

Does that mean Mr. LaFon was wrong?

Does my lack of military experience somehow prove that there should not be a
code test or a Novice class license?

>>The reason for military aptitude tests for code skill potential was
>>NOT because basic code skills are unusual. It was because their
>>requirements went far beyond basic code skills.
>
> Ah, yes, the authoritative voice of the military again...not just from
> someone who never served, but someone who never instituted
> any battery of military recruit aptitude skills, someone who never
> had to argue that for any military review board.

Did you ever institute a battery of military recruit aptitude skills, Len?

Did you ever argue them for a military review board?
>
> You've gotten terribly confused with what you are trying to argue.
>
> The message thread Subject header says "Novice Class license."
>
> "Novice class license" only exist in AMATEUR RADIO. Amateur
> radio is NOT military, never was.

Then why did you bring up the subject of military aptitude tests, Len?

This whole military rant of yours is something you started, not me.

> Amateur radio is a hobby, a
> recreational pursuit.
>
> You've lost everything on arguments either for or against saving

> any Novice Class license.

I haven't lost a thing, Len. You seem to lose your temper a lot, though.
>
> You are all hung up and petty about some military requirement

> What "Division" office? What "spec op random number"?

The middle division office. But you already knew
that and are deliberately not commenting on the
"spec op random numbr."

>

That was prior to the chapter 15d reorganization. I thought
you claimed to know all about it, now you act like it is news
to you. As you say, go look it up on the FCC web site.

>
> And that's only the history going back to the early 1950s.

> office in which they were recorded sequentially.

They were random intermittentlly for several years until my
good friend Hap Halifung came in and reorganized that
division. Come on, you know all this already! "nnnn" numbers
did not fite the 95.308c1e format.

>

523. Spread Spectrum Ops

Newsgroup: rec.radio.amateur.policy
Date: 2003-05-07 19:01:23 UTC
From: Spectrum <Rush@sisolixter.org>
Message-ID: <b9bl65$83n$0@pita.alt.net>
Source record: 66673

Does anybody know of any nets meeting on a
regular basis to discuss Spread Spectrum?

I'm completing a reaserch paper on Spread
Spectrum. Several of my students have been
bugging me to check into technical discussion
nets. Also nets that discuss quantum theory.

73 de Spectrum

>>Did you ever have a "Radioman" rating, Len?
>
> Jimmie, open your morse-besotted mind to some facts instead
> of wandering around like a spoiled child, waving your clenched
> fists in anger at not being respected in a world of adults.

Yet again...

Jim Miccolis addresses Lennie by his given name, and Lennie tries to dig
in with diminutives again.

Just one more example why N2EY gets more respect in any 10 seconds of his
life than Lennie ever hoped for in his 70+ years...

Maybe that's why Lennie has to lie and denigrate others so aggressively?
He's still angry that he's not looked up to so fondly?

>You've made so many errors, misdirections, accusations in
> this post that you MUST be corrected in public. Tsk, tsk, tsk.

Jim's not had "...so many errors" in this forum, Your Putziness. Nor has
he been caught lying or misrepresenting himself in any way, shape or form.

YOU, on the otherhand...Well...follow along and see....

>First of all the armed forces of the United States doesn't have
> "ratings." It has MILITARY OCCUPATION SPECIALTIES,
> commonly called "MOSs.

Stupid. Really stupid.

The Army and the Marine Corps have MOS's. The Navy has NEC's (also
parroted by the USCG), and the Air Force acronym escapes me at the moment.

The Navy refers to it's enlisted specialties as "Ratings". This is public
knowledge and official USN policy.

>The US Army never had any MOS of "radioman." That is a
> US Navy MOS nomenclature.

The Navy does not have MOS's. And as of several years ago, it no longer
has the radioman rating, either.

>You've never been in any US military branch so you wouldn't
> know.

You allegedly WERE in teh Armed Forces at one time, and you are
demonstrating a significant degree of ignorance right now, Lennie. So what's
your point about his lack of military service?

>You apparently never went to the US Army website I
> posted in this newsgroup TWICE to find out...or to try any
> link on that site to find out other US military branch MOSs
> and job descriptions.

The only othr branch of service that refers to "job descriptions" as MOS's
is the United States Marine Corps.

> All you want to do is ARGUE.

In as much as he's presenting facts and you are not, I'd say you are the
one who's arguing. Foolishly at that.

Hmmmmm.....YOU are making false assertions and relating non-factual
information...Who's wasting who's time, Lennie?

>You've already been told, given the resources, and
> still you want to argue, argue, argue for no other reason than
> to satisfy your childish tantrums.

Jim's not raised tantrum one. On the OTHERHAND we have you...

>USN "Radiomen" operated radios ...(SNIP)

What's the point?

>There are NO ships ON land...(SNIP)...Can you grasp THAT concept?

Why the tantrum, Lennie?

You STILL have not answered Jim's question.

>Both today and a half century ago, US Army soldiers are LAND
> warfighters FIRST, the military occupation specialty being
> secondary to that primary task.

You STILL have not answered Jim's question.

>All US Army soldiers receive basic infantryman training...(SNIP)

Not germane. You STILL ahev not answered Jim's question

>Jimmie's problem since he never served in any
> branch of the US military]

Nor has he ever been obligated to do so by law.

You STILL have not answered Jim's question.

None of these items were ever contested nor even broached. THIS was an attempt by you, Your Putziness, to avoid the question put to you.

Kinda like a tantrum...You're trying to distract mommy's attention from the fact taht you got caught with your hands in the cookie jar...

>>The following is a direct quote from Curtis LaFon, N5HDQ. Mr. LaFon is
>>a retired US Navy Radioman. He posted it here back on January 9, 1998.
>
> Belay that, swabbie-wannabe.

Hmmmm....Lennie trying to avoid facing the "Virtual Firing Squad" of facts vs his fiction.

>This is the year 2003. It is NOT five years and three months ago.

The we can rest assured that we've heard the last of your Army career and anything having to do with your alleged "professional" career since all of it predates the "five years and three months" threshold...?!?!

>TRY, oh really TRY to stay current with the existing flow.

Try yourself.

>You are totally wasting everyone's time quoting message
> exchanges from over 5 years ago. Those exchanges are OVER,
> done with, cannot be resurrected from the dead past in hopes
> that you will win some of those you lost.

The comments he cited were from a person with first-person knowledge of facts that contradcit your rants, Lennie. Sorry you got your nose rubbed in it..

>The US Navy NO LONGER USES any on-off manual telegraphy
> for radio communications. It hasn't done so for many years.

And you know this how?

>The US Army NO LONGER USES any on-off manual telegraphy
> for radio communications. It hasn't done so for many years.

And you know this how?

>The US Air Force NO LONGER USES any on-off manual
> telegraphy for radio communications. It quit doing that ahead of
> all the other US military branches.

And you know this how?

>>24 wpm of 5 letter code groups is 120 letters per minute. 7200 letters
>>per hour, with just 3 errors permitted. That's ONE error per 2400
>>letters - an error rate of .0417% - over a one-hour period.
>
> BFD. ANY error may be fatal in a five-letter-group encrypted
> message. I don't think you grasp that concept at all.

"BFD"...?!?!

BBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHHAAHAHAHAHA ! ! ! !

Yes, there's a lack of concept grasping here, but the problem is NOT Jim Micollis' ! ! !

>One of the reasons the US Navy began using teleprinters for
> encrypted communications in 1939...(SNIP)

WHOA YOUR SCUMBAGGINESS ! ! !

1939 is waaaaaaaaay off your 5Y3M threshold!

>But...but...this message thread is all about the NOVICE CLASS
> amateur radio license, isn't it? Amateur radio is NOT military or
> even close to military communications. The Novice Class
> license is no longer being granted. It will disappear when the
> last novice class renewal time is up. Gone.

Assuming that the "last Novice" keeps renewing his/her ticket and is of relatively young years, that may be a very long time.

Certainly more time that YOU have, Lennie!

>So, why are you in such a big dither about MILITARY radio,
> Jimmie?

BBBWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! !

I love it when His Scumminess goes into his Pot/Kettle/Black mode.

>You've never served, haven't indicated you've ever seen
> any military radio communications in progress, don't seem to
> know squat about military comm.

>You are in such a state of concern for only one reason: To try
> to "get back" at someone who has challenged your radio
> expertise in the past and continues to do so.

Who's challenging him?

YOU certainly haven't. There's nothing challenging about anything you've said here, Lennie, except to try and keep from laughing at your arrogance and your IGNORANCE!

>You carry on in
> childish rants about "accuracy" when all you want to do is make
> message points and personal triumphs in the newsgroup.

This post alone has shown that Jim is right. You cannot keep simple things right. Why should we expect ANYTHING you do to be correct?

>Yes, first one had to join the US Navy and go through Boot Camp.
>

> Beyond that what do YOU know?

So far, more than you, obviously.

>You don't know. You've never served in any US military branch,
> wartime or peacetime. You've never taken that Oath. You've
> never put your life on the line anytime, anywhere for your
> country.

You took the oath and put on the uniform, Lennie...but keeping from
stumbling into a ben-jo ditch while weaving a drunken path back to the barracks
in a rear area is NOT "putting your life on the line" for ANYthing, Lennie.

>Your only connection to military radio is OLD data, surplus radio
> equipment, electronics from the PAST.

Like ADA in 1953, Your Laziness?

>You've gotten terribly confused with what you are trying to argue.

Pot/kettle/black.

>"Novice class license" only exist in AMATEUR RADIO. Amateur
> radio is NOT military, never was. Amateur radio is a hobby, a
> recreational pursuit.

Amateur Radio MAY be a hobby...pursued for recreational purposes. It has
other applications.

>You've lost it.
>
> Quit wasting everyone's time with your petty desires.

As opposed to YOUR petty desires, Lennie?

Sheeeeeeesh. What an IDIOT!

True insofar as it goes, but I meant it's not recognised as a separate
service. Unlike, say ... amateur radio, for example.

> Yankee".

That's not how the FAA does it in air traffic control, Phil.

For over 30 years the FAA ATC folks have used the FAA "tail
number" (FAA registry) on the radio. Their "proper radio ID" in
this case would be November Two Echo Yankee. They may
or may not preface that ID with the aircraft type.

In repeated back-and-forth on the radio the FAA ATC may use
only the latter part of the FAA registry, the numbers and any
suffix to that tail number. In that example it would be just
Echo Yankee or Two Echo Yankee.

Any scanner user can vouch for that. No pilot's license required
to "know it." Radios tuned to BUR and VNY in this neck of the
woods can confirm it any day of the week. Listening to LAX,
especially approach and departure control frequencies, reveals
that commercial air carriers don't even use the tail numbers in
radio ID, just their corporate identification and flight number.

Military aircraft flying civil airways under FAA air traffic control
will use their military flight designations, not the military aircraft's
tail number.

A visit to any TRACON will confirm all of that if no scanner handy.

>>Maybe I can find it and get my picture taken next to it!
>>
>> Ya want one if I find it, Jim?

writes:

>> Sometimes I wonder why the FCC puts up with amateurs.
>
>They probably weren't aware that they should consult with you.

They are very much aware, little Davie. It is required by LAW.
The FCC listens to ALL United States citizens.

They aren't required to listen to extraterrestrials living in another
galaxy.

>> FCC doesn't require any commissioner or staff to have
>> amateur licenses in order to REGULATE amateur radio. :-)
>
>That's right. They're paid to regulate. It is part of the job.

REQUIRED BY LAW...but law does not yet require "gladness."

ONLY for US civil radio.

>If you can have a nice life in your mind, we can have nice lives in our
>minds.

My wife and I have very nice lives. My only problem seems to be
the stubborn, vain, self-righteous, self-appointed-code-police who
demand that all in a hobby/recreational radio activity test for
morse code. Those "SVSS" types insist that all amateurs must
do as they did long ago.

>> I wish you all well.
>
>You don't sound very sincere.

I am far more sincere in that than little Davie.

>Why in the world do you think you can force anyone to share your beliefs
>about morse testing or a minimum age for participation in amateur radio?

I don't expect to change the opinions of das Oberst (little Davie),
Reverend Jimmie, Steamy Stalker, the bear-hunting Katapult
King Kellie, big DICK, or the lost bus driver. They consider
themselves arrogant and smug in their stubborn, vain, self-righteous,
self-appointed-code-police ("SVSS") attitudes. They demand all
others do as they did long ago.

OTHER readers are considered optimistically to be capable of
rational thought and actually capable of deciding for themselves
on the proper course of action in changing laws. Perhaps that is
TOO optimistic considering that the opposition has been spoon-
fed the Proper Way to Think from the Church of St. Hiram in
Newington.

>> What's wrong with "live and let live?"
>
>Go live.

I do. Why don't you?

>Amateur radio has changed quite a bit since I first became a ham forty
>years back.

Oh, my, another "CV!"

I've been a professional in radio since FIFTY years ago.

Never had to use morse code in all those FIFTY years. No need.

>The singular skill to which you refer is used daily by
>thousands on the amateur bands.

Whoopie. Many more thousands ride horses just in Los Angeles
County every day...not for transportation, but for pleasure.

The state of California does NOT require horsemanship skills to
operate any motor vehicle. There are about 35.6 million residents
in the state of California and Californians have the most vehicles
in any state of the union.

There is NO need to test for morsemanship for an amateur radio
license just to satisfy the selfish desires of ALREADY licensed
amateurs.

US radio amateurs have no law enforcement powers from their
amateur radio license grants, yet they demand CONTROL over
who shall get into amateur radio and HOW they do so. That's
a perverse "control-freak" condition.

>I don't live in a fantasy land and I understand progress.

Little Davie lives in another galaxy according to another post in a
different thread.

>How's your progess on getting up to five wpm?

Zero. Passing some irrelevant test is not necessary to discuss
the need to maintain that irrelevant test in law.

The specious control-freak's idea that one must "pass a test first
in order to talk about it" is like requiring all to commit a felony
crime in order to talk about laws for same.

>You mean there are those here who disagree with you and that honks you
>off.

The "SVSS" honk me off. They are control-freaks. They are
perverse in thinking.

They have NO authority yet they assume such.

The "SVSS" are the Saddam Husseins and Osama bil Ladens of
a hobby, a recreational pursuit...demanding to control and judge
a non-professional activity.

>> But some of us are optimistically trying to free mighty morse-
>> men from their own morse-besotted Beliefs. Maybe it is too
>> ideal an optimism. We keep on trying while the mighty morse-
>> men are just trying everyone else's patience. :-)
>
>Izzat in your role as self-appointed "advocate" for something or other?

That's in all rational, thinking observers' perception more or less.

If that upsets you, go honk your own horn. You certainly do that
often enough in here.

>I'm almost certain that you are incorrect on this one, Leonard. The
>Navy uses "ratings". The Air Force used the term "AFSC". The term
>"MILITARY OCCUPATION SPECIALTIES" was not used in the Air Force.

Okay, we've established that little Davie didn't have an MOS
while in Vietnam bravely serving his country.

Box moving doesn't require going through military schools.

>Uh, isn't that what you're all about?

No. I'm trying to stay focussed on this thread's Subject, not
the brave, valorous military service life of little Davie Heil.

The Subject line title is "Re: The need to save the Novice
Class license." It's right up there on the message header.

>> You don't seem to care about the future, newcomers in ham
>> radio not yet licensed, or anything but those who Believe as You
>> do. You just can't shake that Belief in morse code as needed
>> in amateur radio.
>
>Where has that been indicated in this post or any other by Jim?

Only in about five-plus years of posting by the mighty morsemen.

It's all in Google. If you need a refresher, go there and look for
a month or so.

>Ever hear of the Navy "A" and "B" schools?

No. I served 8 years in the United States ARMY.

Do Navy "A" and "B" schools teach anything about amateur
Novice Class licenses?

>You look just like George Patton up on that soapbox, all wrapped in
>patriotic bunting, "Lennie".

Was George a Novice Class radio amateur?

Did he ever join ARRL?

Could he do morse code?

Tell us about your Novice Class amateur radio experiences in
Vietnam, mighty morse warrior. Did you "hone your skills" there?

Gosh, Phil, you one of those Medical Doctors TOO?

Last public health expo I was at, I got 98.2 degrees. :-)

A few thousand TV and radio news broadcasts plus as many
newspapers and newsstand periodicals have all talked about
the obesity problem in the USA lately. None of us need any
"degrees" in listening/viewing news, do we?

Rec.radio.amateur.policy? Oh ... I don't know of any such nets; one would suspect that your needs would be better met with groups on the internet. There are a number of Yahoo groups discussing quantum theory; Yahoo seems real spotty on spread spectrum, although there are a couple of groups. I'm sure there are newsgroups and/or other internet groups. About the closest I've come with amateur radio was running across a University of Rochester professor on 440 FM at 3:00 AM last summer. He teaches theoretical physics. That was, of course, one on one. Mostly idle chit chat. Perhaps others have a better answer to your query; I suspect, however, that the internet is the way to go.

For a look at the British version of the "Novice", see:

http://www.arrl.org/news/stories/2003/05/07/3/?nc=1

for a story of the first ~16 months of the "Foundation" licence.

Interesting points:

- UK has 50,000 hams and 650 amateur radio clubs

- Foundation licence has produced about 4000 new amateurs since its inception on Jan 1, 2002

- 25% of the newcomers are under 21 years of age

- Foundation licence gives limited privileges on every UK amateur band from 136 kHz to 440 MHz EXCEPT 10 meters (!)

- Foundation power limit is 10 watts

- Foundation hams CANNOT homebrew. Only approved manufactured gear and approved kits may be used. Some of the approved kits are quite complex.

- Foundation tests are a 20 (soon to be 25) question written and a Morse code "assessment" test. The Morse test requires both sending and receiving but allows all sorts of adaptations such as speeds below 5 wpm and Morse-translation charts (write down dits and dahs, then look 'em up on the chart).

- RSGB supports total elimination of code testing as soon as the treaty (ITU-R S25.5) allows. The "assessment" test was designed to push the envelope of the treaty interpretation.

- UK envisions transition three levels of licence. Instead of "incentive" licensing", they use the term "Progressive".

Does the USA need something like the Foundation licence?

I did not write the following, Vipul. You did:

>>> A significant percentage of Hams are fat, more so than the general
>>> population.
>>

I wrote this:

>>How do you know?
>
>It stood out when I was attending Hamfests.

Which simply means that the hams who attended the same hamfests you did had a higher-than-average obesity rate.

A lot of hams don't attend hamfests. I haven't been to one in almost 5 years because my Sundays are otherwise occupied. I'm 6' 3" and tip the scales at around 220. Do you consider that "fat"?

>By the way, the Hams I saw on ATV
>that day often (but not always) were overweight also.

Again, not a random sample.

>And, Hams are often antisocial (but in a good way, I guess).

The term you are looking for is "introverted".

>It was a general activity Ham gathering. (I did PSK31, SSB, ATV, some
>satellite, some HF phone).

So it was not ovberly devoted to Morse code, huh?
>
>>To get a random sample of hams, the selection process must
>>be truly random.
>
>The selection process was completely random here. I chose to attend because
>they had many radio modes I could operate.

Not a random sample at all. You chose for a reason. So did all the others who
attended. Therefore, it was not a random sample.
>
>>Looking at who shows up at club meetings or hamfests
>>is not a random selection process.
>
>Almost any Ham would attend a Hamfest. I don't know of any reason why more
>overweight people would chose to attend Hamfests.

I do. Here are some reasons:

- the food
- they are not out exercising or working
- they don't have to take care of children.
- they decided not to go to church that day
- it doesn't take much effort
>
>>> So, to find typical Hams, one can find a small group of Hams.
>>
>>Just the opposite. You need a large group.
>
>Hamfests are a large group. Also, surveys have been done.

What surveys?

>Its also common sense observation.

>joined the event for a few minutes. Yes, the free food is one good part of
>some
>Ham events. I try to make use of events that have food served. You can do the
>same - its fun!

FREE food??!!!

Right there you have a BIG selection process that destroys the randomness of
the sample. Folks who eat moderately and eat the right things aren't going to
be very attracted to an all-you-can-eat gathering that serves lots of high-fat,
high-sugar foods. On the other hands, folks who like to chow down on that sort
of stuff will be drawn to it.
>
>It was a fun experience at a very low cost. I got to operate many modes,

So does using a computer....

>The lack of
>activity does not help one's weight.
>
>If more people participated in radio direction finding, less would be
>overweight. Radio direction finding requires one to move around to find a
>signal. Also, its a more fun activity <to me> than contesting.

There are groups who do that. It's called "radio orienteering". Like many
sports, it is more popular outside the USA.

Be warned: The usual form of radio orienteering requires each contestant to
find his/her way to several hidden transmitters. (A staggered start is used.)
The various transmitters identify themselves using - Morse code!
>
>>It's not a radio problem, it's a problem of American culture.
>
>True, any event, like this, seems to bring such foods. For example, certain
>people that get together for sporting events often have these types of foods

Then it's your problem and your problem only, Lennie. You make it a habit
of hanging out in a newsgroup for a radio service that you are not a licensee
in and have expressed extreme hatred for.

>Those "SVSS" types insist that all amateurs must
> do as they did long ago.

Who? Who has "insisted" that you take the 1972 Novice Tst? (the one I
took)...I think Jim, N2EY said he was licensed in 68...I don't remember his
suggesting you find a copy of that test either. No Larry, nor anyone else.

Just takes TODAY'S test TODAY. Just like everyone else does.

>>>I wish you all well.
>>
>>You don't sound very sincere.
>
>I am far more sincere in that than little Davie.

Liar.

>I don't expect to change the opinions of das Oberst (little Davie),
> Reverend Jimmie, Steamy Stalker, the bear-hunting Katapult
> King Kellie, big DICK, or the lost bus driver.

You really like making up demeaning adjectives, don't ya, Lennie?

>They consider
> themselves arrogant and smug in their stubborn, vain, self-righteous,
> self-appointed-code-police ("SVSS") attitudes. They demand all
> others do as they did long ago.

Leonard H. Anderson once again utters yet another blatant non-truth.

>I've been a professional in radio since FIFTY years ago.

Uh-uh uhhhhhhhh! LENNIE!

YOUR RULES! We cannot discuss anything that occurred more than five years
and three months ago!

>Never had to use morse code in all those FIFTY years. No need.

No need...no skill...no ability...

>There is NO need to test for morsemanship for an amateur radio
> license just to satisfy the selfish desires of ALREADY licensed
> amateurs.

"Selfish desires"...?!?!

Here I thought it was because the FCC required Morse Code testing in order
for licensure with HF privileges.

The FCC has already stated (and Lennie himself has parroted...) that Morse
Code skill in not necessary, and that when international commitments that bind
it's hands have been ammended, they intend to do away with it.

Of course Lennie ignores this. It takes away from his mission to
denigrate, demean, lie about and otherwise make derrogatory comments about
Amateur Radio in general and some Amateurs in particular.

>US radio amateurs have no law enforcement powers from their
> amateur radio license grants, yet they demand CONTROL over
> who shall get into amateur radio and HOW they do so. That's
> a perverse "control-freak" condition.

This "control", other than the democratic process embodied in the FCC's
NPRM process, does not exist.

Leonard H. Anderson is again lying.

>>How's your progess on getting up to five wpm?
>
> Zero.

Well, that pretty well sums up just about ALL your Amateur Radio
experience, doesn't it, Lennie...?!?!

>>You mean there are those here who disagree with you and that honks you
>>off.
>
> The "SVSS" honk me off. They are control-freaks. They are
> perverse in thinking.

The only thing you are "honked off" about is that you've been unsucessful
in bullying anyonen into your way of thinking. It won't work hee, and it
certainly wouldn't ahve ever worked in person.

>>Izzat in your role as self-appointed "advocate" for something or other?
>
> That's in all rational, thinking observers' perception more or less.
>
> If that upsets you, go honk your own horn. You certainly do that
> often enough in here.

In other words, yes, Lennie's "honked off" about not getting his way.
He's a loser...a brat...a...a...a...

...PUTZ!

Well Keith you can use your cell phone for that or get on some chat room on the net ...why would you want to spend a lot of bucks on equipment and incur the ire of your neighbors with the antennas? Sort of a no brainer for me as there are a lot of buttons to push to talk in life outside of ham radio. Maybe the freebands .... nah ....guess not.

ertainly absurd and
> stupid. This stupid thinking by hams and the US government has hurt them
> over the years and the stance has alienated millions of potential
operators

Millions OH BOY millions have been alienated ......c'mon get realistic. Stupid thinking ..... well perhaps but if you look at it from the standpoint of knowing a elegant system of communication ....it isn't so stupid. Maybe the better question to ask is what does CW mean to me. I am NOT going to go into the usual pro CW crap I read. I can say that the mode is a stress relief from using voice all day ...perhaps more than I should.
> from Amateur radio that had no desire to use morse code.
> Hopefully next year tens of thousands of US citizens will be able to take
a

Ya know what Keith ..I hope you are right ...I have no interest in keeping the ham radio light under the bushel basket. But I am going to venture a guess that we will not see this huge influx of people into our service because of the necessity to study and spend time to pass a test. You will see this when Uncle Sam gives away the ticket to any comers without the written

written exam and talk anywhere on the ham bands and if they want to use
> morse code they can, just like they can use packet without knowing how to
> decode packet by ear.
Non-sequitor ....apples and grapefruit comparison which has been beaten to death in the same light as "CW always gets through"

Eliminate the Morse Code test in 2004!

Keith ..... CW will be used long after our deaths will occur due to the
simplistic-elegant nature of the mode.
It is sort of a sorrow in my mind that people don't even give CW a chance
....at 5 WPM. I could buy the argument at 13 or 20 WPM.

Hello Vito .....

Shelfish ...well some people are allergic to that stuff just like they are
not motivated to even try at 5 WPM a mode which offers a simple elegant
means of communication.
If someone tries it and finds that it is stupid, archaic i.e. buggy whip
like then go to phone. BTW this buggy whip - standard shift comparison
belongs in the crapper with the "CW always gets through" mindset.

Take care Vito ..

Well, if CB were recognised as a separate service there might be a little
more harmonisation between countries. Like for example, UHF CB wouldn't be

on 462 MHz in one country and 905 MHz instead in another. It might actually be useful but I don't actually use CB, so it's hard to get worked up about it.

Doing chores, manual labor, walking at least part of the way rather than
driving, etc. Also, there was a lot less processed food around.

Today we are surrounded by easy, inexpensive food that is bad for us. Check out
how much sodium, sugar, and bad fat is in most processed food. It's enough to
make carbohydrate addicts out of most of us!

Most of all, getting fat was an expensive proposition back then!

>Technology is partially to blame.....

Exactly. It has made a sedentary lifestyle possible for millions of Americans.

Didja hear the latest, Kim?

Almost all of the US troops, and all of the US aircraft and other major assets,
are being pulled out of Saudi Arabia. Something like 100 military advisers and
training consultants will stay to help the Saudi military learn to use the
hardware they bought from us.

One of OBL's biggest beefs with the West was the presence of "infidel
Crusader/Zionist armies" in the holy land of Arabia. Big recruiting tool - note
how many of the Sept 11 hijackers were Saudis. (I don't think any were Iraqis).
Soon all but a few of those "crusaders" will be gone. OBL gets his way?

I took and passed all the code tests, and administered hundreds to others as a longtime VE. So far I've never encountered anyone who was being forced to take any test. Each and every one was there willingly and completely voluntarily.

Vipul:

Ah, the "No-code Tech with BSEE" argument. It's an old one, but I guess it's about as good as the NCTA gets. Funny thing is, the only hams I've known with actual BSEE, MSEE, or PhD EE degrees were also CW loving and using Extra-class hams who were entirely in favor of retaining the Pre-Restructuring code tests. They were also very interested and active participants in the latest digital modes. However, all the new No-Code Techs I know are mainly self-limited to the local 2-meter FM repeater -- and use their participation in Public Service events as the main justification for their Ham Hero status. Funny how that works in real life.

I know an EE that loves CW. He is a software tester, has an amateur radio licence, but does not belong to IEEE. I don't believe a self respecting EE would be CW loving.

My last antenna Prof. never heard of Ham radio. Ham radio is an operator's hobby, not an electronics hobby.

Its nice that you know some EEs that love code.

>However, all the new No-Code Techs I know are mainly
>self-limited to the local 2-meter FM repeater

Perhaps not feel welcome by the CW lovers. Some people with BSEEs have designed circuits, not limited to repeaters. But, the code requirement restricts their ability to design circuits <"legally"> on HF frequencies, as I have.

>Funny how that works in real life.

Its funny. Its also sad.

Thats not public service.

That could be emergency communications. The Hams at the event I attended also had this ability to set up equipment fast, so I will believe that.

What percentage of Hams really are that capable and can be relied on for emergency communications?

>

Again there is no difference between ham radio operators and amateur radio
operators. Some like these elements and some hate them.

Amateur radio is about communicating. YOUR definition (experimenting with
circuits, troubleshooting, tuning, direction finding) leaves out the
communications element and so is invalid.

> Sometimes I wonder why the FCC puts up with amateurs.

Right now. Some Hams have this bold overconfident attitude. Expecially those CW lovers that want to impose CW on others.

Once day FCC might want some real reasons to keep the hobby (for example, actually succeeding in 97.1 goals). Then those Hams may not be so overconfident.

They don't REQUIRE it, but I've heard some FCC interviews for regulator jobs.
I'm sure they would consider an amateur radio licence an asset. It shows
interest.

> stunted abilities bound up in a unique, singular skill that is no
> longer needed in the rest of the radio world or all society.

Here is one theory on that. This theory is also known outside amateur radio.
Its the "oppressed outcast".

They know their skill is useless in industry, emergency communications, and
even amateur radio (except as their artificial validation).

They know society would not care about Morse code skill. Also, many Hams tend
to be fat, anti-social. Ham radio is where these people can turn the tables
around.

So, they take a learnable skill and claim superiority for learning this one
skill. They can claim they are superior to BSEEs, when BSEEs can design
circuits and all they do is operate. They use this to block entry to a higher
class license. Code lovers, or "clovers", recruit new members with the strong
desire to learn this skill.

Now, the oppressed outcast is superior in this context.

But non-licensees are not permitted to operate amateur radio
transmitters. There can do their thing on FRS or CB, but not
on ham radio.

Check the FCC rule - full ID is the type of a/c followed by
all the characters after (but not including) the "N" in the FAA
registration ("tail number") while the "abbreviated" ID is the
type of a/c followed by the last three characters of the tail
number. In this case both would be "Beech 2 Echo Yankee", or
would it be "Beechcraft 2 Echo Yankee", no?

I not longer make that claim that I support amatuer radio.

> Also, he makes all these grandiose assertions about Amateur Radio (cult,
>etc), and how "anti-social" Amateur Radio supposedly is, yet he's never once
>"enlightened" us with his on-the-air activities.
>

I've been on HF phone on 40 meters at an event I went to. Yes, they were
cult-like in how they followed contest rules.

One of them "protested" by making contacts that were taken out of the contest.
He then claimed he would submit these additional contacts as protest of the
contest removing those contacts.

By the way, who comes up with the contest rules?

Also, an adult ask "why are you making that contact?"
One of the children, replied "I can get my 10-10 at the same time".
Then, the adult said "You don't want to do that. Its not proper".

The same child told another child, he was "not good enough" since he did not
know CW yet. The other child said he is in the process of learning CW.

Also, at a recent club meeting, someone had a CB reference menual. People
expressed unhappiness and wanted to get rid of that publication.

The operated through the night.

Cult like in their following of contest rules.
Anti-social in that they kept at their station, when there were plenty of other
activities.
Fat because they ate alot.

>.Yet NO ONE
>has ANY idea as to what "clubs" they are supposed to be, because even people
>who live in his neighborhood don't know what the heck he's talking about.

They are clubs called "XXX Amateur radio society". I have mentioned them.
Perhaps I should not have. I have told some of them in person that "I am not a
Ham". I wish I had asked some of the other questions I wanted to ask them.

I'm not buying. Each member of the public has the very same opportunity
for obtaining an amateur radio license.

The broadcast spectrum is public property. Can you set up your own
broadcast station simply because you want to?

National parks are public property. Most of them charge for use. If
you don't have the money to pay the fees, you don't use.

From: k4yz:

>Yeah...anti-social...That's why they organize all these hamfests...so they
>can go out in public and NOT socialize with people.

Yes, they just stay at their radios, operating contests and random contacts,
while others are socializing.

> If Amateurs were the only ones invited, it was not "random".

Isn't that the point I was trying to make?

>You yourself have stated, in this VERY forum, that Hamfests were controlled
>by "only coders" who had NO interest in doing anything BUT Morse Code related
>activities.

I never said only coders control Hamfests. I only said is is POSSIBLE to be an
only coder.

This event was a gathering of a few Hams, not a Hamfest.
Plus, they mentioned several modes in the ad. So, by definition, it was not a
meeting of only-coders.

>But you stated Hamfests were "only coder" events?

No, I never said that. Also, this has nothing to do about random selection. No
need to change the subject to take me away from my point about random selection
of Hams.

> There's your problem, Vippy...You spend entirely too much time at the
>concession stand and too LITTLE time in the hamfest events! If you hang
>around
>food, you're going to see people eating it!

Again, this meeting was NOT a Hamfest as you keep confusing it. It is a meeting
of a small group of Hams, not a Hamfest.

It was a small area. Eating occured often. Snacking occured in the operating
area also. There is no way I could NOT see someone eating!

>Proves WHAT? That over the course of a day people eat...?!?!

Each and every person took a huge amount of food. I know that. It was hard to
miss that.

>WHAT "free food"...?!?! The only "free food" I ever saw was at LOCAL club
>meetings, NOT "hamfests", and then only becasue everyone brought their own
>covered plate.

This was a meeting of Hams, not a Hamfest. They gave away beer to people that stopped at their station. There was plenty of food for them and others. Even with the people that showed up, there was STILL food left over (which they finished by eating).

It was free, since I just showed up and did not have to pay for it. I considered contributing biscuits. But I guess that was too healty for them and they did not take my contribution. Another person contributed a salad. Nobody ate that item either.

>>I try to make use of events that have food served. You can do the
>>same - its fun!
>
> How can THAT be? You spend sooooooooooo much time belittling people who
>eat, Vippy!

Because I know when I can get the free food at club meetings, and now at Ham gatherings like this. I can do this without over-eating. I see others over-eat at the same event.

>>They just went unbelievably overboard.
>
> Kinda like some of your assertions in this forum, Vippy?

So, you agree with that.

I worked with a county north of my county a couple years ago in a consulting manner, and we were doing the same thing. Damn it was a busy day!!

We found that the ham gear, and repeaters etc. outperformed the fire service gear in that county! And they were using 80-110 watt range radios! (compared to 40-50 watt range ham mobiles) Based on a variety of factors that county has to deal with, the suggestion of using the remote recievers with the repeaters definitely cleared up the majority of their problem.

From N2EY:

>>By the way, the Hams I saw on ATV
>>that day often (but not always) were overweight also.
>
>Again, not a random sample.
>

True. They had to have ATV. They were often overwieght, and anti-social. I doubt this would be accepted outside Ham radio.

>>And, Hams are often antisocial (but in a good way, I guess).
>
>The term you are looking for is "introverted".

Perhaps not introverted, perhaps extoverted. But the word isolated (to only the radio community) fits. This makes them anti-social.

>Didn't they teach you about the scientific method and random sampling in EE
>school?

Thats my point. This was a random sample.

>Apparently you do not know the meaning of the term "random sample".

I have never seen these people before. The event was a radio event, not an eating event. Please tell me how this group was not a random sample.

>Not a random sample at all. You chose for a reason. So did all the others who
>attended. Therefore, it was not a random sample.

They contacted me first. I chose to attend because they had several radio activities.

Are you saying that Hams that participate in several modes tend to eat more than those that only use a few modes?

How is this not a random sample in a way that is meaningfull?
>I don't know of any reason why more
>>overweight people would chose to attend Hamfests.
>
>I do. Here are some reasons:
>
>- the food
>- they are not out exercising or working
>- they don't have to take care of children.

>- it doesn't take much effort

Those are good reasons.

>Right there you have a BIG selection process that destroys the randomness of
>the sample. Folks who eat moderately and eat the right things aren't going to
>be very attracted to an all-you-can-eat gathering that serves lots of
>high-fat,
>high-sugar foods. On the other hands, folks who like to chow down on that
>sort
>of stuff will be drawn to it.

I don't know anyone who came more for the food than for the radio events.

People who eat moderately, like myself, would refuse excess food. They ate more food because thats how they are, not because more food was available.

>> Other
>> interests, such as radio direction finding use more physical activity.

>What does your theory prove?

Simple.
Hams like contesting instead of radio direction finding.
Contesting is both more boring, and requires less physical activity.
The interesting activities happen to require more physical activity.
Hams contest more and do radio direction finding less.
This makes Hams boring and fat.

If anything would turn off a prospective newbie to ham radio, I am sure that would be it. I am not saying we need to get all flowery etc., but if we want to continue to increase our ranks, even at the slow (but steady) pace that it has been, then we need to work on the PR side of the hobby. How many clubs out ther have a Publicity or Public Relations person, and how active is he/she?

>

Probably from a bad experience in the past, and now uses it in broad-sweeping generalities for the whole ARS when it occured locally. I guess there will always be people like that in any group....

Cool! You play hockey?? 17 of my 33 years was devoted that wonderful
sport! I still think that alot of hams are more of the "homebody" type....
Hell, I am the opposite, the amount of time spent at home for me is pretty
much only for the sleeping and showering thing.

Possibly true, as the minute you step outside of the city limits of Midland, MI, you are in the boonies and I am sure cell coverage is marginal. I haven't tested the overall capabilities of my cell phone within my county, but I am quite sure there are alot of "dead spots."

Were you?

> Did he ever join ARRL?

Did you?

> Could he do morse code?

Could you?

See you're an awfully lot like Old Blood and Guts.

> Tell us about your Novice Class amateur radio experiences in
> Vietnam, mighty morse warrior. Did you "hone your skills" there?

I was a Novice seven years before my arrival in Viet Nam at age 21. My amateur radio skills and military skills were already honed prior to my arrival. Unlike your rear area service during the Korean War, I was actually stationed in the country where the conflict was taking place. I love it when a fellow like you starts telling someone who didn't serve in the military about your having put your life on the line.

You're a humbug.

> My target for tomorrow is to run 37 minutes.

Without being chased??? Just kidding, I am getting the bike back out and
trying to ride at least 1 hour per day, to help shed some of my winter
weight.

Another societal factor is that in the "olden days" cities were small units
with everything fairly close together. Now for example, I drive 12 miles to
work on a daily basis, as well as going to a local college for classes that

is about 30 miles away. Back in those olden days, most places that a person needed to go to might have been only a three mile walk at best. I sure as hell would not want to have to walk that much during the average day (12+ miles) as I would probably be spending as much time walking to work as being there!!

>Thats not public service.

Sure it is! No pre-existing emergency existed and it was planned to
support a public event.

THAT is "public service"

>That could be emergency communications. The Hams at the event I attended also
>had this ability to set up equipment fast, so I will believe that.

It COULD have been "emergency communications" had someone ben injured and
required assistance.

That is PART of the purpose of "public service" communicatioons...to help
prevent emergencies from manifesting.

>What percentage of Hams really are that capable and can be relied on for
>emergency communications?

Does it matter? In many cases it is far more prudent to have a small
number of well trained persons, rather than a large number of well-intentioned
but untrained persons.

Steve, K4YZ

It's "comments" like this that betray your actual "experience" at Amateur
Radio functions, Vippy.

Did you ever hear that old saying that goes "It Is Better To Be Silent And
Thought A Fool, Than To Open Your Mouth And Confirm It"...???

You need to stop sitting around your apartment, get out into the REAL
world and see what life is really like before it passes you by. Making these
stories up is foolish, too.

>> If Amateurs were the only ones invited, it was not "random".
>
>Isn't that the point I was trying to make?

Who knows? Your subject matter in sentences is so fractured at times that
it's difficult to follow.

>>You yourself have stated, in this VERY forum, that Hamfests were controlled
>>by "only coders" who had NO interest in doing anything BUT Morse Code
>related
>>activities.
>
>I never said only coders control Hamfests. I only said is is POSSIBLE to be
>an
>only coder.

You have very specifically stated on SEVERAL occassions that hamfests were
"only coder" controlled funtions.

You need to keep your stories straight, Vippy.

Perhaps a notebook divided into various rant topics so you can remember
what you've said before? And don't forget to cross reference, ie:
only-coder-hamfests

>This event was a gathering of a few Hams, not a Hamfest.

How can we tell? You keep making reference to different "meetings" but you refuse to identify who these groups are, where they meet, the officers of the club, etc.

Personally, I think you're making it up as you go to have the >appearance< of being factual. Depending on the circumstances, "making it up" can also be called lying. So far, I think you're just being a smart alec with a bad sense of humor. The line is rather thin, however, and you are wavering...

Steve, K4YZ

589. Defining CB vs "Land Mobile" Radio

Newsgroup: rec.radio.amateur.policy
Date: 2003-05-08 13:57:19 UTC
From: k4yz@aol.com
Message-ID: <20030508095719.06080.00000013@mb-m29.aol.com>

>Well, if CB were recognised as a separate service there might be a little
>more harmonisation between countries. Like for example, UHF CB wouldn't be
>on 462 MHz in one country and 905 MHz instead in another. It might
>actually be useful but I don't actually use CB, so it's hard to get worked
>up about it.

This would require some sort of international convention on what "citizens band" should be. There ae countless users of "land mobile" radio, and trying to define each and every one of them would be a never-ending task.

All licenseless communications and one licensed mobile service in the United States are presently under Part 95 of the FCC's rules and regulations. Each subpart (Citizens Band, General Mobile Radio Service, Family Radio Service, Radio Control Service, and others) has it's own "purpose", but none of those that permit voice operation dictate the content of the messages.

CB has rules on power and distances authorized, but the FCC thinks it can dictate physics...It was foolish in the 1950s, and even more foolish today!

Considering there are over 150 signatories to the ITU, which means over 150 different ideas on what "land mobile" should be, I think it would be easier to divide it into "commercial land mobile" and "private land mobile". Those categories are broad enough to allow the individual nations to decide for themselves, yet provide some greater protection for those entities that need radio but are presently impacted by non-commercial users, ie CB.

>Subject: Re: The need to save the Novice Class license
>From: vshah101@aol.com (Vshah101)
>Date: 5/7/2003 10:14 PM Central Daylight Time
>Message-id: <20030507231442.21674.00000768@mb-m16.aol.com>

>Right now. Some Hams have this bold overconfident attitude. Expecially those
>CW
>lovers that want to impose CW on others.

Present regulations on Morse Code qualifications are "imposed" by the
Federal Communications Commission as is required by Congress due to treaties
signed by the United States Government.

No one is "imposing" CW on anyone other than that required by LAW...You
know, Vipul...those collections of rules and regulations created for the common
good of society. (Notice that is "common" good...not necessarily what YOU
like)

>Once day FCC might want some real reasons to keep the hobby (for example,
>actually succeeding in 97.1 goals). Then those Hams may not be so
>overconfident.

Who's "overconfident", Vippy?

Amateur Radio already meets the criteria of 97.1...97.1 does NOT specify
any MODE to be used in achieving those goals.

Please specify IN DETAIL how ""the hobby" is NOT meeting the requirements
of Part 97.1.

IN DETAIL, Please...

>
>I did not conceal that. I identify myself with my name, not my callsign.

No, you have yet to sign ANY post I have ever seen from you as "Vipul" or
"KB1HMW".

You did, in one post a week or two later, admit that you were KB1HMW, but
have yet to sign it to a post.

>> Despite repeatedly stating he "supports" Amateur Radio,
>
>I not longer make that claim that I support amatuer radio.

Good. You never WERE "supporting" Amateur Radio before, so by dropping
your "support" claim, you are no longer lying.

>> Also, he makes all these grandiose assertions about Amateur Radio (cult,
>>etc), and how "anti-social" Amateur Radio supposedly is, yet he's never once
>>"enlightened" us with his on-the-air activities.
>>
>
>I've been on HF phone on 40 meters at an event I went to. Yes, they were
>cult-like in how they followed contest rules.

"Cult-like" in following rules?

Rules should NOT be followed? Then why have them? Let's just let
everyone gang up on top of each other yelling aimlessly at each other!

(What an idiot...!!!)

>One of them "protested" by making contacts that were taken out of the
>contest.
>He then claimed he would submit these additional contacts as protest of the
>contest removing those contacts.

Contests have time limits and contact criteria...It is those criteria
against which participants are judged.

If they ignore that criteria and jsut do what they darn well please, then
it's not a fair assessment of one competitor against another.

In other words, it's cheating. Cheating is also lying.

>By the way, who comes up with the contest rules?

The contest sponsor, vippy...Just like for those cereal box contests, Miss
America, NASCAR, etc etc etc.

>Also, an adult ask "why are you making that contact?"
>One of the children, replied "I can get my 10-10 at the same time".
>Then, the adult said "You don't want to do that. Its not proper".

Obviously someone was trying to teach the child the rules of the contest.
You obviously don't understand them either.

>The same child told another child, he was "not good enough" since he did not
>know CW yet. The other child said he is in the process of learning CW.

I think this was a VippyLie thrown in to try and validate the preceeding.

>Also, at a recent club meeting, someone had a CB reference menual. People
>expressed unhappiness and wanted to get rid of that publication.

"CB reference menual"...?!?!

WHY would someone bring a CB radio book to an Amateur Radio operating
event, Vippy? Of what purpose was it? Of COURSE you need to get rid of it!
You shouldn't have brought it in the first place.

>The operated through the night.

Do you know what you call contest operators who do NOT operate "through
the night", Vippy?

>Cult like in their following of contest rules.

You mean they followed the rules "religously"...??? They SHOULD!

>Anti-social in that they kept at their station, when there were plenty of
>other
>activities.

In the contests, being AT the station IS thier place, Vipul. One does not
accrue contact points otherwise.

>Fat because they ate alot.

This pertains to what?

>>.Yet NO ONE
>>has ANY idea as to what "clubs" they are supposed to be, because even people
>>who live in his neighborhood don't know what the heck he's talking about.
>
>They are clubs called "XXX Amateur radio society". I have mentioned them.
>Perhaps I should not have. I have told some of them in person that "I am not

>a
>Ham". I wish I had asked some of the other questions I wanted to ask them.

I think the "XXX" you refer to was an adult bookstore and you ahve your stories crossed again.

And if you have named the clubs, I have never seen them. And that is probably best for THEM, for if I had a member in a club >>I<< belonged to as obviously anti-Amateur radio and anti-everything else as you, I'd not want anyone to know about you.

Check ICAO Phil. Full ID is required on initial contact, then abbreviate
callsigns may be used once positive ID has been established.

Then you should be aware of regulation that affect specific users other
than United States or FC, Phil.

Being proud of not helping people is nothing to be proud of.

They are assuming you have the basic skills needed to do the work. I took a short training course in SkyWarn recently. It only took an hour or so. But the other skills were acquired long befor this.

Time for the old story about the computer repairman:

A person brought in a computer monitor to be repaired. The repairman took a look at the monitor, removed the cover, and looked around for a moment. After about a minute, he removed a fuse, and put in a new one. This fixed the monitor.

He then handed the owner a bill for 100 dollars. The owner was angry because he saw that the repairman only replaced a cheap fuse. The owner demanded an itemized reciept.

The repairman made one up that read:

Fuse $0.50

Knowing where to look: $99.50

Total $100.00

HAR! A majority of people when faced with an emergency, will either panic, appear relatively calm but make very poor decisions, or slink away in order to not get involved.

This includes hams and non-hams. But since there are people who get involved in amateur radio because they want to perform this sort of service, Hams are more likely to perform well under pressure on average, IMO.

As a person who is proud of their lack of participation in public service, which type are you?

Sure it was. The proceeds went to charity. Our club volunteered our
time. That's public service.

Dunno. I could, given access to the equipment (I do have). Most of the
hams I hang with could. Many of us have the proper vehicles to get to
the good places to put up one of these. Ya gotta hang with the right crowd.

"No go off"? What is that supposed to mean?

Did you intend to write

"Now go off in PRIVATE e-correspondence and give each other high-fives
for keeping secrets and chuckling among yourselves." ?

And you say Morse code is error-prone?

The fact is that I have told many people about my work experience in
public, not private, "e-correspondence". Like 7035 kHz CW. Anyone with
the proper license, equipment and skills can listen in. Not private at
all.

You bet! I know many people think I'm nuts for playing at my advanced age, (48) but it is so darn much fun that I can't quit. It is also a blast that I can play competitive Ice Hockey on the same team (often the same line) with my kid. I have not found a stress reliever yet that can compare. We take it all out on each other on the ice, and off-ice we're all just big teddy bears! 8^)

I've been Captain for about 4 years now, and play Defense mostly. I'm not as fast as the fastest players, but then the fastest ones are less

than half my age, but I'm fast enough to keep right in the play. Most of the other teams players don't think I'm very nice - but they use other descriptive terms.

Seeing how some of the posters in here are showing signs of stress induced crankiness, I heartily recommend they think about taking up a good contact sport.

- Mike KB3EIA - Captain of the NHL's Dragons (Nittany Hockey League)

Darn right! These Iron men things were grueling, and it is a miracle
that more people aren't hurt. They do some of the craziest stunts. It
takes lots of spotters, and lots of good communications.

> That is PART of the purpose of "public service" communicatioons...to help

No.

"November Two Echo Yankee" is required. Identification of
the aircraft type might precede the tail number ID, but the
nation designator prefix must be used ("N" in this example).

>The Army is not the entire "Armed Forces of the United States", btw.

The US Army is the largest US military branch, about 100 thousand
more than the US Navy, the next largest branch.

You've never worn any US military uniform in service of your country.

>It has been clearly shown in another post that the level of Morse skill
>required of Morse-skilled US military radio operators was far, far, FAR above
>that required to pass the current amateur test.

Too many "fars" in your sentence, Rev. Jimmie.

>The "Armed Forces of the United States" used those aptitude tests to find
>the recruits who would be easiest to train to the skill level they required.
>The required military skill level was far, far, FAR above the 5 wpm amateur
radio
>code test.

Too many "fars" in your sentence, Rev. Jimmie.

You lack both military experience AND first-hand knowledge of
US military communications. As such you cannot possibly
compare US amateur radio requirements to what the US military
requires in communications.

>> Do not try to misdirect on "Technician Plus" testing. The "debate"
>> was on the NOVICE CLASS.
>
>Not misdirection at all. Just proof that your line of 'reasoning' is flawed.

It was misdirection and now you are trying to rationalize it.

I had no "flaw" in "reasoning." I just reminded you of what the
Subject line in the message header has.

You get SO sensitive to errors that you make!

>FCC closed off the Technician Plus class from new licensees even though it
>was growing steadily.

The only "closing" was of the class of license. No one had their
license grant removed or anything else. Tsk, tsk, tsk.

The message header line says "Novice Class" in the Subject line.

It doesn't say "Technician Plus." Tsk, tsk, try to focus.

>Not at all. The Technician class was also growing. Still is, in part due to
the
>renewal of all Technician Plus licenses as Technician.

Irrelevant.

The message header line says "Novice Class" in the Subject line.

It doesn't say "Technician Plus." Tsk, tsk, try to focus.

>>>> The decrease in license numbers was so much and for so
>>>> long that it was obvious to all who bothered to examine that
>>>> Class. The FCC dropped the Novice Class from any new
>>>> license grants following the recent restructuring.
>>>
>>>The FCC also dropped the Technician Plus and Advanced Class from any new
>>>license grants in the same restructuring.
>>
>> Irrelevant again.
>
>Not irrelevant at all. Technician Plus class was growing, yet it was closed to
>new applicants, just like the Novice.

Irrelevant.

The message header line says "Novice Class" in the Subject line.

It doesn't say "Technician Plus." Tsk, tsk, try to focus.

>> ARRL statements for several years prior to 1991 did not
>> think so...they were pushing the NOVICE Class as the
>> "entry" license. They continued to do that for several
>> years following.
>
>Where is that stated explicitly?

In the editorial pages of QST...in the ads for ARRL filling in
space in the rest of QST...for years.

Novice Class license was considered the "entry level" class
to begin the amateur radio experience in the USA according
to ARRL documents.

That has changed in the last few years.

If you need it more "explicit" you ought to go to porn sites.
:-)

>>>> The only US amateur radio license class that kept growth in
>>>> US amateur radio license totals was the no-code-test
>>>> Technician Class.
>>>
>>>Incorrect.
>>
>> Sorry. VERY CORRECT.

>
>Sorry. Incorrect.

Poor baby. Crying his lil heart out, banging his lil fists on the
keyboard...wah, wah, wah, I'm correct and you are wrong, wah,
wah, wah!

All those numbers were given some time ago in here and you
just refused to acknowledge them. Tsk, tsk, tsk.

>> Two hundred thousand NEW
>> no-code Technician Class licenses between 1991 and
>> mid-2000 make you very wrong.
>
>How do you know that all of those Technicians were not code-tested?

1. There is NO morse code test required to achieve the pre-
Restructuring Technician Class license.
2. It wouldn't make any difference to you if all were polled
for past ham testings since you would refuse to accept
such information and keep trying to make a Big Case
out of your fantasies.
3. See the message header Subject line up there?

>More important, how do you know that none of those who obtained a Technician
>license in that period would have done so if a code test was involved?

How do I know you are fully rational and not insane?

I don't and there are many hints in your posting and preoccupation
with accepting only desired data and rejection of other data
against your viewpoints. I'll put you down as "borderline."

>What does your crystal ball say?

Do you believe in "crystal balls?" I think you are progressing
towards insanity.

I don't have "crystal balls." Do you have "crystal balls?"

>>>The above 'alternate history' statement assumes that none of those who
obtained
>>>Technician Class licenses after February 1991 would have done so if that
>>>license had not lost its code test. That is clearly incorrect.

I'm beginning to wonder if you worked with the Iraqi Ministry of
Information prior to March 9, 2003. There's an eerie resemblance
of rhetoric of yours to theirs.

Try to remember what happened to that government.

>> You cannot possibly know the motivations
>> of two hundred thousand no-code Technican Class licensees.
>
>Neither can you, Len. Yet you ASSUME none of them would have gotten amateur

>radio licenses if a code test were involved.

Okay, Mr. Minister, PROVE that they were eager and ready to take
code tests. Beyond a shadow of a doubt. :-)

>How? Was there no growth in the number of US hams from 1980 to 1990?

Not in the Novice Class.

Remember that message header Subject line? What it say?

Didn't say anything about totals of licenses, did it?

>How do you explain the FACT that US amatuer radio grew as much in the '80s
>(when all licenses required a code test and there were no code test waivers)
as
>it did in the '90s (with waivers and a class of license without a code test)?

Tsk, tsk, tsk.

There is NO "amatuer" radio in the USA, not now, not ever.

If you keep making all these errors and mistakes, no one will
take you seriously...

>Then explain the FACT that US amatuer radio grew as much in the '80s (when all
>licenses required a code test and there were no code test waivers) as it did
in
>the '90s (with waivers and a class of license without a code test).

See? You did it again. Bad puppy...

>Then explain the FACT that US amatuer radio grew as much in the '80s (when all
>licenses required a code test and there were no code test waivers) as it did
in
>the '90s (with waivers and a class of license without a code test).

Number 3 in a series. Tsk, tsk, tsk.

>Not at all. You are the one who cannot admit a mistake.

I know how to spell "amateur," mistah perfect. :-)

>Nope. It's the credibility of the source that matters. You don't have much.

Tsk, tsk, tsk, the mighty resort to personal attacks when
outraged. Their typing goes into rage-induced error mode again.
:-)

Poor baby.

>The fact is that YOUR statements are suspect due to your long history of
>unadmitted mistakes and faulty reasoning.

Poor baby. Are you living in the same remote galaxy as das Oberst?

>> longer needed in the rest of the radio world or all society.
>
>Here is one theory on that. This theory is also known outside amateur radio.
>Its the "oppressed outcast".

That analogy seems applicable.

>They know their skill is useless in industry, emergency communications, and
>even amateur radio (except as their artificial validation).

Yes and no. Most mighty morsemen are very proud of their
mighty skill...but that may blind them from the harsh reality
of all other radio services dropping morse as a communications
mode or never even considering it in the beginning.

>They know society would not care about Morse code skill. Also, many Hams tend
>to be fat, anti-social. Ham radio is where these people can turn the tables
>around.

One person operating a radio alone is the usual picture of being
"in the shack."

CW operators have absolutely no human-sense clue to another
distant operator except through the monotonic aperiodic tones
in their ears. No other audible clues, no voice tones, inflections,
dialect, patois that all other humans hear in normal verbal
communications.

That sort of aloneness allows them a great deal of time to spend
imagining things about the CW distant operator...as well as
imagining things about themselves. The distant operator could
very well be of opposite gender than what they stated...there's no
way to determine that through monotonic beeping of CW.

>So, they take a learnable skill and claim superiority for learning this one
>skill.

That may be their only claim. :-)

>They can claim they are superior to BSEEs, when BSEEs can design
>circuits and all they do is operate.

I could, and was designing circuitry for pay a number of years
before I got my degree. Education, acquired skill in theory,
actual practice in electronics hardware is not dependent on an
accreditation from an academic institution.

>They use this to block entry to a higher class license.

That's a survival tactic. Such is necessary to insure survival of
their rank, status "above" the mundane.

>Code lovers, or "clovers", recruit new members with the strong
>desire to learn this skill.

Another survival tactic, preservation of the "tribe." :-)

>Now, the oppressed outcast is superior in this context.

A very limited context, but they survive and that is the basic
motivation of all humans.

under.
>
>True insofar as it goes, but I meant it's not recognised as a separate
>service. Unlike, say ... amateur radio, for example.

Throughout Title 47 Code of Federal Regulations, the word
"service" is a regulatory term denoting the type and kind of
radio activity being regulated.

Some radio amateurs have become obsessed with their own
"importance" in a hobby and recreational activity, self-elevating
themselves into some "higher service" to their community,
equivalent (in their minds) to "in service to the nation" or even
"in service to their fellow man." :-)

The really far-out fantasizers want to misuse the "service"
word of regulations as somehow equivalent to military service.
Tsk, tsk, tsk. :-)

612. ARNewsline 1342 - May 2 2003

Amateur Radio Newsline™ Report 1342 - May 2, 2003

Amateur Radio Newsline report number 1342 with a release date of Friday, May 2 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. An all ham crew takes over the International Space Station, another new record on 136 Kilohertz and the FCC asks the Amateur Auxiliary to help clean up the 10 meter band. Find out more on Amateur Radio Newsline report number 1342 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: TWO-MAN EXPEDITION 7 HAM RADIO CREW ARRIVES AT ISS

A two ham Expedition 7 crew arrived at the International Space Station on April 28th to replace the crew currently on board. Amateur Radio Newsline's Roy Neal, K6DUE, has the rest of the story:

- -

There are five men in the crew aboard the International Space Station. Those numbers ARE different. Now that U S Space Shuttles are temporarily out of commission, the Russian Soyuz has been pressed into service as a ferry. Much of its space is filled with food and supplies and the crew size has been cut from 3 down to 2 for the time being.

Two men...cosmonaut Yuri Malenchenko, RK3DUP and astronaut Ed Lu, KC5WKJ, have arrived....the first teamever to get to the I S S aboard a Russian spacecraft. They will replace 3 men...Commander Ken Bowersox, KD5JBP, Don Pettit, KD5MDT, and Nikolai Budarin, RV3FB. That team is scheduled to fly back to earth on the third of May, using a Soyuz that has been docked in orbit since the Columbia shuttle disintegrated killing all seven people on board.

A NASA investigation apppears to be centering on a piece of foam insulation as the cause of disaster...foam that broke loose during liftoff, hitting the Shuttle's left wing.

A final report on the accident may be several more months in coming. Until then Russia's Soyuz is the only crew transport to and from the i s s and the International Space Program has slowed to a mere trickle of its former self. Space officials of the 9 countries directly concerned with building and flying the shuttle are optimistic, saying the delay gives them time better to prepare for the very complex missions of the next ten years.

Roy Neal, K6DUE

--

The two man Expedition 7 crew will spend the next six months on-orbit conducting scientific experiments. Because of the reduced workload they may also have more time for additional ham radio operations and especially school contacts from space. (ARNewsline™ from published reports)

**

ENFORCEMENT: AMATEUR AUXILIARY ASKED TO ASSIST FCC IN 10 METER CLEAN-UP

Back on Mother Earth, the FCC has asked the assistance of the ARRL' s Amateur Auxiliary as part of a clean-up of illegal users of the 10 meter band. In a memorandum issued on April 28th, FCC Special Counsel Riley Hollingsworth, K4ZDH, asks the Auxiliary's help for the next 6 months in identifying any unlicensed operation using the 10 meter Amateur spectrum.

From May through October Auxiliary members will be tasked with monitoring the band to determine whether interlopers are domestic business entities. This includes trucking companies, truckers or other individuals who are not licensed to be in the band or simply not licensed at all.

The FCC is not requesting that Auxiliary members provide direction finding. Hollingsworth does ask that where possible that Auxiliary members provide the names and cities of the operators, and license plate numbers and state if the interfering signal is coming from a vehicle.

The project has been assigned case number 2003-583 and Hollingsworth does ask Auxiliary members to use their best judgment as to whether to include tape recordings of what they monitor. Authority to use the ham radio volunteers in this investigation comes under the terms of long standing agreement between the FCC's Field Operations Bureau and the American Radio Relay League. (FCC)

**

ENFORCEMENT: 11 METER OPERATION BRINGS FCC WRATH TO IDAHO HAMS

Meantime, the FCC has let a trio of Idaho amateurs know that unlicensed operation outside Amateur Radio frequencies could lead to revocation of their ham tickets. Bruce Tennant, K6PZW, has more:

--
The ARRL Letter reports that FCC Special Counsel Riley Hollingsworth, K4ZDH, recently wrote three Boise amateurs, citing allegations that they had transmitted without a license on several frequencies near the 11 meter Blass D CB band.

Letters went out March 17 to Dave Every, KD7QAS; John F. Hail, KD7QAW; and Tom M. Sjoberg, KD7RCS. Every holds a General ticket, while Hail and Sjoberg are Technician licensees.

According to Hollingsworth, the Commission has information indicating that the three hams transmitted without a license on 26.350, 27.420 and 27.700 MHz using SSB and SSTV. These three frequencies involved are above and

below the 11 meter Citizens Radio Band.

Hollingsworth letter pointed out that in addition to the possibility of license revocation proceedings being undertaken, fines for unlicensed operation could also be imposed. These normally range from $7500 to $10,000.

For the Amateur Radio Newslione, I'm Bruce Tennant, K6PZW, reporting.

--

Hollingsworth says he understands that the unlicensed operations have ceased. (ARRL)

**

ENFORCEMENT: KANSAS STATION OWNER FINED

The FCC has fined Maria L. Salazar, licensee of Station KTCM - FM in Kingman, Kansas, and owner of an antenna structure near Spivey, Kansas, thirty-nine thousand dollars. This, for what the Commission says are willful and repeated violations of the Communications Act and of the Commission's Rules. Amateur Radio Newsline's Bill Pasternak, WA6ITF, has the details:

--
Specifically, the regulatory agency says that Maria L. Salazar operated a radio station from an unauthorized location and that she failed to maintain prescribed obstruction lighting on an antenna structure. But thats not all. Te FCC says that she also failed to install and maintain Emergency Alert System equipment at the station, failed to maintain a main studio at an authorized location and failed to maintain a public inspection file.

By way of background, on July 18, 2002, the Commission issued a Notice of Apparent Liability for Forfeiture -- better known as a fine -- in the amount of $39,000 to Salazar. Although she received a copy of the N-A-L, she never filed a response. So the FCC has now affirmed the fine and ordered Salizar to -- pay up.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF.

--

The FCC has instructed its Enforcement Bureau to do a follow-up investigation to determine whether Salazar has come into compliance. If not, further enforcement action will be taken. That could include the possibility of a license revocation proceeding. (FCC)

**
Break 1

(5 sec pause here)

**

FCC BEGINS INQUIRY REGARDING BROADBAND OVER POWER LINES

The FCC has also launched an inquiry into the use of existing power lines to send and receive broadband data by carrier current as some old timers might call it.

According to Bob Gonsett's CGC Communicator, two different Broadband over Power Line or B-P-L techniques are being considered. "Access B-P-L" uses 1,000 to 40,000 volt power lines to bring Internet and other broadband data to homes and offices. "In-House B-P-L" uses existing electric utility wiring to network computers and printers - as well as smart appliances - within a building.

CGC notes that today's chip sets for this application are capable of generating RF out to at least 80 MHz using advanced modulation techniques and high data rates. The question of radio frequency interference to authorized spectrum users including Amateur Radio will be an important consideration as these systems are looked at by the FCC.

More is at the FCC's website at:
http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-233537A1.doc
and http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-100A1.doc
(CGC Communicator)

**

HAM RADIO TESTING: NCVEC REMOVES PSK31 QUESTION FROM POOL

The NCVEC Question Pool Committee has withdrawn the use of a test question has in the Technician pool scheduled for use starting July 1st. The querstion designated number T2B17 deals with PSK-31 communications technology.

Again, this is for the new Technician class exam that goers into service on July 1st. The committee says that it apologizes for any inconvenience. (NCVEC)

**

RADIO RULES: FCC REFUSES TO EXPAND THE NCE FM BAND

The FCC has declined to expand the Non-Commercial Educational FM or NCE broadcast. This, band beyond its current limits of 88.1 to 91.9 MHz.

Specifically, the FCC says that television Channel 6 which runs from from 82 to 88 MHz will not be used for NCE radio. Nor will the upper end of the current NCE band be expanded to 93.9 Mhz.

That said, the agency has indicated the expansion issue could be revisited in another FCC proceeding. (CGC Communicator)

**

RADIO LAW: CALIFORNIA PRB-1 LIKE LAW ON TRACK

ARRL Southwestern Division Director Art Goddard, W6XD, reports that the California limited antenna structure protection measure passed the state Assembly on a vote of 67 to nothing on April 10th. Writing in the division electronic newsletter, Goddars days that the bill, patterned after the ferderal P R B One, was then sent to the state Senate where it received its first reading. It now awaits assignment to a Senate committee and further action. (ARRL SW Div. Newsletter)

**

HAM RADIO IN CYBERSPACE: MIZUHO WEBSITE BACK UP

KU4QD says over the VHF Reflector that the unofficial English language Mizuho website is back up. This site is dedicated to Mizuho built ham radio gear and contains a wealth of reference material that's hard to find anywhere else.

For those of you who don't know about Mizuho, it is a family run business started by a former Trio engineer over 30 years ago. The company is best known for its HF and VHF SSB and CW monoband handhelds. These were manufactured from 1981 until 2002. The company also made some VHF base and portable SSB/CW rigs.

KU4QD says that some of the manuals and schematics haven't been uploaded yet, but everything else is there, including more new pictures and specs for various Mizuho gear. And , oh yes. You will find the website at www.mizuhoradio.com (VHF Reflector)

**

NAMES IN THE NEWS: K8JE TO SPEAK AT MURRAY STATE UNIVERSITY ARC

ARRL Great Lakes Division Director Jim Weaver, K8JE, will visit the Murray State University Amateur Radio Club at the club's May 6 meeting. Weaver will talk on Amateur Radio today and as it will be in the future and all radio amateurs in western Kentucky are invited. The venue is the Freed Curd Auditorium of the I & T Building on the Murray State campus at 7 p.m. local time. Murray State University is located in Murray Kentuckey. For directions contact Ron Ladd by e-mail to UBX@Webtv.net or visit campus.murraystate.edu/org/msuarc (Via e-mail)

**

CONVENTIONS AND HAMFESTS: COLORADO IN MAY

The 2003 ARRL Rocky Mountain Division Convention is slated for May 30, 31 and June 1st at the Holiday Inn Estes Park Conference Center. League President Jim Haynie, W5JBP, is slated to be the featured speaker at Saturday Night's Banquet. For more information take your web browser to www.hamconcolorado.org (Via e-mail)

**

HAPPENING AT HAMVENTION 2003r - THE AMSAT FORUM

This years Dayton Hamvention AMSAT Forum will place special emphasis on the status of new satellite projects such as Phase III E and the Eagle ham satellites which are currently being designed. The speakers list so far includes Rick Hambly, W2GPS, Bdale Garbee, KB0G and Gould Smith, WA4SXM, to name only a few.

This years AMSAT Forum will be on will be on Saturday, May 17th from 8:15 to 9:45 EDT in HARA Arena Meeting Room 1. The session is always standing room only. More is on the web at http://www.amsat.org/amsat/activities/dayton (AMSAT)

**

HAPPENING AT HAMVENTION 2003r - THE ANNUAL TOWN MEETING

And Amateur Radio Newsline is again teaming up with the Hamvention to bring you another in its ongoing series of Ham Radio Town Meetings. Ken Lock, N8PJN, has the details:

--

This years topic is how to make Amateur Radio more friendly for kids so that they will stay in the hobby. Our keynote speaker is Mr. Audio himself -- Bob Heil, K9EID. Bob has been a ham since he was a youngster and has some definite ideas on this subject.

Other presenters include New York Educator Carole Perry, WB2MGP, Philadelphia KYW Radio personality Mark Abrams, NT3V and his son - 2002 Young Ham of the Year award recipient Josh Abramowicz, KB3GWY. Josh will cover scouting and its relationship to ham radio youth.

From Florida Richard Paczkowski, Jr., KF4BIA, will be joining us. Richard was our 1998 Young Ham of the Year award winner. He will talk about ways the Internet can be used to interest kids in the hobby.

Others on the speakers roster are Gary Pearce, KN4AQ, of the ARRL's Public Relations Committee and Keith Glispie, WA6TFD, of Suite Sixteen Post in Burbank California. Glispie is a true Amateur Radio success story that took him from a teenage ham to the co-owner of one of televisions most sought after editing facilities.

Also joining us will be John Creel, WB3GXW, who is the outgoing Chairman of the NCVEC and 2003 Radio Amateur of the Year Larry "Tree" Tyree, N6TR, talking about the ham radio children's holiday he created called Kids Day.

And as always there will be door prizes. This year the goodies include an 2 meter HT courtesy of Alinco and a mini-bom-box AM, FM, Cassette radio from Jensen.

So, please join us at Hamvention 2003 for this special session dedicated to making ham radio a friendlier world for the younger set. Rember, kids are the future of the hobby.

For the Amateur Radio Newsline, I'm Ken Locke, N8PJN.

--

The Ham Radio Town Meeting is from 1 to 3 P.M on Saturday May 17th. The venue is the HARA Arena in Dayton Ohio in meeting room 3. We hope to see you there. (ARNewsline™)

**

HAM RADIO MOVIES: FIELD DAY `71 - REDUX

Two weeks ago we told you that the famed Palisades Amateur Radio Club movie "Field Day 1971" had surfaced after almost two decades in hiding. Now, Southern California hams can get to see it again on Wednesday evening, May 14th. This, in a special screening hosted by the Santa Clarita Amateur Radio Club and Amateur Radio Newsline.

"Field Day 1971" was produced by George Hively, W6GRH, -- then WA6YEA -- over thirty years ago. His half-hour movie is a tongue-in-cheek look at the way one of the regions most famous radio clubs of the 20th century held forth annually to conquer the vagaries of the Ionesphere while having a jolly old time. Or, was it just having a jolly old time with some radios thrown in as an excuse for a hilltop party? Only this movie knows for sure!

The venue chosen for the screening is the City Council Chambers in the City of Santa Clarita California at 7 p.m. Pacific Daylight time. Talk in will be on the 146.79 W6JW repeater. The repeater uses an access tone is 123.0 Hz.

There is only room for about 190 people, so seating will be first-come, first served, with one expeption. If you are a former Palisades Amateur Radio Club member and want to reserve a seat please e-mail wa6itf@arnewsline.org. For more information on the Santa Clarita Amateur Radio Club and the meeting, take your web browser over to www.w6jw.org and click on the word "announcements." (ARNewsline™)

**
BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

RADIO RECORDS: FIRST GM TO YU ON 136 KHX

Another new record has been set on 136 Kilohertz. This, as a ham in Scotland contacts his counterpart in Yugoslavia. Jeramy Boot, G4NJH, has more:

--

Simon Lewis, GM4PLM, completed the first Scotland to Yugoslavia LF contact on the 20th of April. At 2228 UTC on Sunday, Simon had a two-way contact

with Teo, YU7AR, on 137.7kHz.

Simon was using equipment left behind by David Bowman, G0MRF, when the UK 73kHz record was broken, as reported on GB2RS two weeks ago.

GM4PLM is currently the only known GM active on the 136kHz band and at present is using a 125-metre long wire antenna. He plans to improve the antenna system over the summer in preparation for trans-Atlantic tests next winter.

Jeramy Boot, G4NJH

--

After completeing the QSO, Lewis paused to thank G0MRF and G3GRO for their help, and for the donation of equipment to allow him to become active on the 136kHz band. (GB2RS)

**

ON THE AIR: SPECIAL EVENT - 58 YEARS SINCE WW-2

On the air, members of the Crimea Contest Club will activate special event station, EO58JM, from the Ukraine between May 5th to the 11th. Their operation is to celebrate the 58 years since World War II. QSL's via KG6AR. (OPDX)

**

ON THE AIR: CELEBRATING SIBERIA

And keep an ear out for special event stations using the call signs UE9OWQ and UE9ORQ to be active between May 10th to the 18th. This to celebrate the 10th anniversary of the Radio Prim Correspondence club in Siberia. The two stations are also expected to be on between June 28th to the 30th for the 110th anniversary of the capital city of Novosibirsk Siberia. For more details and on how to receive a special certificate, visit www.nsk.su/~rpc/eh.htm (OPDX)

**

ON THE AIR: THE OREGON QSO PARTY 2003

The 2003 Oregon QSO Party will take place on Saturday, May 10 beginning at 14:00 UTC. Sponsored by the Central Oregon DX Club, the object is to work stations in Oregon, and for Oregon stations to work the world. For full information select the Oregon QSO Party link on the Central Oregon DX Club web page at www.codxc.org (K2DI)

**

DX

In DX, CT1CPP is active as S92UN from Sao Tome and Principe for the next three months. Suggested frequencies are 14.270, 21.270 and 28. 470 MHz on SSB. QSL as directed on the air.

And thirteen members of the F6KOP club station will be active as TM7R from Groix Island through the 12th of May. The operation will be on the HF, VHF and UHF bands using CW, SSB, PSK 31, RTTY and Slow Scan TV.

Lastly, the visit by Bill Burton, T88BA, to the South-West Island of Palau, scheduled been postponed until next month, The reason: A lack of money for fueling the government ship that was to carry him. (DX via OPDX and GB2RS)

**

THAT FINAL ITEM: TALKING TO A NOT SO SILENT S.K.

And finally this week, have you ever talked with a Silent Key? Believe it or not we have. His name is Ray Ortgiesen, WF1B, and last week he was named as an honored Silent Key by the planners of this years Dayton Hamvention. But as you will hrear, Ray is very much alive, well and and delighting the honor:

--

Ortgiesen: "I'm enjoying it so far. Its been quite a gas to get phone calls and e-mail's from so many people concerned about my health."

--

Why is the not so Silent Key recieving all these health and welfare inquiries? Well, heres the story in a nut-shell.

Back in the 1980's, in the Neanderthal days of home computing, Ray wrote RTTY. This program soon became the leading contest software for computerized radio teletype. And last week the Dayton Hamvention decided to honor him by nameing him as one of a group of Silent Key Award recipients. But Ray as we already know, Ray is still very much among the living and his first chore was letting everyone know he was still here.

--

Ortgeisen: "Its been fun. I did send out some e-mails as soon as I found out that it was publicized. I sent out e-mails on the of the major reflectors grearting them from the other side and leetting them know that I was fine, and obviously there was a mistake made."

--

Mistake or not, Ray is now an official walking, talking and breathing Silent Key. So we asked him if he had any special wish for the future of the hobby:

--

Ortgeisen: "I hope with the coming of digital and especially computerization that we can keep people interested in radio."

--

And as to the award itself? WF1B, had these -- er -- parting words:

--

Ortgeisen: "Its nice to know that folks considered me for this award, and I am happier to know it being alive, than not ever having known this fact had I indeed been a Silent Key."

--

How the mistake nameing Ortgiesen as a Silent Key Award winner is not clear. But no matter. Ray says that he' kind of enjoying the honor of being this years Dayton Hamvention -- not so silent -- "Silent Key." (ARNewsline™)

>to define each and every one of them would be a never-ending task.

>CB has rules on power and distances authorized, but the FCC thinks it can
>dictate physics...It was foolish in the 1950s, and even more foolish today!

In the 1950s, the FCC's experience with "mass radio operators"
was primarily with amateur radio, and they expected the new
"CB" operators to be as respectful of rules and limitations as
the hams were at that time. The enforcement resources were
large enough then to take care of the small amount of violators
that did emerge in the 1960s. They could not foresee or
plan for the the roguishness of the violations and violators
(the "10-4 good buddy" crowd) which emerged in the 1970s.

By the mid-1970s (when I still had contacts at the ITU) it was
apparent that the rest of the world's radio regulators (an "old
friends' club" who knew each other from all the international
conferences they attended) resented the U S for foisting "C B
Radio" on the world's communications scene and failing to keep
a tight rein on the operators. Some of us guessed that they would
find a way to register their displeasure, and so it happened -
at some conference procedural vote (the details escape me now),
everyone else voted against the U S position - a signal, perhaps....

Remember that in those days most of the world's nations felt
that "the average citizen" had as much right to or need for
uncontrolled personal radio communications as they had for a
machine gun. I'm sure that there are many nations that still
have that attitude in spite of today's easy-to-come-by technology.

In article <3EB9E4EA.E208808@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>> It is required by LAW.
>> The FCC listens to ALL United States citizens.
>
>Accepting your input doesn't mean action to your liking will be
>forthcoming.

Not required. The point is not absolute acceptance, just that
the First Amendment of the United States Constitution is
still operating for all citizens of the United States.

You've heard of the United States Constitution?

Good.

I was afraid that you far-away galactic residents hadn't heard
about our insistence on Freedom and Rights in the United
States of America on Terra.

>> They aren't required to listen to extraterrestrials living in another
>> galaxy.
>
>I'll jot that down.

Always keep a pad and pencil handy, E.T., you might learn
something from us Terrans in our part of the galaxy.

>What in the world are you babbling about?

Do you need a Universal Translator? There are several available
surplus at Paramount Studios, Hollywood. Used in long-running
series of television shows involving space travel. Just the thing
for you, E.T.

>Maybe a change of scenery will do you good. Perhaps you can undertake
>self-appointed advocate status for another endeavor in which you are not
>a participant.

I like it here on Terra in the United States of America.

Here we can discuss laws of all kinds without "being participants."

We can all talk about felonies and misdemeanors without having
to commit such felonies or misdemeanors first.

I'm sorry that your far-away galactic society doesn't allow such
things.

>As has been pointed out to you a number of times, new amateurs
>absolutely cannot do as I did long ago. Under present licensing
>requirements, that is an impossibility.

Hmmm...the cognition assembly in my Universal Translator
seems to be malfunctioning. E.T. isn't translating well...

Perhaps E.T.'s society only communicates in on-off keying?

Their whole set of morals and ethics might be based on on-off
keying modes. That must be the cause of all the translation
problems.

>How so, Little Lenore? I didn't provide you an insincere wish.

E.T. definitely needs that Universal Translator! :-)

>Others cannot do as we did long ago.

True. "Spark" is outlawed in United States radio, all services.

>I think you're arrogant in your
>demands to change a radio service in which you are in no way involved,
>Little Lenore (Foghorn Lenhorn).

Tsk, tsk, tsk. How does changing a regulation on getting into
a licensed activity affect those who have already gotten in?

Oh, yes...it greatly affects the attitudes of those already
licensed...makes them less special and they cannot lord
their "superiority" over newcomers to a hobby. Understood.

>Just to be sure that I understand your
>position, we consider ourselves arrogant?

Absolutely. Positively. Without any trace of doubt.

Note: That's not an uncommon trait among some extra-
terrestrials...even delusions of godhood such as the
Goa'uld exhibit.

>I've received a revelation which tells me that you're a horse's ass.

Tsk, tsk, tsk.

It is difficult for us terrestrials to differentiate among the other
galactic societies. Some act like Borg, some act like Goa'uld,
and now some pretend to be human rednecks tawking tuff.

>This newsgroup isn't about professional radio.

It seems to be a forum where mighty macho morsemen
can tawk tuff and pretend to be superior because of their
singular skill in beeping.

>This newsgroup isn't about professional radio and you aren't involved in
>amateur radio in any capacity.

Not even by inductive reasoning. "Resistance" is futile.

E.T. has achieved resonance with a godlike status.

He plays in tune to the music of the spheres and superiors.

>> There is NO need to test for morsemanship for an amateur radio
>> license just to satisfy the selfish desires of ALREADY licensed
>> amateurs.
>
>That isn't WHY it is THERE.

Of course that is why the morse code test is there.

The godlike superiors must be satisfied. All must do as They
command. They are superior for They have said so.

>You have no law enforcement powers over amateur radio and you are not
>involved in any way with amateur radio, yet you demand CONTROL over who
>shall get into amateur radio and HOW they should do so. Now THAT is a
>perverse "control freak" condition.

BZZZT! Wrong, E.T.

Removal of an outdated requirement in regulations represents a
freedom from the existing control freaks.

The US civil radio regulating agency, the one that grants amateur
radio licenses, agrees that the morse code test serves no useful
purpose to them. That has been stated in public by them in 1990
and again in 1999.

>You're just wasting time--yours and ours.

E.T., call home...get funding for the Universal Translator purchase.

You are wasting everyone else's time mumbling about support
for your subsides-for-the-superiors.

>You're long in the talk department and more than a little shy in the
>action department. You are seventy and you haven't made a move toward
>obtaining a license.

Everyone can see you are in desperate need for that Universal
Translator, E.T.

I got my first FCC radio license in 1956, remember? :-)

Maybe in your civilization it is required to commit a felony in
order to establish laws against it. That's not a requirement here
on Terra. We can talk about the requirements of getting into a
radio hobby without first getting into it. Really.

Sorry, I've not been able to identify your species yet. Are you
Goa'uld or Borg or some other unidentified species object?

Beep, beep. Call home, E.T., get that purchase order approved.

That's a nice little Extra Terrestrial...

>work on a daily basis, as well as going to a local college for classes that
>is about 30 miles away. Back in those olden days, most places that a person
>needed to go to might have been only a three mile walk at best.

Yup.

Back in the 1870s, the Pennsylvania Railroad invented the idea of commuting out
here on Philadelphia's "Main Line". They bought up farmland along their
right-of-way, divided it up into building lots and sold them to well-to-do
businessmen who didn't want to live in the city anymore. PRR ran short,
frequent, fast trains to and from the city, and it became practical for at
least some of the population to live far from where they worked.

About that time or soon after, the PRR's main rival, the New York Central,
began doing the same thing in and around New York City. The Long Island Rail
Road (a PRR subsidiary) also got into the act.

In the decades that followed, New York City and Boston installed elevated
trains and subways, making it practical for almost everyone in those cities to
live far from where they worked. Other cities soon followed, with various forms
of trolley lines and interurbans. The automobile extended the process, but in
so doing helped create sprawl, congestion, pollution and long commutes.

Let's see - 12 miles per day at 3 miles per hour is 4 hours per day walking!

So competition means cult if they require the participants to follow the rules. Then that must mean the Olympics, pro football, state fair cooking contests, the Van Cliburn piano competition and every competition for anything in the world is a cult. If you do not follow the rules precisely in any competition of any sort, you will penalized or disqualified entirely. Considering competition a cult is very strange as one has the option not to compete. In cults, one has no option.

Competitions have rules so you can decide the winners. If you don't have rules, you can't determine winners or rankings. Without winners and rankings, you don't have a contest. It's an activity but not a competition.

I really should resist answering this troll but he's a lot more fun than Len Over 21.

No, I've been there. This is what the Hams did at the event I went to. It also fits what they are doing at Hamfests.

>Personally, I think you're making it up as you go to have the >appearance<
>of being factual.

No, I've been to field day. I've been to Hamfests. I've joined a random group of Hams recently. Hams have said the stuff I've mentioned.

From: "Dee D. Flint" deehays@qix.net

>So competition means cult if they require the participants to follow the
>rules.

Competition does not mean cult. The rules of this "contest" are cult like in nature. It requires you to "work" certain segments in certain ways for no apparent reason.

Also, he mentioned working some areas were "not proper". The contest rules do not forbid you from making EXTRA contacts, so why would certain contacts be not proper?

628. Re: The need to save the Novice Class license

Newsgroup: rec.radio.amateur.policy
Date: 2003-05-09 00:26:15 UTC
From: vshah101@aol.com

Source record: 66778

From K4YZ:

>Nothing must be followed "exactly" except as directed by the Federal
>Communications Commission.

Contests, while not FCC rules, should be followed exactly. The thing that makes it a cult is the arbitrary rules to "work" certain segments to collect points.

> I would not
>>recommend any EE join the hobby
> That's becasue you are narrow minded and selfish.

I honestly feel an EE would be frustrated with the hobby, like I was.

>>Changing the hobby for the better is a hopeless idea.
> That's only because you are hopelessly narrowminded.

Hams only want to do their activities. They will pose for a homebrewing photo, but never want to homebrew.

>> Do you know what you call contest operators who do NOT operate "through
>>the night", Vippy?
>
> The answer is....
>
> LOOSERS!

That's what you call contest operators that DO operate through the night.

>"Cult-like" in following rules?

As I explained, there is no apparent reason for these rules. The contest rules are defined in a strange way.

>>One of them "protested" by making contacts that were taken out of the
>>contest.
>>He then claimed he would submit these additional contacts as protest of the
>>contest removing those contacts.
>
> Contests have time limits and contact criteria...It is those criteria
>against which participants are judged.
>

Okay, but he made additional contacts and submitted them to the contest as some kind of "protest". He wanted these contacts to be allowed.

He seems to understand the hidden meanings behind the contest rules. I sure don't.

> In other words, it's cheating.

Having EXTRA contacts than the contest asks for is not cheating.

>>One of the children, replied "I can get my 10-10 at the same time".
>>Then, the adult said "You don't want to do that. Its not proper".
>
> Obviously someone was trying to teach the child the rules of the
>contest.

No, EXTRA contacts are allowed. You can contact anyone using legal modes. He said that it is improper to make "10-10" contacts. Apparently, "10-10" contacts are improper in the Ham traditions!

>>The same child told another child, he was "not good enough" since he did not
>>know CW yet. The other child said he is in the process of learning CW.
>
> I think this was a VippyLie thrown in to try and validate the
>preceeding.

No, the child really said that. It is possible that children sometimes say these "insensitive" things and did not really mean it.

>WHY would someone bring a CB radio book to an Amateur Radio operating
>event

CB is just another operating frequency. It is not something evil as is often implied at different Ham meetings.

>>Anti-social in that they kept at their station, when there were plenty of
>>other
>>activities.

Here they are, at their radios, while others are socializing.

>>>.Yet NO ONE
>>>has ANY idea as to what "clubs" they are supposed to be, because even
>people
>>>who live in his neighborhood don't know what the heck he's talking about.

Believe me, they exist. I cant come up with all this info without actually going to club meetings and Hamfests.

Those are major facets of ham radio. If that's not what you
want, find another hobby. If you want "socializing" join a dance
club where there are plenty of babes and let us hams do our hamming.

Steve,

Back in the '50s, radios that operated much over 30 MHz were expensive and (compared to today's radios) quite insensitive. 11 meters wasn't used much by amateurs and was the 'radio junk bin' of that era (what is it ... Industrial, Scientific, Medical ... or something like that?). We take our 440 HTs for granted as well as cell phones. Back in the 60s, a tiny 440 rig was likely an aluminum box in the form of a 6 inch or larger cube with a 1 tube super regenerative receiver/transmitter in it. I saw one. Good for 1/4 mile - assuming you could find someone else with a similar setup. I'm trying to remember what was a good front end. Too many years. 6AF4? I forget, but 4 dB noise figure was decent. No, back then 27 MHz probably made sense to the FCC. Whether it has made any sense after the 50s or not ... well, make that after the 60s. There was still very active enforcement during the 60s. After that, it has been all down hill :)

It had nothing to do with being efficient. The adult briefly gave some background info about the 10-10. The adult explained to me the 10-10 contacts were not desirable under any situation, contest or not. He did not want the child to try for that award.

Its improper because it did not fit the Ham traditions.

>things about the obese.

Mike is correct. I write disparaging things about the obese. Obesity
is a self-chosen, self-inflicted condition which causes untold human
misery is an expensive social burden -- and the main reason why it is a
growing social problem is because of the politically-correct attitude that
obese people are unable to control themselves for reasons that are no fault of
their own.

Personally, I'd love to sit in front of the TV and put away a half-gallon of
ice cream every night myself. But I don't, because I realize that this is
destructive behavior. Obese people are obese because they eat too much
of the wrong foods. Perhaps a couple of percent of them have some
legitimate physical condition that contributes to their being overweight.
Obesity is not a good thing and I, for one, don't sugar-coat it (pun intended).

> with your attitude.

Phil:

Only in the mind of someone who has forgotten what ham radio is supposed
to be about -- and has adopted the current New Age, politically-correct,
touchy-feely attitude that ham radio is all things to all people, and that we
get to pick and choose our level of knowledge and skill and still be considered
a full-fledged "Real Ham." The technically uninvolved "Public Service" types
are the exactly WRONG hams to be involved in Public Service. They are
the ones who will lose their ability to communicate the minute the strong,
full-quieting repeater goes down and their HT batteries go flat. If ALL the
repeaters in a 50-mile radius go down, which can happen in a large-scale
regional disaster, then what are they supposed to do? Stand around in their
International Day-Glo Orange jumpsuit with RACES and club patches and
look important? All I can say is, they'd better be damn good at looking
important!

I sorry if my attitude doesn't appeal to you. I'm just one of those
inconvenient,
politically-incorrect types who thinks radio amateurs need a full range of
technical and operational skills in order to be fully-capable emergency
communicators. Give the grandmother at the Walk-A-Thon an FRS HT
and she won't know the difference.

Ryan:

The cellphone is one heck of a lot more reliable for such "emergencies"
than an HT. If you own a cellphone but carry your HT instead of the cell,
then all you are doing is showing that you are a Ham Hero looking for a
piece of the action.

I own a cell phone but it is not activated. It is an old "bag phone" I bought
at a hamfest for $4.00, and I use it strictly for dialing 911 in case I
encounter
an "emergency" situation on the highway. I have owned it for several years,
and have used it exactly twice. Every now and then, I plug it in and dial
611 to verify it's operation by listening to the Verizon customer service
menu and occasionally talking to one of their support help people.

Ryan:

I appreciate your concern, but be assured that I am not the least bit
"bitter" about ANYTHING having to do with amateur radio. All I do
here is occasionally amuse myself by responding to postings by relating
some of my own thoughts and ideas. This newsgroup does not reflect
even ten percent of my involvement in ham radio. When I make comments
like the above, I am simply giving my opinion of certain types of hams I
have personally known, based on the behaviors I have personally
witnessed. A lot of hams get involved in Public Service as a way of
attaining some sort of personal validation -- glory, if you will. I guess
I'm just unlucky enough to have found that type more often than other
hams have. They have had the effect of turning me off to Public Service.
That is their fault, not mine.

As a tech, I assume you have a HT. Get on some of the repeaters and talk to people. You're in the Boston area IIRC. This meand you are blessed with one of the largest collections of technoweenies in the world nearby (MIT) Get on the air and start talking. You'll find the people you are looking for soon enough. And they will likely be glad to have you there.

Regardless of the activity, sport or whatever, the rules of any competition have no apparent reason for being. It's just the way to determine what are valid points and how those points are accumulated. Once the rules are set, you follow the rules exactly. That goes for everything from piano competitions to the Olympics.

>
> Also, he mentioned working some areas were "not proper". The contest rules
do

be not
> proper?
>

Depending on the particular contest, certain contacts will net you no points. So they are improper to tie up your time and the other guy's time on something that doesn't earn either of you any points. It is also rude to slow down a contester by asking for non-contest information such as say 10-10 numbers when the contester is trying to run a pile up quickly and efficiently. So that would also be improper, i.e. distracting the competitor.

Ahh, yes the old obesity as a moral/mental defect. Lots more to it than
that. I have to (willingly) participate in strenuous sports activities
and watch every calorie I eat just to stay somewhere on the heavy end of
normalcy -large frame Muscular- but a months lapse pushes me over the
edge. Yet my wife, who lives on a diet of Nachos with the works, has
never carried over 115 lbs on her 6 foot frame.

People should not be obese. But sanctimony only provees the prejudice
of the sanctimonious.

Wrong. Either the adult bungled the situation, did not know any better himself or you misunderstood his explanation. Collecting 10-10 numbers is one of the many (and optional) time honored ham traditions.

Amateur radio DX contesting is called "radiosport."

"Sport" involves athletic activity.

A number of older men sitting alone at their radios for hours on end doing nothing but listening and twitching fingers of one hand is NOT any sort of athletic activity.

Amateur radio DX contesting is nothing but a GAME.

>I really should resist answering this troll but he's a lot more fun than Len >Over 21.

I don't think you can stand the open competition of newsgroup discussion, Dee. I would suggest that you give serious thought to stopping access this newsgroup. It isn't a woman's syncophantic ARRL auxilliary site.

Here's some harsh reality for you Len: I don't know any hams who care a whit what modes other services use. Morse is in widespread use in amateur radio whether you like it or not.

> One person operating a radio alone is the usual picture of being
> "in the shack."

That'd be much like one lone soul sitting along while drafting his newsgroup posts.

> CW operators have absolutely no human-sense clue to another
> distant operator except through the monotonic aperiodic tones
> in their ears. No other audible clues, no voice tones, inflections,

Hmmmm. Much like newsgroup posters with only the clicking of their keyboards and no audible clues. Morse is used as a real time mode though. This isn't.

> That sort of aloneness allows them a great deal of time to spend
> imagining things about the CW distant operator...as well as
> imagining things about themselves. The distant operator could

Again, just like newsgroup posters. One former poster here even attempted to play the part of both genders. There was no way to tell from his posts until he felt compelled to tell us.

> A very limited context, but they survive and that is the basic
> motivation of all humans.

Are you in the gene pool, Len?

Right here in Mid-Michigan Larry! Actually, we are trying now, after alot of prodding, on working together to get a "network" going again in District 3 region of the lower peninsula of Michigan (eastern region) so that either plain old routine or "pleasure" messages as well as public service and/or emergency traffic can be sent throughout the region.

In fact, I operate mobile packet exclusively. An older laptop, a 166mhz machine, with packet modem and it's off I go. (No, I don't drive down the road and type!! :)

I haven't seen whatever is at the link, but in regards to the car listed below, I would almost consider getting something like that as well, merely from a miles-per-gallon standpoint. Criminy sakes..... my stupid truck gets 15mpg if I am lucky and a good tail wind behind me!

> One wonders if E.T. knows anything about the US Air Force.

Who is E.T.? I knew enough to tell you that the Air Force uses the term
"AFSC". That's only a couple of things which I knew about the military
that you didn't know. There are others.

> >> Could he do morse code?
> >
> >Could you?
>
> Yes.

It has not been demonstrated.

> >See you're an awfully lot like Old Blood and Guts.

They do? That's assinine. Obviously you participated and have yet to
stop.

> How are we supposed to treat the vaporous implications
> of meritorious service done by snack bar box pushers?

I didn't know any snack bar box pushers. Must have been some rear area
slang from the days when you won the Korean War from Tokyo.

> not forbid you from making EXTRA contacts, so why would certain contacts be not
> proper?

If they waste time which one could be using to work other stations for
contest points, they are not proper within the timeframe of the contest.
Contest rules don't forbid you from taking time to watch a movie or from
sleeping half of the contest period away. You wouldn't expect to be
competitive and do either of those things.

You find the contest rules arbitrary? Don't operate in the contest.
You must not tire of being one of the newsgroup buffoons.

> I honestly feel an EE would be frustrated with the hobby, like I was.

N2EY is a EE. He isn't frustrated with amateur radio. Jim Jaeger K8RQ
is a EE who founded Cincinnati Microwave. He isn't frustrated with
amateur radio.

> >>Changing the hobby for the better is a hopeless idea.
> > That's only because you are hopelessly narrowminded.

That's simply an untruth. Do you know what a person who tells untruths
is called?

> As I explained, there is no apparent reason for these rules. The contest rules
> are defined in a strange way.

So everything you don't understand has no apparent reason for being.
Anything you don't understand becomes "cult like". Take my advice,
Vipul: Stay away from VFW and Shriners conventions.

> Okay, but he made additional contacts and submitted them to the contest as some
> kind of "protest". He wanted these contacts to be allowed.

That's simple stupidity on his part.

> He seems to understand the hidden meanings behind the contest rules. I sure
> don't.

It is painfully obvious.

> Here they are, at their radios, while others are socializing.

Sure. There are those Whitbread Cup entrants out on the boat while others are socializing. There is a time for competition and a time for socializing. You don't see marathon runners stopping to chat with those in the crowd.

From K4YZ:

>>Nothing must be followed "exactly" except as directed by the Federal
>>Communications Commission.

>Contests, while not FCC rules, should be followed exactly. The thing that
makes
>it a cult is the arbitrary rules to "work" certain segments to collect points.

WHAT A FREAKIN', NARROWMINDED, IGNORANT IDIOT!

Just HOW do you suggest that those "rules" be set up in order to allow
points to be obtained, Vipidiot? By seeing who can get the lowest SWR? To see
who can "keydown" the most "swing" (you ARE a CBers, Vippy...)

These rules are NOT "arbitrary". The more popular contests have been
around for decades, and with evry passing of the "tests", changes are made
primarily on the input of the contesters themselves.

You do not know this since you refuse to do anything except whine and wail
about how Morse Code is holding you down.

>>> I would not
>>>recommend any EE join the hobby

>> That's becasue you are narrow minded and selfish.

>I honestly feel an EE would be frustrated with the hobby, like I was.

That's because you are narrowminded and selfish.

>>>Changing the hobby for the better is a hopeless idea.
>> That's only because you are hopelessly narrowminded.

>Hams only want to do their activities. They will pose for a homebrewing photo,
>but never want to homebrew.

That's because they want to tick you off. The KNEW you'd be watching.

>>>Do you know what you call contest operators who do NOT operate "through
>>>the night", Vippy?
>
>> The answer is....
>>

> LOOSERS!

>That's what you call contest operators that DO operate through the night.

Some of Amatuer Radio's most prolific contesters are in your back yard,
Vipidiot...Perhaps I will pass your ranting around and let them know how "one
of the locals" feels about them...

>>"Cult-like" in following rules?

>As I explained, there is no apparent reason for these rules. The contest rules
>are defined in a strange way.

You've "explained" nothing.

The rules are set up to try and give every reasonably determined contester
a chance at scoring well. Without the establishment of rules and goals, thre
is nothing to "compete" for.

>>>One of them "protested" by making contacts that were taken out of the
>>>contest.
>>>He then claimed he would submit these additional contacts as protest of the
>>>contest removing those contacts.
>
>> Contests have time limits and contact criteria...It is those criteria
>>against which participants are judged.

>Okay, but he made additional contacts and submitted them to the contest as
some
>kind of "protest". He wanted these contacts to be allowed.

If he made the contacts outside the parameters of that contests rules,
then he will LOSE points. Almost every contest has a "penalty" for "illegal"
or improper contacts or poor sportsman like conduct on the air.

>He seems to understand the hidden meanings behind the contest rules. I sure
>don't.

There are no "hidden meanings" behind the rules. They are there in black
and white for all to see and assimilate..

YOU don't understand the rules because you are a fool.

>> In other words, it's cheating.

>Having EXTRA contacts than the contest asks for is not cheating.

It certainly is if you acquire improper contacts and then attempt to submit
them for credit!

>>>One of the children, replied "I can get my 10-10 at the same time".
>>>Then, the adult said "You don't want to do that. Its not proper".
>
>> Obviously someone was trying to teach the child the rules of the
>>contest.

>No, EXTRA contacts are allowed. You can contact anyone using legal modes. He
>said that it is improper to make "10-10" contacts. Apparently, "10-10"
contacts
>are improper in the Ham traditions!

WHAT contest, Vippy?

If you interrupt a fellow who is trying to work a contest just to get a
10-10 numbeer and at least don't throw the guy a contest point, you DESERVE to
get scolded. Some of these contest groups work for months to prepare for these
events, and to ahve to stop thier routine to do something other than what the
plan calls for is annoying.

>>>The same child told another child, he was "not good enough" since he did not
>>>know CW yet. The other child said he is in the process of learning CW.
>
>> I think this was a VippyLie thrown in to try and validate the
>>preceeding.

>No, the child really said that. It is possible that children sometimes say
>these "insensitive" things and did not really mean it.

I think it was a VippyLie thrown in to try and validate the preceeding.

>>WHY would someone bring a CB radio book to an Amateur Radio operating
>>event

>CB is just another operating frequency. It is not something evil as is often
>implied at different Ham meetings.

No, it is NOT "just another operating frequency". It's an entirely
different radio service, with different rules, basis and purpose. CB rules,
regulations, and operating techniqes haev absolutely NOTHING to do with Amateur
Radio.

NOTHING.

>>>Anti-social in that they kept at their station, when there were plenty of
>>>other
>>>activities.

>Here they are, at their radios, while others are socializing.

Uh huh.

>>>.Yet NO ONE
>>>has ANY idea as to what "clubs" they are supposed to be, because even
>people
>>>who live in his neighborhood don't know what the heck he's talking about.

>Believe me, they exist. I cant come up with all this info without actually
>going to club meetings and Hamfests.

Come up with WHAT "info", Vipul?

You've not cited ONE piece of verifyable "evidence" to anyone in this forum. You say you've been to "hamfests" in "other states", yet you never cite those events, times, etc.

What you are doing is lying. You are making up stories in order to try and vindicate yourself. It's not working. You are digging yourself an ever deepeining hole of mistruths, stories and blatant lies that even you ae starting to have a hard time keeping track of.

Then whatever the General Class has to offer you, Vippy, is worthless. If
you upgrade AFTER code is taken away, it will be no les than what it is, ergo
you wasted time waiting on it.

Only if you want the contacts to count for points in the contest.

> > The thing that makes it a cult is the arbitrary rules to "work"
> > certain segments to collect points.

Weirdest definition of a "cult" I've ever seen.

Sounds like Vipul belongs to a cult that assigns strange new
definitions to things.
>
> You find the contest rules arbitrary? Don't operate in the contest.

Exactly!
>
> > I honestly feel an EE would be frustrated with the hobby, like I was.
>
> N2EY is a EE. He isn't frustrated with amateur radio.

And I've been interested in amateur radio since about 1965 (which is
when I found out what it was), licensed since 1967, and an EE since
1976.

> Jim Jaeger K8RQ
> is a EE who founded Cincinnati Microwave. He isn't frustrated with
> amateur radio.
>
Cecil, W5DXP, formerly W6RCA and some other calls, is an EE who worked
for Intel (and several other companies). I don't think he is
frustrated with
amateur radio.

In previous postings Vipul has expressed his frustration with EE, too.

> > >>Changing the hobby for the better is a hopeless idea.

All depends on what you mean by "for the better". If you think large
numbers of American hams are going to homebrew complex, time

consuming, expensive projects when they can buy equivalent
manufactured or kit equipment, forget it.

> > > That's only because you are hopelessly narrowminded.
> >
> > Hams only want to do their activities.

PEOPLE only want to do their activities.

> > They will pose for a homebrewing photo,
> > but never want to homebrew.

Makes me wonder who built all that homebrew stuff in my basement, my
attic, various storage spaces folks are letting me use.......

One word: Golf. A big part of that game is the rules and the process
that decides them.

> > Okay, but he made additional contacts and submitted them to the contest as > > some
kind of "protest". He wanted these contacts to be allowed.

HAW! Been there, done that, a marathon runner saves ever bit of time
and energy for the race.

Seems to me that there's a certain mindset that cannot grasp the
concept of sports and games, and the rules needed to make them go.

Actually, one can meet some pretty hot babes at places like
roller rinks, not that you would take them home to meet mommy,
but... I find most hams, like the self-appointed "experts" found
in this forum, would be scared off by the likes of strong willed
women who join roller skating teams. I dated one roller skating
babe for over a year and never had to worry about big mouth
guys in bars. She kicked ass and took names later. Sort of like
the big mouth "experts" in this forum, except here they hide behind
key boards and microphones and spin stories of yesteryear on how
great I was and how many important people I knew. Hams are
big name droppers you know! Hmmm, maybe I'll give Angie
a call tonight and see if she wants to go up to Dayton with me.
It'd be fun to watch pee will hams make passes at her, only to
get a left to the chops, just above the pencil protector and to the

right of the clip-on microphone.

684. Q's in regards to testing

Newsgroup: rec.radio.amateur.policy
Date: 2003-05-09 14:01:01 UTC
From: cmoressi@cs.uiowa.edu
Message-ID: <df510dbe.0305090601.78480fe5@posting.google.com>
Source record: 66730

Hello,

I have a couple questions.

Is it possible to directly take the extra examination without having to take any of the subsequent examination elements?

I've looked at the theory part of the exam, and everything looks straightforward. However I need to learn Morse code. I was wondering, perhaps, if people can tell me how they went about learning Morse mode.

Thank you,

-Chris

Chris -- from the W5YI Site http://www.w5yi.org/AmRadio.htm#EXTRA

Quote: Amateur Extra Operator Class license:In addition to Element 1 (the 5 wpm Morse code test), Element 2 (Technician written test) and Element 3 (General written test), you will have to pass another 50 question multiple choice examination (called Element 4). The minimum passing score is 37 questions answered correctly. There are 665 possible questions in the Extra Class question pool. Again they are all known and are contained in our study material. End Quote

For how folks learn Morse code -- See URL:

http://ac6v.com/morseaids.htm#Learn

Good Luck

Anon73

One time is "mistaken". After numerous corrections, another word
applies.

> > So everything you don't understand has no apparent reason for being.

It's a yearly world class sailing race. Europeans, South Africans,
Australians and New Zealanders are passionate over the race.

Think of all the socializing you're missing :)

> Seems to me that there's a certain mindset that cannot grasp the
> concept of sports and games, and the rules needed to make them go.

Careful! You'll arouse Leonard's ire. According to him, there's an ocean of difference between sport and games.

If you're through name dropping about the roller derby queens you know, want to clue us in on what is a "pee will ham"?

For the record, I'm not afraid of a woman who drinks beer from the bottle, has tattoos and who fist fights men. I just wouldn't want to go out with one.

I'm glad I wasn't the only one.

Of course with SH gone from power, most of the reason for those forces
to be in SA vanishes.

Which raises some interesting questions: Where is SH and where is OBL?
If they were "in custody", do you think that info would be made
public?

You have to have taken and passed the technician and general theory
exams and the 5wpm exam before taking the extra theory exam, if I
recall correctly.

Chris> I've looked at the theory part of the exam, and everything
Chris> looks straightforward. However I need to learn Morse code. I
Chris> was wondering, perhaps, if people can tell me how they went
Chris> about learning Morse mode.

I'm comfortable with writing small computer programs, so my approach
was to build a tool to help me.

First, I did some research and determined that the Koch method was the
one most likely to work for me. I then found an old old C program on
the net called "tomorse" which converted text strings to an audio
file. I rewrote tomorse to use libsndfile and to sound a little
better, then wrote a perl script to feed tomorse characters in the
Koch method, then wrote a shell script to build multiple audio files
(2-a.wav, 2-b.wav, 3-a.wav, 3-b.wav, 4-a.wav, 4-b.wav -- two files
each for two, three, and four characters) and corresponding text
files.

I burn those .wav files to a CDRW and stick it in my portable CD
player so I can listen while I'm on the commute or when work gets
slow. I compare my notes to the corresponding text files. When I get
90% accuracy or more, I move up a level.

I'm actually doing very well with this system. I'm currently doing it
the lame and easy way with 20wpm characters and 5wpm spacing, but once
I get all the characters, I'll tighten the spacing up to 13wpm spacing
and start again.

One of these days I will make a web page with my stuff for people to
download. However, I've supplied enough information for you to be
able to solve the problem yourself if you're inclined. If you want
the programs and scripts, send me email.

Chris> Thank you,
```

Best of luck!

Sounds like you can dish it out but you can't take it, Len ;-)

Do you think your behavior here causes others to respect you? Here's a hint: IT DOESN'T.

> 5. The Stalker tried to manufacture some kind of "case" of
> "cowardice" about my US Army Signal Corps duties and
> location, repeatedly refering to my military occupation
> specialty as "rear area radio clerk."

Did he use the word cowardice?

> He continued to do so
> despite my pointing out what they really were, explicit
> details of duties and responsibility which were not only
> referencible through government archives but were witnessed
> by a still-living radio amateur who was assigned to the same
> unit and military radio station and who did the same duty.

We all know what you did in Japan, Len. You've told us many, many, MANY times.

I do remember you mentioning the message totals for ADA in a way that could be mistaken to imply that you did it all by yourself. Shall I get that one from Google? ;-)

> The Stalker has not made any explicit details of his own
> military service and "battle experience/heroism" other than
> the vague generality of "seven hostile actions."

Some folks do, some folks don't.

The way you have described your military service could give some people the wrong impression, Len. I recall a bunch of postings about being Bear bombers and how close you were to Korea, etc.

More important, you don't show much respect towards other veterans who served if those veterans disagree with you on other issues. Interesting.

Here's a classic example.

(The following is edited for length. All of the following quoted words are Len's. See GOOGLE for the entire posting)

Message-ID: <20000328122107.02129.00001001@nso-fp.aol.com>

That's all very nice and dramatic but this was the United States Coast Guard, right? The same USCG that gave you food, lodging, shelter, and free clothes that you could wet in as needed? The same USCG that taught you morse code cognition? It wasn't

amateur radio, was it?

Jeff, the time for demanding Medals for Meritorious Service in the USCG is past for you. That was not amateur radio, it was PROFESSIONAL radio. You were paid for what you did (in several ways). It was your JOB. I'm sure that the USCG did not put you on watch if you couldn't cut it. I don't see how all that makes you some Number One Ichiban HAM Honcho NOW.

Transmitters don't "scream" Jeff. They are inanimate things that run on electricity. When the radio room on that unfortunate ship flooded, many things could have temporarily put the transmitter on full Continuous Wave and also to shift frequency slightly. The "scream" you heard, if it was not in your head alone, could have been a true CW with a frequency shift just enough to make it sound something like a "scream."

You were safe on shore, listening to a radio...provided by the USCG, the same military service that provided you with food, lodging, shelter, clothes (to wet in), and a modest monetary stipend each month for your JOB. I'll bet you even got Rank with that USCG service.

...you knew the job was dangerous when you took it...

As I said, the time for Medals For Meritorious Radio Service in the USCG is past for you, Jeff. You were safe on shore, no lifeboats needed, and, when your watch was over, you could go off duty, hit the bunk, or chow down on USCG food after changing your pants.

Thank you Superham, once more you've saved Metropolis.

Of course, if you want some "comparisons," you can always hang around a TRACON sometime at a busy Center if radio "marathons" are your cuppa. Plenty "runners" in that radio "marathon," a whole room full plus lots in the sky, all doing things on voice. If there be "screams," then they can be heard on cockpit voice recorders.

Jeff, you've never been under Incoming, have you? While trying to get return artillery support on a radio while your ears, your whole body is numbed by HE infall on your

position? Most folks in that position don't wet their
pants...every sphincter tightens up, ears go deaf, eyes
close tight, and every breath may be the last.

Why don't you quit the shore station histrionics and go
back to ancient radio history. It will ease your troubled
mind...and keep your pants dry.

Len Anderson
ex-RA16408336

END GOOGLE QUOTE

Gee, Len, you really showed another veteran some respect, huh? And
that was in a thread where you weren't even being addressed.

That part about the s*******s makes that post both memorable and easy
to find.

Have you ever been "under incoming", Len? Not in training - the real
thing. I haven't. Have you?

> 6. In my 14 pages of text on my Reply to Comments (of another)
> on FCC NPRM 98-143 (received and made public record on
> 13 January 1999), Robeson sent a single paragraph (on the
> public record of 25 January 1999, past the stated cut-off date)
> that I should be deprived of any consideration on Restructuring.

So? Isn't that his right under the First Amendment?

Your 14 pages were classified by the FCC as REPLY COMMENTS. Most of
those REPLY COMMENTS consisted of you telling the FCC to disregard the
comments of one Michael P, Deignan.

Why is it OK for you to tell the FCC to disregard another's comments,
but not OK for someone to tell the FCC to disregard yours?

> In essence, he was so enraged by newsgroup messaging on
> the code test issue that he had to carry this to an extreme.

How? All he did was express an opinion to the FCC. Is that wrong?

You sent your 14 pages to the FCC so late that there was no way anyone
could reply before the January 15 deadline.

> Such an action was little more than more bullying tactics
> that would have deprived a US citizen and military veteran of
> exercising his Constitutional Rights (First Amendment to the
> US Constitution).

BULLSHIT.

There's just no other word for it, Len.
>

> > "Pedantic Parson"..."Herr Oberst"...."Jackbooted thug"..."elitist
> >Morsemen"..."Dill Sergeant"...All various "nicknames" bestowed on licensed
> >Radio Amateurs who happen to disagree with Lennie.

> Only after those same individuals used similar nicknames, false
> accusations, and personal insults to me FIRST.

Really? OK, show me where I have called you nicknames, made false accusations or made personal insults to you FIRST.

C'mon, Len, you made the claim, you back it up. Show us the actual postings.

You may find a "Lennie" or "LHA" back a few years, but that's about it. As for "false accusations", you won't find any of those. As for personal insults, you sure seem to take any sort of disagreement as a personal insult.

Find 'em and show 'em, Len. Can you? I think not.

The 55 MPH speed limit probably made CB popular. Truckers
talking to each other to identify speed traps. With their managers
pushing for higher "productivity", i.e., stuff delivered faster, they
had little choice. And nobody wanted to be easily traced, so
nobody bothered with licenses. Then the song "Convoy" came
out the fall of 1975, and many people got on CB. Then people
noticed DX (when the sunspots were in) and found it fun to
do the DX. This essentially exploded overnight and the FCC
was overwhelmed, and eventually said screw it and didn't worry
about violations not involving non type accepted equipment.

I had a CB license KAAR5167 back in 1976, then "upgraded"
to ham radio in August 76 "WA2ISE".

People who say 2m or some other band is just like CB ought to
listen to the 27MHz CB band sometime....

>> Hmmm...the Borg are back...
>
>Nope. They were bought out by a motion picture studio and are now known
>as Borg-Warner.

Incorrect.

Warner Brothers studio facilities (and Warner "Ranch Facilities"
outdoor location) are south down Hollywood Way from my house,
in Burbank. Hollywood Way is a major north-south thoroughfare
in the east end of San Fernando Valley.

Paramount Pictures owns the rights to "Star Trek" (and the
alien characters known as "the Borg"). Paramount Pictures
is farther south, over the Santa Monica Mountains, in the Los
Angeles area known as Hollywood.

"Borg-Warner" is a separate entity not involved with either show
business or fictitious aliens or amateur radio or attempts at
humor by baby-talking old men with control-freak obsessions.

Citizens Band Radio Service in the USA started in UHF in the 1950s,
not first in the former 11m ham band. "Class A" and "Class B" CB
were in what is now the 460 MHz PLMRS band. "Class C" (radio
control) and "Class D" (voice) at 11m were authorized later, in 1958.

The major problems facing any UHF or higher user of radio in the
1950s was CO$T and the limitations of vacuum tubes. Class B
CB equipment was limited to the superregen-receiver/modulated-
oscillator single-tube RF stage design tried in the 1930s. (the
6AF4 tube type mention sounds very familiar, heh heh) As far as
I recall, there was only one such low-cost Class B UHF trans-
ceiver design manufactured in the USA at the time. I used one
briefly, including adding a Yagi in place of the supplied drooping
groundplane wire antenna. Not very good beyond about 4 miles
range with a Yagi, otherwise only a half-mile with supplied
groundplane. About a cubic foot in size, real leather handle on
top (which rotted quickly in storage), built-in speaker and cheap
microphone, all RF connectors some non-standard press-fit
variety.

Commercial radios for 460 MHz Class A CB were few and far
between in the 1950s...and quite expensive...crystal controlled
FM or PM output with many multiplier stages between crystal
oscillator and final...tubes were too close to the limitation of
electronic transit time (much slower than light speed travel of
electrons from cathode to anode). The highest frequency triodes
were of the lighthouse structure with an absolute limit of about
2.5 GHz (GE type 2C39, an "inverted lighthouse"). The micro-

wave region required klystrons, magnetrons, and that brand-new (then) thing called a Traveling Wave Tube, the only true broadband vacuum tube for lower microwave regions.

Only commercial and government users could afford transmitting equipment at UHF in the 1950s. "Consumer electronics" at UHF was largely limited to UHF TV converters for the (then) brand-new US TV channels beginning at 14. Land Mobile radios of the 1950s stabilized in VHF at 160 MHz tops in frequency. Those had the advantage of history of many WW2 military radios at VHF using vacuum tubes (10-channel "tank radios", TRC-1 radio relay Rx-Tx separates, all crystal controlled and FM-PM). Civil airways radios on 108-136 MHz went to AM internationally, but those seldom needed more than 50 W RF output, even in ground stations. The practical limit using vacuum tubes seems to have been the military aviation band of 225-400 MHz and the generic AN/ARC-27 in use for decades in the US afterwards.

While transistors were in production in the 1950s, it took nearly the whole decade to get reliable, useable transistor junctions capable of reasonably-efficient operation above VHF. The venerable US military manpack VHF transceiver, AN/PRC-25, had transistors everywhere inside except the final amplifier, a tube. The PRC-77 follow-on which appeared in Vietnam later years, was essentially a PRC-25 with the final amplifier a transistor. About a hundred thousand (give or take) of that basic family were made and used for two decades by other militaries besides the USA.

The first handheld transceivers (semiconductors almost a necessity in structure) began appearing for commercial and local government work in the late 1950s...limited to the lower half of VHF, single-channel fixed-tuned FM PTT...and those proliferated in non-amateur HT applications in the 1960s. All solid-state vehicular VHF radios were right alongside the HTs in use and growth. While their USE is different than in amateur radio, the internals are generic to any application; difference was mainly in controls, external lables, and who sold them. Many Southern California amateurs were busy acquiring "surplus" commercial-government VHF radios in and about 1970 for relatively simple conversion to ham radios.

UHF business and government bands opened in the 1960s-1970s were as a result of demand now that solid-state radios could be designed and made profitably on up to 500 MHz. The old Class A and Class B Citizens Band bands were quietly dropped, relatively unused, all in favor of many, many more commercial-government users wanting that bandspace.

By about 1980 the design labs showed that semicoductors could work well in the 900 to 1200 MHz region and the push to cellular telephone systems began. Throughout the 1980s UHF radio design, coupled with advances in Information and Coding Theory, and growth in transistor manufacture took a virtual multiple quantum leap progress over previous, lower frequency radio. By the year 2002 there were over 300 MILLION handheld cellular telephones designed, made, and used...all operating at multiple crystal-controlled UHF in low L-band. At the end of 2002 the US Census Bureau said that one in three Americans had cellular telephone subscriptions.

Radio service applications above 1 GHz proliferated in the 1990s for both convenience, networking, or security. Keyless auto lock systems using UHF quietly arrived, the entire unit the size of a key chain fob. The "ISM" bands multiplied to include 2.4 GHz, then twice that frequency by the end of the 1990s. Off-shore manufacturing of US designs made millions of various UHF and microwave region devices available to the average consumer. Cordless telephone sets at 2.4 GHz now offer extremely good security from RF eavesdropping compared to the 49 MHz cordless units of three decades past...even while working in the same band as other, close-by 2.4 GHz cordless phones of the same design.

The point of this long missive emphasizing frequency is that progress in design, innovation, invention is due to thousands upon thousands of people in commercial (and some academic) organizations working to advance states of the art in communications all over the world. Those who only operate front panel controls cannot possibly know the explosive growth of radio communications technology in just a half century. RF upper frequency limits were reached, overcome, supplanted by new ways to do things many times over. What was barely do-able in 1950 was long-accomplished fact by 2000.

Right now laboratories are pushing transistor design up into X-band frequencies and beyond. Ultra-wideband radio regulations are being worked on at the FCC. The software-derived radios have already arrived. Some radio amateurs who know what is good for everyone demand that all amateurs test to the standards and practices of the 1930s in radio.

>starting to have a hard time keeping track of.

Tsk, tsk, tsk.

Steamy is holding up a mirror and forgetting he is looking at the
reflecting surface, seeing himself. That has been evidenciary
in here for at least 4 years spanning many claimed activities
and experiences.

For example, Robeson makes remarks as if he has first-hand
knowledge of electronic engineering. In actual fact he never
worked a day in his life IN any engineering activity, never had
any engineering responsibility. He was only a purchasing agent
in a corporation for less than a year.

Robeson has attempted to denigrate others' radio communication
experience outside of amateur radio, especially so in the military.
Never once did he state anything showing the Robeson DID do
any military radio communications. All of Robeson's claims have
been vague, generalized implications outside of amateur radio.

Mind rot is spreading among the Extra Terrifics in here...

>Vipul: Stay away from VFW and Shriners conventions.

What do "VFW and Shriners conventions" have to do with
amateur radio or saving the Novice Class license?

Heil's continuing confusion adds more credence to mounting
evidence of his mind rot.

He goes into more such confusion on mentions of "Whitbread
Cup entrants" (whatever they are) and "marathon runners,"
neither of which have anything to do with radio per se, let
alone amateur radio or the Novice Class license for same in
the USA.

Heil should seek some mental therapy. If not for himself,
then for all the readers in here...

Yes. Quite amusing sometimes...all the militay [sic] heroes
knowing all about military communications when they've not
stated anything about such...all the militay [sic] heroes
bragging about how they were "in" a country at war, therefore
connecting them to "fighting action."

The famous claim of another comes to mind..."seven hostile
actions" [sick] without a single one identified as to either time
or place or military unit.

Then there's this "communications expert" serving with the
State Department who revolutionized HF operations in a tiny
country in the middle of Africa back in the 1980s.

>Do they? I know some Spanish and French speaking individuals who give
>feminine names to some objects and masculine names to others. Maybe
>they've not heard of your theory.

Is that anything like calling another "Leona" or "Leonid?" :-)

Perhaps you should restrict your socializing to those Spanish
and French speaking individuals who exhibit gender confusion.

I cannot change or "fabricate" anything on the Google archives.

Are you another one of the Archair Radiotelegraphy Society
who lives in past postings archived in Google?

>> I can't change contents of the Google site.
>
>Yeah, that's one of the best things about it.

Make up your mind. First you say I "fabricated" things on
Google then you say "one of the best things about it" being
an inability to change anything on Google.

Your differing personalities are arguing among themselves.

>Who is E.T.? I wasn't in the Army. That's why I asked you the
>question.

You are, Galactic Traveler.

Don't misdirect with meaningless questions.

>> He doesn't know much about the Navy.
>
>He knew enough to tell you that the Navy uses the term "rates".

If you were never in the USN, how can you be such an expert
on USN terminology? :-)

>> One wonders if E.T. knows anything about the US Air Force.
>
>Who is E.T.? I knew enough to tell you that the Air Force uses the term
>"AFSC". That's only a couple of things which I knew about the military
>that you didn't know. There are others.

You may be suffering from battle fatigue after being IN a country
at war 30 years ago. Or just plain mind rot. Hard to tell...

>> >> Could he do morse code?
>> >
>> >Could you?
>>
>> Yes.
>
>It has not been demonstrated.

Neither has your heroic military action IN a country at war.

>> Did E.T. know General George Patton?
>
>Who is E.T.? I knew Patton about as well as you. I've seen the movie,
>viewed documentaries, read books.

You failed to answer questions such as "did Patton have a ham
license."

Why do you misdirect with all those MILITAY [sic] questions?

The Subject line in the message header says "Novice Class
license." It isn't about MILITAY or military history.

>> Where and when? Patton died well before the Southeast Asia
>> Live Fire Exercise.
>
>...and well before Korea. He wouldn't have directed his operations from
>Japan so you still wouldn't have run into him.

I was assigned to do military radio communications while on US Army
duty in Japan, 1953 to 1956.

Extra Terrific hasn't said squat about doing any radio communications
while he was IN Vietnam. Nothing.

>> >> Tell us about your Novice Class amateur radio experiences in
>> >> Vietnam, mighty morse warrior. Did you "hone your skills" there?
>> >
>> >I was a Novice seven years before my arrival in Viet Nam at age 21.
>>

>stop.

You DO exhibit mental problems on comprehension of what
the US military does today as well as centuries past.

What is NOT "obvious" to anyone in here on what EXACTLY
Mr. Extra Terrific did in Vietnam.

>> How are we supposed to treat the vaporous implications
>> of meritorious service done by snack bar box pushers?
>
>I didn't know any snack bar box pushers. Must have been some rear area
>slang from the days when you won the Korean War from Tokyo.

The Korean War NEVER ENDED. There was no "winning" or
"losing," no "victory" or "defeat." The 38th Parallel remains as a
dividing line between North and South Koreas, as it has been
for over half a century.

I am shocked that a former employee of the US Department of
State is so ignorant of past history of United States and United
Nations involvement in Asia. It was in all the newspapers...

Such total ignorance is not any sort of virtue.

Combined with vague, ambiguous claims of being IN a country
at war yet never detailing anything in that regard, that makes
such claims appear false.

It seems that nothing of Mr. Extra Terrific's confused postings
has anything to do with amateur radio and certainly not about any

Novice Class amateur license.

I put Mr. Extra Terrific into the mind rot victim category.

Get well soon.

My wife does not drink beer from a bottle or otherwise, does
not have tattoos, and does not fist fight men. She's a rather
good looking "mild mannered" lady who takes pride in her 60
year old's figure which many 30 year olds would die for. But
she's held her own with the loudmouth louts while working in
the heavy construction industry for over 30 years and I would
advise anyone to never start anything unpleasant with her. I've
seen her "in action" just once - "protecting me" she said - and
it wasn't pleasant for the other guy.

SB QST @ ARL $ARLB033
ARLB033 FCC Declares General Communications Emergency for Oklahoma
Area

ZCZC AG33
QST de W1AW
ARRL Bulletin 33 ARLB033
From ARRL Headquarters
Newington CT May 9, 2003
To all radio amateurs

SB QST ARL ARLB033
ARLB033 FCC Declares General Communications Emergency for Oklahoma
Area

The Federal Communications Commission has declared a general
communications emergency for the Oklahoma area. Effective
immediately, amateurs are required to refrain from using 3900 kHz,
plus or minus 3 kHz, unless they are taking part in the handling of
emergency traffic.

The declaration was announced May 9, 2003, in cooperation with ARRL
Oklahoma Section leadership and under the authority of Section
97.401 of the FCC's Amateur Radio Service rules and regulations [47
CFR Part 97].

The FCC said the declaration is to support amateur communications on
behalf of The Salvation Army's tornado relief efforts. The order,
signed by Technical and Public Safety Division Chief Joseph P. Casey
of the FCC's Enforcement Bureau, remains in effect until rescinded.

> recall correctly.

That is incorrect. One may take the General then Extra written exams before the code exam and will be given a certificate of credit if you pass. The certificate conveys NO priviledges. One must then take the code test within a certain time before being granted either license.

While I have *no problems whatsoever* in FCC declaring
a "communications emergency frequency" in a situation
such as this, I think it will be VERY curious to see what
happens tonight as both the 3.898 Group and the "3.903"
Century Club both operate on, and seem to be "quite
possessive" of these freqs.

It would have been much better IMHO if the FCC had
declared 3.990 to 4.000 as the declared emergency
channel(s) in the 75M band.

No just pointing out the absurdity of what Vshah101 was saying. If we let his definition stand that ham radio is a cult because contestor's follow the rules, then we buy into his beliefs and to be consistent would need to apply that same definition to other activities.

By the way your snipping choice is so poor that others cannot tell what led up to my comment or determine whether my comment is or is not a "reducto ad absurdum."

I never referred to contesting as radio sport. I never said anything about sport or athletic activity. I was discussing competition. Competition exists in many realms not just the realm of sports. The jam and jelly competition at the local fair is a competition even though it is not a sport.

In other words competition is NOT a synonym for sport or athletic activity.

>
> Amateur radio DX contesting is nothing but a GAME.

I never said otherwise. Besides games have rules in order to determine winners and rankings. Games are also a form of competition although it may be just against oneself as in solitaire.

And how did you come with this non-sequiter? Since I am a duly licensed Extra class operator (from before the latest restructuring for those to whom it matters), why would I have any interest in an ARRL auxiliary.

Why should I stop? I'm having fun and some people agree with me.

Thats a good award. Instead of Worked All States, there should be awards for station setup time, Worked All Bands (with homebrew bonus), distance awards, low power, radio direction finding.

In other words, awards for real skills and real competition. Instead of turning the dial and calling CQ.

>If you interrupt a fellow who is trying to work a contest just to get a

>is a self-chosen, self-inflicted condition.

At these events, they often eat alot. They eat alot after antenna setups,
events such as the one I went to, hamfests, etc.

This, combined with radio not being an active hobby.

This is why Hams are overweight.

>It is? Where did you get your EE degree(s), Len? What date(s) are on
>the diploma(s)?

I have it. For details, you don't have any right to know.

You already know my work resume, all employers. You
won't reveal yours. Okay, by the same token I don't have
to reveal where or when my degree was granted. :-)

>Why? Does your employment somehow prove that you know more about how
>AMATEUR radio should be regulated than anyone else?

I know enough radio technology to have corporations pay me for
the responsibility of radio design...and many have done so.

I don't have much information on US amateur radio of the 1930s.

The 1930s' standards and practices of amateur radio continue
today, 70 years later, complete with the "necessity" to test for
morse code skills in a hobby-recreational radio activity.

I have one textbook on 1930s radio, "Communications
Engineering," by Everitt, copyrighted and published 1932.
Interesting book, contains radio technology information that
was considered "up-to-date" in my 1978 ARRL Handbook.
I traded another textbook for that with a radio amateur in
New York state; we were both authors of different articles on
the same technology in Ham Radio Magazine.

>So we should ask your friends about you? What would that prove?

It would prove you can dare venture outside Google and
the past. I don't think you have the courage to do that.

>You won't take the testimony of my friends about me....

What "friends?" In here there are only Heil who calls me a
"horse's ass," Kellie who tries to emulate Steamy Stalker
by calling me "putz."

With "friends" like that YOU don't need enemies. :-)

>I think you also sent that unsolicited junk email to me. Why?

Why not?

>Has anyone doubted that you held a commercial FCC license?

Yes. [didn't you look hard enough in Google?]

>Does your
>holding such a license somehow prove that you know more about how
>AMATEUR radio should be regulated than anyone else?

That license grant proved I took a tougher test than any amateur
radio test at an FCC Field Office at a time when there was no
deliberate public information on any answers. It was taken once
and passed before most of the participants in this din of inequity
were either alive or had taken ANY tests of ANY kind.

Neither the staff nor the commissioners of the FCC need to have
passed any amateur radio test in order to determine whether any
VEC QPC question-answer is suitable for any FCC-approved test
for radio amateurs. The FCC regulates US amateur radio as well
as all other US civil radio services.

In case you haven't read the rather simple law on the subject, the
FCC is obliged to accept ALL US citizen input insofar as US radio
regulations on ANY US radio service they regulate.

The grant of an amateur radio license, regardless of date of issue,
does NOT give you or any other radio amateur licensee any sort
of power or control over who should be allowed to comment on US
law of any kind. Neither does it yield any special knowledge of law
over and above anyone not licensed in amateur radio. Neither does
it impart some significant knowledge of amateur radio on amateur
radio matters other than the licensee's experience in amateur
radio.

>> 4. The Stalker then made up a libelous "homepage" on AOL
>> which was a prima facie bit of personal insult easily
>> evidenciary of libelous behavior in any civil court. AOL
>> removed that immediately as well as his equally-libelous
>> new screen name when notified.
>
>Sounds like you can dish it out but you can't take it, Len ;-)

I've "taken it" in here for years. But, I've never been so obsessed
with any particular message arguement to carry sore losing to
such great lengths as:

1. Creating a special Home Page on an ISP deliberately
designed to libel one individual so severely as did Robeson.
That was an outrageous, sick act on his part.

2. Send a specific one-paragraph Comment to the FCC 10 days
after comment cut-off period with the sole subject being his
objection to my commenting to my government plus his
demand that my comment be disregarded.

I can "take it" to the extent of having an attorney file for a civil
court lawsuit on grounds of libel. I can afford such things as
attorney fees for a protacted period. Such a lawsuit would be
almost a cakewalk since prima facie evidence of libel was
clearly evident that ANY AOL subscriber could view; there are
(and were then) millions of AOL subscribers. AOL would have
lost, without doubt. So would Robeson. In Robeson's case
such a financial loss would have been severe in both time and
money.

Rather than "take it" to court, I simply contacted AOL and pointed
out the clear evidence of libel. AOL removed that Home Page
and the newly-created defamatory screen name he created. That
was the honorable course of action on my part and AOL's part.
Robeson remains vengeful, foul-mouthed in an obvious condition
of sociopathic behavior in this newsgroup.

>Do you think your behavior here causes others to respect you? Here's a
>hint: IT DOESN'T.

Irrelevant. All unmoderated newsgroups are free-for-alls where
anyone can post at any time on any subject with freedom to
say whatever they wish to say.

This medium isn't the printed page which remains intact in
thousands of identical copies in many places. This medium
isn't a court of law presided over by a judge...even though some,
like yourself, presume to BE a judge and RULE over those
whom you wish to rule.

This newsgroup is a "24/7" street fight arena subject only to the
vagaries of computer hardware reliability.

"Respect" is not earned by mouthing platitudes and beliefs
espoused by some membership organization for years and then
attempting to demean those who do not accept such beliefs.
"Respect" is a very objective condition, very individual in nature
and you have no, repeat NO, lock on who has or has no "respect."

>> 5. The Stalker tried to manufacture some kind of "case" of
>> "cowardice" about my US Army Signal Corps duties and
>> location, repeatedly refering to my military occupation
>> specialty as "rear area radio clerk."
>
>Did he use the word cowardice?

Yes.

He has never proven that at any time other than mouthing off in
many and varied postings made in here.

>We all know what you did in Japan, Len. You've told us many, many,
>MANY times.

That disturbs you? Too bad. You've never done anything
similar so your apparent anguish over others having done so
seems to indicate jealousy on your part. Not my problem.
I did my military duties as ordered, where ordered, received
an Honorable Discharge from the US Army.

Some of you have a great deal of trouble with anyone serving
in the US military including yourself being highly critical of what
I did. Is that because you've never served in the US military?

>I do remember you mentioning the message totals for ADA in a way that
>could be mistaken to imply that you did it all by yourself. Shall I
>get that one from Google? ;-)

Feel free to post the entirety of what I've ever posted in this
newsgroup. Do it as many times as you wish. You have the
freedom to do that. What will that "gain" you?

It gains you only the irritation of others tired of your sore-loser
attitude attempting to "get" another correspondent. Such wastes
everyone's time, including your own.

>> The Stalker has not made any explicit details of his own
>> military service and "battle experience/heroism" other than
>> the vague generality of "seven hostile actions."
>
>Some folks do, some folks don't.

That is a NULL comment. The Stalker has given NO details of
where or when those took place. It remains vague, undefined.
In other venues it would be called a "fish story." A LIE.

>The way you have described your military service could give some
>people the wrong impression, Len. I recall a bunch of postings about
>being Bear bombers and how close you were to Korea, etc.

I was IN Korea on one short TDY. Irrelevant.

I don't have any power to command others how they are supposed
to read what I write. I can't control your little temper tantrums,
either. Not my problem. Yours.

I enlisted voluntarily at a time when the Korean War was in an
active phase. I was assigned to an Army unit based in the
Tokyo area doing military communications. I didn't have any
control over that. Eugene Rosenbaum, N2JTV, was assigned
to the same unit and the same time and with identical jobs, but

on different work shifts. We were US Army soldiers and signalmen. We all knew the proximity of the USSR and North Korea and did extra training weekly in infantry skills.

Do you wish extreme accuracy in ALL military-oriented comments as to plan, position, strategy, and tactics? Why? You've never served in any military, have absolutely NO experience of being IN a position where you may be in direct danger at any time and for prolonged periods of time. The 19 members of my signal battalion did not want to perish in that crash in Korea on July 1, 1950...they never got to "fight" in any combat in Korea. They were flown from their unit in Japan to Korea on short notice, under orders to go to Korea. I doubt they went to any USAF aircraft guide to find out exact distances of USSR flight times or what USSR aircraft types were in use. Regretably they all perished in an accident, while IN uniform, doing their duty as soldiers and signalmen.

>More important, you don't show much respect towards other veterans who
>served if those veterans disagree with you on other issues.
>Interesting.

Normally, if still in the US military, I'd use military language to tell you GO FUCK OFF! and follow that with appropriate physical action. However, being as you've never served in the US military and, as a morseman, probably don't know much about sex either, I would simply flip you the bird and go on to other things.

You are ignorant due to non-exposure to such things, probably never left the continental United States. You will NEVER understand any brotherhood of being in a military branch of any kind.

>Here's a classic example.

I snipped a posting that is over 3 years old.

Miccolis seems to live in the past, constantly referring to old public postings as if they are recent or applicable. The past is past. This is NOW, not yesterday.

>Gee, Len, you really showed another veteran some respect, huh? And
>that was in a thread where you weren't even being addressed.

Miccolis isn't in any position to "judge" the contents. All he has is a little temper tantrum and some kind of need to "get" another that displeases His Greatness. Bird. Flip. Enjoy.

>Why is it OK for you to tell the FCC to disregard another's comments,
>but not OK for someone to tell the FCC to disregard yours?

Feel free to post the ENTIRETY of my 14-page Reply to Comments on FCC NPRM 98-143. You can then ask "the

jury" for their "decision" and then pronounce me "guilty."

No problem with me. Carry on, judge. Bird. Flip. Enjoy.

>You sent your 14 pages to the FCC so late that there was no way anyone
>could reply before the January 15 deadline.

The FCC postponed deadline was established as 15 January 1999.

My document, all required paper copies AND floppy disk with
the identical text were sent via USPS registered mail over a
week prior to deadline. The return receipt through USPS arrived
before the FCC time-stamping of 13 January 1999 as indicated
in the FCC archive copy on their ECFS.

I complied with both the law and the requested format given by
the FCC in a voluntary expression of one US citizen towards his
government as guaranteed in the Constitution of the United
States of America.

Many others filing comments were marked as received on the
same date period. You do not mention those yet those are
also on the public record. For your snide, petty little displeasure
in that tiny tantrum I give you this: Bird. Flip. Enjoy.

>BULLSHIT.
>
>There's just no other word for it, Len.

Of course there are "other words" for it, Pedantic Parson of
the newsgroup. Tsk, tsk, tsk.

Uncouth language of ruffians in the pristine purity of this
newsgroup!

Bird. Flip. Enjoy.

>C'mon, Len, you made the claim, you back it up. Show us the actual
>postings.

You are wasting all our time, Pedantic Parson.

Here: Bird. Flip. Enjoy.

>You may find a "Lennie" or "LHA" back a few years, but that's about
>it. As for "false accusations", you won't find any of those.

There are dozens, perhaps hundreds.

"Putz." "Coward." "Lier [sic]." "Horse's Ass." Just recently,
in this year. :-)

>Find 'em and show 'em, Len. Can you? I think not.

I won't bother. I'm not the one demanding over and over to
dredge up OLD postings. You are. Go to the past. Stay

there and quit wasting everyone's time.

Jimmie boy, you must learn to live in the here and now.
I don't credit you with any ability to live for the future. You
have to continue to beat those old, dead horses and I can't
understand any motivation for that except some perverse
pique on your part for not Getting Your Way in the beginning.

>noticed DX (when the sunspots were in) and found it fun to
>do the DX. This essentially exploded overnight and the FCC
>was overwhelmed, and eventually said screw it and didn't worry
>about violations not involving non type accepted equipment.

Class D CB was created in 1958. That's the "CB" that all
of today refer to in comments. Class A and B CB disappeared
with radio service restructuring. Class C CB (radio control)
was lumped in with Radio Control Radio Service in Part 95.
R/C Radio Service later got many new frequencies in a
72 MHz band.

Class D CB transceiver sales in the USA had begun to
slump prior to the importation of off-shore manufactured units
about 1965. A few years later almost all CB transceivers were
built off-shore and most also designed off-shore. The lowering
of costs to under $100 over the counter was probably a greater
impetus for the boom in sales and user popularity.

A song and movie featuring CB owe more to the CB users
already being numerous enough to permit identification of the
public with CB use. Songs, movies, and TV shows probably
ADDED to the popularity after they appeared.

>I had a CB license KAAR5167 back in 1976, then "upgraded"
>to ham radio in August 76 "WA2ISE".

That's nice. My first CB license had the callsign "11W8893."
That was in 1959. :-)

>People who say 2m or some other band is just like CB ought to
>listen to the 27MHz CB band sometime....

Living as I do within a mile of Interstate 5, all I hear on CB is
heterodynes, all channels. Can't remember hearing any
heterodynes on the amateur 2m band. I'd say you are right.

It's very difficult to discern any foul language amidst all the
heterodynes on CB. It's like trying to hear ANY voice while
listening to commercial SSB with 6 KHz of TTY tones. :-)

>that same definition to other activities.

You are still reducing things to the absurd.

Vipul Shah has clearly indicated his opinion of the olde-tymers
in ham radio as "cultists." See all of his postings prior to
mentioning radio contests...[on-off keying] CW as the best
mode as a cult belief...mythical symbols (whouff-hong and
rettysnitch) that originated in Newington...the concentration
on HF bands and DXing...many other cultist trappings and
traditions.

>By the way your snipping choice is so poor that others cannot tell what led
>up to my comment or determine whether my comment is or is not a "reducto ad
>absurdum."

Tsk, tsk, tsk, OG. Instead of chiding Shah on some faulty
expressions of his opinion in English, you did the "reduction to
the absurd" by claiming that his mention of contesting was
equivalent to cultism.

>> Amateur radio DX contesting is called "radiosport."
>>
>> "Sport" involves athletic activity.
>>
>> A number of older men sitting alone at their radios for hours on
>> end doing nothing but listening and twitching fingers of one
>> hand is NOT any sort of athletic activity.

>
>I never referred to contesting as radio sport. I never said anything about
>sport or athletic activity. I was discussing competition.

The Pedantic Parson, K2EY, has often referred to contesting
as "radiosport." Since he imagines himself a "leader" in this
forum, I thought all morsepersons bowed to that terminology.

I apologize to another pedant.

>Competition
>exists in many realms not just the realm of sports. The jam and jelly
>competition at the local fair is a competition even though it is not a
>sport.

When jam, jelly, and local fairs are directly a part of amateur
radio policy discussion topics I will bow to your wisdom.

>In other words competition is NOT a synonym for sport or athletic activity.

I never claimed you said the opposite. :-)

>> Amateur radio DX contesting is nothing but a GAME.
>
>I never said otherwise. Besides games have rules in order to determine
>winners and rankings. Games are also a form of competition although it may
>be just against oneself as in solitaire.

Some radio amateurs in here imply that contesting is the equal
to emergency communications operations. That isn't done in
solitude.

But, I will drop that since you will object to the introduction of a
new direction, etc., etc., etc. Strike what I wrote on that.

>> I don't think you can stand the open competition of newsgroup
>> discussion, Dee. I would suggest that you give serious
>> thought to stopping access this newsgroup. It isn't a woman's
>> syncophantic ARRL auxilliary site.
>
>And how did you come with this non-sequiter? Since I am a duly licensed
>Extra class operator (from before the latest restructuring for those to whom
>it matters), why would I have any interest in an ARRL auxiliary.

Please forgive my choice of words. I was under the assumption
that most people would think the word "auxiliary" meant "helping"
or "subsidiary" or "supplementary" as the dictionaries define it.

Since dictionaries do not associate the word "auxiliary" with any
gender...contrary to some colloquial uses as in "women's
auxiliary" meaning a group of women...I intended to have the word
"auxiliary" refer to a secondary role of this forum being a free
supplementary outlet for ARRL olde-tyme ham Beliefs.

I can understand your gender displeasure since US amateur radio
is overwhelmingly an activity of middle-aged white males.

>Why should I stop? I'm having fun and some people agree with me.

Indeed, why should anyone "stop?"

ARRL olde-tyme ham Beliefs are not of the divinity nor are they
some form of Universal Truths however self-evident to Believers.

There is no consensus that your statements are agreeable.

Ahh, I'm one of those who love the motion of the ship. Relaxes me. The only time I've had a problem was on a huge boat that ends up being pretty regular in response to the wave action. After I went on a cruise last fall, I found out the ship ended up with about a 15 second period. But I only found out after the cruise was over and I had sea legs for a week. But on the ship I slept like a baby.

Chris:

You have to take and pass the three written tests in order (Tech, then General, then Extra. You can do them all in the same session, though.

The code test can be taken at the same time or later. I took all four elements at once to get them over with. <grin>.

The code was tough for me due to a mild learning disability..but it was still quite doable. There are several freebie Code learning tools available on the web and several ones that cost money. What worked for me (and, I must admit that my objective was to pas the test, not to really learn Morse code) was the standard method of learning a character, then adding a second.. recognizing the difference between the two then adding a third, etc. The code exam is one message from a pseudo-QSO . Knowing the format and what to expect helps quite a bit..so get some software that sends a similar QSO type message.

Good luck

Not "living proof," schmuck...my "work in electronics" involved design engineering responsibility and that included final approval signature on engineering drawings and reports.

Robeson's sole "engineering work" involved a short time as a purchasing agent for a single electronics firm. All purchasing agents "sign off" are purchase orders. Paperwork shufflers.

>wannabe shrink as "qualification". Her "credentials" are even more dubious
>than yours.

I do not "sleep with any correspondence course wannabe shrink," schmuck. I sleep with my legal wife, my wife under God since we were married in church by a pastor. That marriage is part of publicly available documentation at the County of Los Angeles..

My wife has a Bachelors degree from Beloit College, Beloit, WI, a Masters degree in Education from University of Illinois and a Masters degree in Social Work also from U of I. The University of Illinois is NOT some "correspondence course" place, neither is Beloit College, a smaller and older academic institution at the southern border of Wisconsin. The curricula for both college and university will confirm what courses were required to complete those degrees. The Masters in Social Work requires considerable psychology.

The "dubious credentials" as you spitefully put it wrongly, are verifiable through registrar's archives and also with the states of Illinois and Washington, both of which licensed her for private practice in Social Work counseling. She was in private practice for over a decade in Washington state and has dealt much with disturbed individuals who were in the military service, were spouses or family of servicemen, were military veterans, or workers at Bremerton Navy Yards, Fort Lewis, and McChord AFB. My wife has you typed, categorized, indexed, identified in a typical set of syndromes of mental disturbance. Almost a "no brainer" to identify either with formal training in psychology or how I obtained it from the College of H. Knox.

Let's talk about the schmuck's favorite subject, himself. Robeson has NO degree in any engineering discipline, not even any formal college class training in electronics, yet he claims to be a qualified judge of anyone already IN or having been IN engineering. Robeson has NO claims of ever having done any military radio communications, has never identified any piece of radio equipment by name, formal or common, has no knowledge of the most common small unit land-air radio in the US military of the last 14 years (a quarter million of those in nearly all branches of the US military now). He has said he wont name the equipment because of "security reasons" despite US electronics industry trade publications having publicly identified those, their nomenclature, contract money amounts, and the entity awarded the contract. In short, he has continually lied by omission, giving false reasons why information "cannot be discussed."

Schmuck Robeson's "radio experience" is almost entirely obtained from amateur radio and his "radio knowledge" comes from the popular newsstand amateur radio publications. Yet he insists he has some sort of "qualifications" in which to "judge" others who are or were in regular professional engineering work, have been active in HF radio communications before he was born, or know more about the rest of the radio communications world than he will ever learn on memorizing the advertisements in QST. He is corrupt in qualifications, corrupt in judgement, beneath contempt as a human being for his behavior in this forum.

A counter to the schmuck's mentioning of wives would be to turn around and talk about his, of indeterminate number, and THEIR qualifications. Fair is fair, isn't it? However, that is not "good form" as the Brits might say, ungentlemanly conduct.

None of this message is about "saving any Novice Class license." Robeson stayed away from that. Instead, he went into his disturbed mental state mode and railed at his pet "enemies" for replying to another member of the Gang of Four. It would seem the thread Subject line should be "saving of the old-time Amateur Extra Class" since Robeson is a high-magnitude negative representative of US amateur radio humans. He may be beyond

saving, but I have hopes for others with better mental health.

That's not a "new identity." I had that as a handle back on BBSs
as a co-sysop of one system...and is the first additional screen
name I used on AOL years ago. I've posted with that screen
name in here before.

I would suggest you put ALL the individuals who disagree with
you in those "kill files." Such ostrich-like behavior will preserve
your Belief systems in US amateur radio as pure, pristine, and
ordained by ARRL. New thoughts and concepts might still
arise, but not nearly as many as being brave enough to view
ALL who don't agree with olde-tyme ham radio ideas.

Bye. Beep, beep.

Not "living proof," schmuck...my "work in electronics" involved design engineering responsibility and that included final approval signature on engineering drawings and reports.

Robeson's sole "engineering work" involved a short time as a purchasing agent for a single electronics firm. All purchasing agents "sign off" are purchase orders. Paperwork shufflers.

It should be the 3905 century club, unless they changed names and freq, but anyway 3.903 is 3 kc away from the wx net. They have no problem. The ones on 3.898 will have to scram for a while or drop to 3.897. It's that simple. Possessive won't mean too much with Riley lurking over their shoulders. And I bet he will be just to see what is happening. The FCC takes that wx net stuff dead serious. Anyone that interferes with it, and the fcc hears them, can expect a serious letter coming in the mail. :(Why would they need 10 kc? It's only one net. Not three. MK

You can take the elements in any order, but if you had elements 3 and 4 without 2, for example, it wouldn't get you a licence, or if you had 2 and 4 without 3 you would only be a Tech. I say this as a Volunteer Examiner (expired).

Yes, because there are no SUBSEQUENT elements to the extra class element.
There are PREVIOUS elements, ALL of which must be taken or a demonstration of
credit via a previous license (for element 1, an expired license may be
acceptable depending on its class).

> I've looked at the theory part of the exam, and everything looks

I'm certain they can. I can only speak for myself here..... I used a computer
program sending random characters at a speed 15% faster than the test speed I
planned to take (back during the 5, 13, and 20 WPM structure).

No, you don't recall correctly. Although the lower classed written elements must be passed first, the code element does not need to be. However, without it, all one will have is a no-code Technician license (and element credit good for 365 days).

Taking elements out of order is generally at the discretion of the examination team, and most if not all won't normally let someone do that. I say that as a VE, having operated at least one test session per month since January 1994, and still doing so. Only the written elements have an order to them.

Lots of long haul truckers use 3898 at night in my part of
the country. This will not set well with them. In fact, I just
checked 3898, and the truckers, many not licensed, said,
"Screw the FCC." Riley has a fair record of nailing people
who use call signs but a dismal record of doing anything
about unidentified stations. Just heard chatter on 3898 telling
everyone to make sure they do not use call signs.

That's just not true, Len. The written tests of today are completely different.
The code test of today is much simpler and easier than that of the 1930s. The
application process is different, too.

The tests are still given in English, though. English is a pretty old language.

Why? You don't venture outside the past much. You keep talking about the 1930s and your military experience of a half century ago, and on and on. The only new idea in amateur radio regulations I've ever seen you come up with is wanting the FCC to enact a minimum age requirement so that young people under the age of 14 would be banned from getting amateur radio licenses.

> I don't think you have the courage to do that.

Why should I call up your alleged friends and ask them about you? Do you think it would somehow justify your years of hostile, abusive, belligerent behavior here?

Here's a clue: It won't.

"Courage" has nothing to do with it.

You cannot talk your way out of a situation you behaved your way into.
>

>
> Why not?

"You cannot answer a question with another question". Those are your words, Len.

And all of your misdirection above is a blatant attempt to avoid answering this question: Does your employment somehow prove that you know more about how AMATEUR radio should be regulated than anyone else?

You avoid answering that question, for some reason.

>>Has anyone doubted that you held a commercial FCC license?
>
> Yes. [didn't you look hard enough in Google?]

Who? Not me.
>
>>Does your
>>holding such a license somehow prove that you know more about how
>>AMATEUR radio should be regulated than anyone else?
>
> That license grant proved I took a tougher test than any amateur
> radio test at an FCC Field Office at a time when there was no
> deliberate public information on any answers.

Tougher test? I don't think so. I have heard from those who took both tests that the tests required for the Amateur Extra at that time were tougher than those required for the First 'Phone.

You cannot know it was "a tougher test" when you did not take the tests you compare it to. Your logic fails.

What you're trying to sell us is the idea that your passing a single test for a COMMERCIAL license many years ago somehow proves that you know more about how AMATEUR radio should be regulated than anyone else. No sale.

> It was taken once
> and passed before most of the participants in this din of inequity
> were either alive or had taken ANY tests of ANY kind.

There you go, living in the past and its standards and requirements.

How does your passing such a license test so long ago somehow prove that you know more about how AMATEUR radio should be regulated than anyone else?

Does the following sound familiar, Len?

'That's all very nice and dramatic but wasn't it the United States Army where you learned all that? The same US Army that gave you food, lodging, shelter, and free clothes, medical care, and training as needed? The same US Army that taught you radio electronics theory and practice? It wasn't amateur radio, was it?

Len, the time for demanding Medals for Meritorious Service in
the US Army is past for you. That was not amateur radio, it was
PROFESSIONAL radio. You were paid for what you did (in
several ways). It was your JOB. I'm sure that the US Army did
not put you on watch if you couldn't cut it. I don't see how
all that makes you some Number One Ichiban HAM Honcho
NOW.'

It's simply YOUR words to Jeff Herman, with a few changes from his name to yours and the US Coast Guard to the US Army. Original source is dated March 28, 2000. (Can't be called "plagiarism" if the original source is credited.)

Practice what you preach, Len.

And btw, I passed the Amateur Extra in 1970 at the age of 16. Much, much younger than when you passed that First Phone. And "at a time when there was no deliberate public information on any answers", too. I was self-trained in radio, at my own expense, not taxpayer dollars.

> Neither the staff nor the commissioners of the FCC need to have
> passed any amateur radio test in order to determine whether any
> VEC QPC question-answer is suitable for any FCC-approved test
> for radio amateurs.

So? They have made mistakes in those questions, requiring a few embarrassing recalls of defective questions AFTER they were approved for use.

However, those FCC folks completely ignored your idea about an age requirement. That PROVES you WRONG, huh?

btw, the members of Congress, and the White House staff right up to the President don't need to have military experience in order to be in charge of the US military. Vice President Dick Cheney, former Secretary of Defense, used several student deferments and avoided military service during the Vietnam era. (Source: biography of Colin Powell)

> The FCC regulates US amateur radio as well
> as all other US civil radio services.
>
You don't work for the FCC. I don't think you ever have. So that doesn't apply to you.

> In case you haven't read the rather simple law on the subject, the
> FCC is obliged to accept ALL US citizen input insofar as US radio
> regulations on ANY US radio service they regulate.

Of course! Has anyone tried to stop you from submitting comments to the FCC?
>
> The grant of an amateur radio license, regardless of date of issue,
> does NOT give you or any other radio amateur licensee any sort
> of power or control over who should be allowed to comment on US
> law of any kind.

Who said it does? Not me.

> Neither does it yield any special knowledge of law
> over and above anyone not licensed in amateur radio.

Who said it does? Not me.

The grant of a commercial radio operator license, regardless of date of issue, does NOT give you or any other licensee any sort of power or control over who should be allowed to comment on US law of any kind. Neither does it yield any

special knowledge of law over and above anyone else.

> Neither does
> it impart some significant knowledge of amateur radio on amateur
> radio matters other than the licensee's experience in amateur
> radio.

But the amateur radio experience of an active radio amateur DOES exceed the experience of any unlicensed person. In other words, us licensed, active hams have experience, knowledge and skills about AMATEUR RADIO that you do not, Len. That's a plain, simple fact.

>>> 4. The Stalker then made up a libelous "homepage" on AOL
>>> which was a prima facie bit of personal insult easily
>>> evidenciary of libelous behavior in any civil court. AOL
>>> removed that immediately as well as his equally-libelous
>>> new screen name when notified.
>>
>>Sounds like you can dish it out but you can't take it, Len ;-)
>
> I've "taken it" in here for years.

Dished out far more, too. You don't have to be here, nor behave the way you do. You choose to do those things.

> But, I've never been so obsessed
> with any particular message arguement to carry sore losing to
> such great lengths as:
>
> 1. Creating a special Home Page on an ISP deliberately
> designed to libel one individual so severely as did Robeson.
> That was an outrageous, sick act on his part.

In your OPINION. Someone else would think it was funny. Me, I think it was in bad taste.

Besides, that was over FOUR YEARS AGO, wasn't it? You live in the past too much.
>
> 2. Send a specific one-paragraph Comment to the FCC 10 days
> after comment cut-off period with the sole subject being his
> objection to my commenting to my government plus his
> demand that my comment be disregarded.

What was wrong with that? He filed a late Reply Comment, that's all. Why does that bother you so much. And that was over FOUR YEARS AGO, wasn't it? You live in the past too much.
>
> I can "take it" to the extent of having an attorney file for a civil

Obvious attempt to get me to reply in kind. Typical.
>
> You are ignorant due to non-exposure to such things,
> probably never left the continental United States. You will
> NEVER understand any brotherhood of being in a military
> branch of any kind.

Apply that same logic to the amateur radio service.

Is it "brotherhood" that is evidenced in your posts here to other veterans,
many of whom served our country much longer than you did?
>
>>Here's a classic example.
>
> I snipped a posting that is over 3 years old.

Your beefs with K4YZ detailed above are even older. You live in the past too
much.

Because it embarrasses you. But those were your words, and they prove my point.
>
(N2EY)

> seems to live in the past, constantly referring to old
> public postings as if they are recent or applicable. The past is
> past. This is NOW, not yesterday.

Then why do you refer to the past so much?
>
>>Gee, Len, you really showed another veteran some respect, huh? And
>>that was in a thread where you weren't even being addressed.
>
(N2EY)

>isn't in any position to "judge" the contents.

Yes, I am.
>
>>Why is it OK for you to tell the FCC to disregard another's comments,

>
>> Just HOW do you suggest that those "rules" be set up in order to allow
>>points to be obtained, Vipidiot? By seeing who can get the lowest SWR?
>
>Thats a good award. Instead of Worked All States...(SNIP)

"Worked All States" is NOT a contest, Vippy. It's an operating award.
Please learn the difference.

>...there should be awards for
>station setup time, Worked All Bands (with homebrew bonus), distance awards,
>low power, radio direction finding.

"Set up time"...??? In what? How? I pull a K2 out of my back pack,
throw a wire in the tree, plug in the tuner and the battery and I am QRV in 2
minutes.

For "Worked All Bands", refer to 5BWAS, 5BDXCC, 5BWAZ, etc etc etc...There
are already a plethora of multiband awards out there.

Again, your inexperience is glaring.

>In other words, awards for real skills and real competition. Instead of
>turning
>the dial and calling CQ.

Again, your ignorance and lack of experience is G L A R I N G ! ! !

If you think that "turning the dial and calling CQ" is all there is to
contesting, you're just plain stupid.

>I won't cite the event I went to recently, the clubs I've been to for obvious
>reasons- I will run into these people again, perhaps at Field Day.

In other words you don't want the word to get out to these people about
how you talk about them in a public forum. You "want your cake and to eat it
too".

>>What you are doing is lying.
>
>No, these are true accounts of the events I've been to, from my point of

When you are directly a part of amateur radio, I will bow to your
wisdom.

> Some radio amateurs in here imply that contesting is the equal
> to emergency communications operations. That isn't done in
> solitude.

Not true. Some radio amateurs in here have stated that skills developed
in contesting are the same skills desired in emergency communications.
Contesting is not done in solitude. Communicating with several thousand
stations over the course of a weekend can't be done without the several
thousand stations operated by other individuals. Amateur radio
operating is a very social activity.

If you intend to use "auxiliary", why do you keep writing "auxilliary"?
I'll bet you made another mistake. Odd that you chastise others for a
spelling error when your own posts are rife with them.

> I can understand your gender displeasure since US amateur radio
> is overwhelmingly an activity of middle-aged white males.

Can you establish a pattern of an organized effort to keep out women and
minorities? If not, you're simply blowing smoke.

> >Why should I stop? I'm having fun and some people agree with me.
>
> Indeed, why should anyone "stop?"

Just a few paragraphs earlier, you were suggesting that Dee stop access
to this newsgroup.

> ARRL olde-tyme ham Beliefs are not of the divinity nor are they
> some form of Universal Truths however self-evident to Believers.
>
> There is no consensus that your statements are agreeable.

I agree with Dee. Do you really want to see this put to a vote?

>> specialty as "rear area radio clerk."
>
>Did he use the word cowardice?

To be factual, Jim, I used the word "cowardly" in respect to his attempts
to embellish his military "career" by associating himself with Army KIA's that
died 3 years before he got there and hundreds of miles away.

I did NOT say his duties in the Army were "cowardly". That's a
LennieSpin.

I've only called you a horse's ass because you are a horse's ass. I
recognized that from the road apples you keep dropping here and there in
the newsgroup. Did you ever catch up with the front end of that horse
you're supposed to be following?

> With "friends" like that YOU don't need enemies. :-)

It'd be just as easy to dimiss any of your friends, Leonard. I figure
that the opinions of anyone who claims you as a friend can't be worth
that much.

> >Does your
> >holding such a license somehow prove that you know more about how

> VEC QPC question-answer is suitable for any FCC-approved test
> for radio amateurs. The FCC regulates US amateur radio as well
> as all other US civil radio services.

Since you don't work for the FCC, I fail to see what bearing that has on
anything. FCC staffers are paid to regulate amateur radio.

> In case you haven't read the rather simple law on the subject, the
> FCC is obliged to accept ALL US citizen input insofar as US radio
> regulations on ANY US radio service they regulate.

Accepting it isn't the same as acting positively on it. You wrote. The
FCC accepted. You aren't writing your material here for the FCC. I
don't have to accept it. I don't have to take it seriously.

> The grant of an amateur radio license, regardless of date of issue,

> radio.

My forty years experience in amateur radio certainly qualifies me to
know more of amateur radio matters than an individual who has no
experience in amateur radio. You'd be a fool to argue the point.

> >> 4. The Stalker then made up a libelous "homepage" on AOL

> (and were then) millions of AOL subscribers. AOL would have
> lost, without doubt. So would Robeson. In Robeson's case
> such a financial loss would have been severe in both time and
> money.

You're simply blowing smoke. You're blowing smoke about your ability to pay an attorney for a "protracted period". You're blowing smoke about cakewalks, prima facia evidence, about AOL and "Robeson" losing "without doubt". Did you forget about the existence of all of your past posts at Google? A smart guy would load up on all of that material.

> Rather than "take it" to court, I simply contacted AOL and pointed
> out the clear evidence of libel. AOL removed that Home Page
> and the newly-created defamatory screen name he created. That
> was the honorable course of action on my part and AOL's part.

...and we all know you to be a man of honor (stifled laughter).

> I did. Is that because you've never served in the US military?

The laughter wasn't stifled this time. No one was critical of what you did in the military. A number were critical of the way you attempted to puff your activities. Remember your post to Jeff about being under fire?

> >I do remember you mentioning the message totals for ADA in a way that

...the upper hand in the fact department for one thing.

> It gains you only the irritation of others tired of your sore-loser
> attitude attempting to "get" another correspondent. Such wastes
> everyone's time, including your own.

Remember, Len. You've described this medium as a 2/47 street fight
where anyone may post whatever he wants. You don't suppose anyone is
being forced to read Jim's material do you? Are you being forced to
read it or forced to respond to it?

> >> The Stalker has not made any explicit details of his own

You mean running like hell after you uttered the words in caps?

> However, being as you've never served in
> the US military and, as a morseman, probably don't know
> much about sex either, I would simply flip you the bird and
> go on to other things.

So that we're clear on this, you don't believe that anyone who never served in the military and who knows morse code doesn't know much about sex?

> You are ignorant due to non-exposure to such things,
> probably never left the continental United States.

There's a claim which is full of more than holes.

> You will
> NEVER understand any brotherhood of being in a military
> branch of any kind.

Apparently you were in the military during a special period. There were drunks, drug addicts, psycopaths, liars and thieves in every outfit in which I served in the military. I didn't hang out with them. I disapproved of their behavior. I don't consider myself to be part of brotherhood with all of those with whom I served.

> >Here's a classic example.
>
> I snipped a posting that is over 3 years old.
>
> Miccolis seems to live in the past, constantly referring to old
> public postings as if they are recent or applicable. The past is
> past. This is NOW, not yesterday.

...but "NOW" includes your tales from the Korean War and "NOW" includes your commercial FCC license? Were you so embarrassed over being quoted that you needed to snip the material?

> >Gee, Len, you really showed another veteran some respect, huh? And
> >that was in a thread where you weren't even being addressed.
>
> Miccolis isn't in any position to "judge" the contents. All he has

>
> 1. Creating a special Home Page on an ISP deliberately
> designed to libel one individual so severely as did Robeson.
> That was an outrageous, sick act on his part.

You alleged in this forum that you did NOT send a photo with an unknown
person exposing himself. That was a lie. I "exposed" you for what you were.

You sent that e mail uder the guise of a copy of your FCC license. It was
a ruse...a Trojan Horse...then you claimed it was a "mistake".

Of course you ALSO allege to being an electronics "professional", having
been paid for your engineering and consulting skills.

Those were lies too, methinks. If you can't send a simple e mail and get
it right, how are we to accept that anythig ELSE you allege is accurate?

>2. Send a specific one-paragraph Comment to the FCC 10 days
> after comment cut-off period with the sole subject being his
> objection to my commenting to my government plus his
> demand that my comment be disregarded.

As you attempted to "blunt" Mike Deignan's?

>I can "take it" to the extent of having an attorney file for a civil
> court lawsuit on grounds of libel.

And then that attorney gets to see all the "libellous" posts YOU have made over the past few years.

Go ahead, Your Putziness...make my bankroll...

>Such a lawsuit would be
> almost a cakewalk since prima facie evidence of libel was
> clearly evident that ANY AOL subscriber could view; there are
> (and were then) millions of AOL subscribers. AOL would have
> lost, without doubt. So would Robeson. In Robeson's case
> such a financial loss would have been severe in both time and
> money.

I still have your offer of an e mail copy of the "license" and the actual received "document". So, as I said, Lennie, go ahead...Make My Bankroll. Let's just see how far that retirement of yours will support your ego...AND your mouth.

>Rather than "take it" to court, I simply contacted AOL and pointed
> out the clear evidence of libel. AOL removed that Home Page
> and the newly-created defamatory screen name he created

I dare say your results in court would be far less satisfactory than what AOL allowed you.

>That
> was the honorable course of action on my part and AOL's part.
> Robeson remains vengeful, foul-mouthed in an obvious condition
> of sociopathic behavior in this newsgroup.

For "foul mouthed" we'll defer to Lennie's recent use of "BS" over twenty times in one post.

>>Do you think your behavior here causes others to respect you? Here's a
>>hint: IT DOESN'T.
>
> Irrelevant. All unmoderated newsgroups are free-for-alls where
> anyone can post at any time on any subject with freedom to
> say whatever they wish to say.

VERY relevent. You insist on trying to "moderate" thread direction and content all the time. Why is it OK for you and not for others?

>"Respect" is not earned by mouthing platitudes and beliefs
> espoused by some membership organization for years and then
> attempting to demean those who do not accept such beliefs.
> "Respect" is a very objective condition, very individual in nature
> and you have no, repeat NO, lock on who has or has no "respect."

In THIS case, the object is YOU, and in THIS case, he's right on. You (and now your padawan learner, Vippy the Voiciferous) are the court jesters of Amateur Radio.

>>Some folks do, some folks don't.
>
> That is a NULL comment. The Stalker has given NO details of
> where or when those took place. It remains vague, undefined.
> In other venues it would be called a "fish story." A LIE.

Not a lie. Intentionally vague. With good reason. That YOU think it a
"lie" or a "fish story" is irrelevent. Too bad for you.

>I was IN Korea on one short TDY. Irrelevant.

So was I. On SEVERAL "short" TAD's. None of those operations gave me the
right to claim some embellishment of my real service career based on having
been in the same enviroment where combat Marines were killed.

>I don't have any power to command others how they are supposed
> to read what I write.

Sure you do. WHAT you write and HOW you write it make all the difference.
You are interpreted EXACTLY how you intend to be "interpreted".

>I can't control your little temper tantrums, either.

No one except you and Markie have had any...

>Do you wish extreme accuracy in ALL military-oriented
> comments as to plan, position, strategy, and tactics?

Do you have a reason to lie?

>Normally, if still in the US military, I'd use military language
> to tell you GO FUCK OFF!...(SNIP)

Whew! Temper tantrum AND "obscene" all in one sentence.

>and follow that with appropriate
> physical action. However, being as you've never served in
> the US military and, as a morseman, probably don't know
> much about sex either, I would simply flip you the bird and
> go on to other things.

Hmmm...a NOT SO veiled theat, use of verbal and visual obscenities and
attempts to embellish YOUR "sexual prowess" at the expense of another man...

BBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
AHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! ! ! !

GO AHEAD LENNIE, TAKE >>US<< TO COURT FOR LIBEL! ! ! !

>Miccolis isn't in any position to "judge" the contents. All he has
> is a little temper tantrum and some kind of need to "get"
> another that displeases His Greatness. Bird. Flip. Enjoy.

Temper tantrum and expression of profanity vs "civil debate" noted.

BBBWWWWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! !

>

Certainly not all. We would let someone do that in our VE group. I don't see what the big deal is. The only actual examples I can think of were engineers or technicians (that is real technicians with a small 't', not people with a Technician ham licence) who took multiple theory elements in the wrong order in a single session. We're pretty relaxed, but keep strictly within the rules, of course.

We don't care if people write down dots and dashes either, as there's no rule to say you can't. Yes, I know I'm on record as opposing code testing, but our other VEs aren't particularly opposed to it. They just beleive that there's no sense in adding additional requirements that aren't asked for by the FCC, although I know many do.

I haven't personally done a VE session for a while, so long that my status has lapsed. I must get around to renewing my VE status so I can get back into it. We only have a test session every 2-3 months anyway, and attendance is often pretty thin even then. This may have something to do with the fact that we don't teach classes, and the next club North of us does, so anyone who takes classes will most likely test at one of their sessions at the end of the course. Technically, our VE group is not part of the club we all belong to, as it was formed first before we had a club in this county. We all used to be members of that other club that runs the classes.

You do things your way ...

>
> Bob
> 3898 Observer

I wasn't aware there was a group of unlicensed truckers using 3.898. A
new one on me...But no matter. They are "sick-bird" ops, IE:
ill-eagle, and their views don't count. No one cares what they think.
I hope Riley takes a big dump on them. And yes, they generally don't
have time to go after unlicensed ops's unless they start causing a
noticable ruckus. But getting 2 kc away from a wx net will bring the
heat down on them mucho fast. The FCC has the ability to easily find
these guys IF they really want to. MK

I don't hate Ham radio. I believe Hams are generally nice people who have
different interests.

Hams seem to be interested in certain aspects - antennas, contests, CW, DX,
collecting wallpaper, ragchewing.

>That being the case, what is your motivation for continuing to post here?

To show that there are other possible activities in the radio hobby.

Also under the screen names "nocwtest@aol.com", "lenof21@aol.com", "averyfine@aol.com". Len has probably used other screen names here without being recognized.

Now it's understandable that a person might change screen names when changing ISPs, moving, etc. But one has to wonder why Len has used so many different screen names to post to the same newsgroup from the same location using the same ISP.

>Vipul Shah finds anything he doesn't understand "cultlike".

I DO understand contesting. I don't understand why the fanatical following of certain traditions. 10-10 numbers are "not allowed". A child that doesn't know CW is "not good enough". The use of codewords as some kind of agreed upon tradition. Plus many more examples.

>Not true. Some radio amateurs in here have stated that skills developed
>in contesting are the same skills desired in emergency communications.

Searching bands and CQ for contests is not emergency communications. Some skills, like the initial setup of the station, is useful. But these are side effects. Not as effective as doing emergency communication practice drills.

>Amateur radio
>operating is a very social activity.

Wrong. They work DX at a remote location, while others are vacation'g. They contact others by radio at the same time others are there in person (at the beach, for example). Not a social activity. Anti-social.

>> ARRL olde-tyme ham Beliefs are not of the divinity nor are they
>> some form of Universal Truths however self-evident to Believers.

Hams do not understand thier anti-social nature and that others may see them as a cult.

Hate to burst your bubble, Leonard. The fighting ended a half century back. If you feel that things aren't over, suit up and hop back over to finish things up.

> Such total ignorance is not any sort of virtue.

Didn't they bother to tell you that the fighting had stopped?

> Combined with vague, ambiguous claims of being IN a country
> at war yet never detailing anything in that regard, that makes
> such claims appear false.

Leonard, all you need to know is that I served in Viet Nam in the Air Force in '70-'71. I drew combat pay for my time there. If that appears false to you, I can live with it.

> It seems that nothing of Mr. Extra Terrific's confused postings
> has anything to do with amateur radio and certainly not about any
> Novice Class amateur license.

Why do you keep asking me questions about the military?

> I put Mr. Extra Terrific into the mind rot victim category.

To do so, you'd first have to be able to tell the difference. I don't think you're up to it.

> these guys IF they really want to. MK

Not really. The commission cannot "easily" find someone, even
when they want to. Example. We had some nut case get on
air traffic control frequencies here for weeks! Yes weeks. FCC
had several people in town and could not locate the guy. The
nut case's radio signals were finally tracked down by another agency,
using techniques the commission does not possess. Sorry, I know
I am being vague on purpose. I don't want some nut to read details
here in a public forum and make it that much more difficult for the
authorities to locate him next time. Bottom line, the commission
tried for weeks to locate the guy and failed. No FCC news release
this time. They were just as glad to sweep the whole thing under
the carpet. And the outfit that found the guy is not in the habit
of putting out news releases for any reason.

Not from what you've presented here, you don't.

>I don't understand why the fanatical following of
>certain traditions.

"Fanatical following"...?!?!

What "fanatical following"...???

>10-10 numbers are "not allowed".

Unless the contest is SPONSORED by the 10-10 International, 10-10 numbers
are inappropraite in a contest exchange.

They are even MORE inapproapriate on any band OTHER than 10 meters.

>A child that doesn't know
>CW is "not good enough". The use of codewords as some kind of agreed upon
>tradition. Plus many more examples.

There are no "codewords" in Amateur Radio, Vippy.

>>Not true. Some radio amateurs in here have stated that skills developed
>>in contesting are the same skills desired in emergency communications.
>
>Searching bands and CQ for contests is not emergency communications

Being able to accuarately copy a contest exchange in weak, noisy or
crowded conditions IS developing skills for emergency communicaitons, Vippy.

Not evey contact is in "full quieting" and "arm chair copy", especially on
HF, and especially when the distant station may be operating with low power and
an emergency antennas.

>Some
>skills, like the initial setup of the station, is useful. But these are side
>effects. Not as effective as doing emergency communication practice drills.

You mean like being able to accurately copy a message from a weak station through less-than-optimal conditions, Vippy?

>Wrong. They work DX at a remote location, while others are vacation'g. They >contact others by radio at the same time others are there in person (at the >beach, for example). Not a social activity. Anti-social.

BBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAAHHA ! ! !

WHAT AN IDIOT ! ! !

Are you the only one in your blood line that is this IDIOTIC, Vippy, or is it a family tradition?

>Hams do not understand thier anti-social nature and that others may see them >as
>a cult.

If Amateur Radio is a cult, Vippy, YOU are an al-Quaeda terrorist with a penchant for child molestation and spousal abuse.

>>>AMATEUR radio should be regulated than anyone else?
>>
>> I know enough radio technology to have corporations pay me for
>> the responsibility of radio design...and many have done so.
>
>Nobody disputes that. But it has nothing to do with the question I asked.

What "questions" did you ask? :-)

Do you understand that radio physics is the same for any radio
regardless of the man-made "service" designation applied?

Obviously you don't understand that and you claim a Masters
degree in electrical engineering!

>> I don't have much information on US amateur radio of the 1930s.
>
>Yet you pontificate about pre-WW2 and even pre-WW1 radio as if you do. Tell

>us about how to build a 600,000 RPM Alexanderson alternator....;-)

I've never described "how to build" any alternators. Certainly
not at such a rate.

There is much information available on OLD radio HISTORY,
senior, and it is not found just in the archives of ARRL. You
need to get out more, see the world.

>> The 1930s' standards and practices of amateur radio continue
>> today, 70 years later, complete with the "necessity" to test for
>> morse code skills in a hobby-recreational radio activity.
>
>That's just not true, Len. The written tests of today are completely
>different.
>The code test of today is much simpler and easier than that of the 1930s. The
>application process is different, too.

Pedant. There you go, focussing on details, details, details in
order to misdirect away from the main subject.

Not only are the DETAILS different, so is the US government
agency that regulates all US civil radio different. Since 1934.
By law.

Of course the Pedantic Parson KNOWS all the intimate details
of code testing in the 1930s. He took them all then? [I don't
think so]

The running argument of the PCTA seems to be that one MUST
have direct participation in something in order to be considered
as qualified on a subject. In that context, the Pedantic Parson
would be disqualified for any history statements of 1955 or
before. Tsk, tsk.

>The tests are still given in English, though. English is a pretty old
>language.

By which US radio regulating agency in the 1930s, senior?

>> I have one textbook on 1930s radio, "Communications
>> Engineering," by Everitt, copyrighted and published 1932.
>> Interesting book, contains radio technology information that
>> was considered "up-to-date" in my 1978 ARRL Handbook.
>
>Like what? Ohm's Law? Dipole antennas?

Tsk, tsk, getting snarly and sarcastic, senior? :-)

Try Chapter 16 in William Little Everitt's text of 1932, all about
Modulation and Demodulation and the explanation of "SSSC"
(the old acryonym for SSB as used by hams). Figure 243 on
page 413 has a nice full-page block diagram of a 4-channel
common carrier communications system. Before and after

that diagram page is an explanation of relative phases of the
sideband products.

Elsewhere this 1932 text has photographs of waveforms taken
on an "oscillogram scope," now commonly called an
oscilloscope by all in the electronics industry.

>> I traded another textbook for that with a radio amateur in
>> New York state; we were both authors of different articles on
>> the same technology in Ham Radio Magazine.
>
>A defunct publication.

Tsk, tsk. Publication envy? :-)

All 22 years of Ham Radio Magazine are available on a three
CD-ROM set for $149.95 (plus tax and SHIPPING charges).

Was "Electric Radio" ever available at national newsstands
or on CD-ROM? :-)

>>>So we should ask your friends about you? What would that prove?
>>
>> It would prove you can dare venture outside Google and
>> the past.
>
>Why? You don't venture outside the past much. You keep talking about the
>1930s and your military experience of a half century ago, and on and on.

Tsk, tsk, TSK. Senior, you really SHOULD try better search
words in Google. :-)

Besides getting off in front of your computer you should get off
of that computer, use your radio, and contact the hams whose
callsigns I mentioned in here. They are still alive and still have
radios, still operate.

You haven't done that...at least not to admit you've done that.
The latter is more likely. You are here to "get" all those who
disagree with you on the screen...your virtual life is all tied
up on your computer and searching Google for "evidence" to
fulfill your "vindication" through quotes of past messages,
selectively pulled from a large collection.

>The only new
>idea in amateur radio regulations I've ever seen you come up with is wanting
>the FCC to enact a minimum age requirement so that young people under the age
>of 14 would be banned from getting amateur radio licenses.

Tsk, tsk. You totally ignored 13 pages of text submitted to the
FCC in 1999 (and public record) to focus solely on the last page
to attempt some depreciatory comment.

Bad, bad puppy. Sit in the corner.

>> I don't think you have the courage to do that.
>
>Why should I call up your alleged friends and ask them about you? Do you think
>it would somehow justify your years of hostile, abusive, belligerent behavior
>here?

Tsk, tsk, tsk. You have no social skills in interacting with strangers?
That would account for your reluctance. It's so much easier to live
a virtual life on the screen, pretend all that sage wisdom, and be
arrogant over others not subscribing to your divine opinions of How
Things Should Be.

You might try interacting with fellow gang member Heil. Heil seems
to have a pronounced lisp and could use some help in interactions
with others outside the gang.

>Here's a clue: It won't.

What won't?

>"Courage" has nothing to do with it.

No? Tsk, tsk. See the other gang member Robeson. He is
adamant about "courage" as being an almost supreme necessity.

>You cannot talk your way out of a situation you behaved your way into.

Check out your mirror positioning again, parson. The reflecting
surface is towards you. :-)

>>>You won't take the testimony of my friends about me....
>>
>> What "friends?" In here there are only Heil who calls me a
>> "horse's ass," Kellie who tries to emulate Steamy Stalker
>> by calling me "putz."
>
>And you never called THEM any names, did you?

I've never called anyone a "horse's ass" in here. :-)

I've never called anyone a "dickhead" (putz) in here. :-)

[get busy in Google now, search mightily in old, past postings...
ALL of them to make sure...:-)]

>Never insulted or ridiculed
>their education, work experience, or service to their country. huh?

Only when they did it first. :-)

Robeson continues to insult my military service to their country.

Heil has lapsed into baby talk. Roll is strangely quiet but then
he spends so much time talking about himself that any
comment about others may be glossed over by readers. :-)

>There's also folks like K0HB, K2UNK, K2ASP, W5NET, WA2SI, W4NTI, N8UZE,
>WA2ISE
>and others here whom I count as friends. We do not agree on all things,
>including code testing. Yet all of the above manage to behave in a civil
>manner here.

I'm sure you consider them close, personal friends of the deepest kind, probably for life, all united in some common purpose of brotherhood and kinship forever and ever, standing firm against oppression and the least negative comment by outsiders of your glorious service to your nation, community, and tribe.

[...did I get it all in one sentence? :-)]

"Behaving in a civil manner" applies to all. Such doesn't exempt those who ask biased, loaded questions and demand strict on-the-pedantic-subject answers. You do that as a regular thing in here, Jimmie.

"Behaving in a civil manner" doesn't mean that all ARRL words, ethics and moral statements are the ONLY correct ones while uncivil behavior is anything said against ARRL, however slight. You are guilty of that behavior and definition too, Jimmie.

You have to understand that this is a very open forum, doesn't cater to your whims, desires, or anything you favor. You aren't moderator, aren't "leader" no matter how much you post in almost constant attendance daily. You've got to accept that.

You've got to accept that not everyone is going to be strictly formal and that responses to your words of wisdom may be of a very different kind and format than you imagine they "should be." Robert's Rules of Order don't apply here.

This venue is unmoderated, open to any that have access. You can't dictate who can say what and when...the best you can do is try to wear down opposition with long, Long, LONG postings to make them go away out of irritation. You've found out that such a tactic isn't reliable, yet you keep on in the same manner. It just doesn't work for you, Jimmie. Give up on that tactic.

Expect the unexpected, roll with the punches. If you get wounded, lick the wounds and don't cry about it with crocodile tears...as you want to do from time to time.

In article <20030510104959.18769.00000567@mb-m12.aol.com>, n2ey@aol.com (N2EY) writes:

>And all of your misdirection above is a blatant attempt to avoid answering this
>question: Does your employment somehow prove that you know more about how
>AMATEUR radio should be regulated than anyone else?

I don't recall any previous professional work in radio-electronics requiring ANY serious consideration of amateur radio activities. None of my work experience was with any professional amateur radio companies. :-)

I have worked WITH several who also held amateur radio license grants. Some of those were given in here.

Amateur radios work with the same physics as all other radios. There's no distinction except in the minds of certain people who think that human beaurocracy redefines the laws of physics.

Some of my work experience has required communications by radio in various modes. That was never any problem on land, on the water, or in the air. I've done that since February 1953. I've done communications by radio in non-work related activities. No problem with that at all...all legal, too. :-)

I've had both formal and informal training and education about radio and electronics since about 1947 and that continues today. Electronics keeps increasing the state of the art in all such sub-disciplines, including HF radio where some amateur hearts and minds dwell constantly.

I've been required to study many kinds of specifications, regulations of law, industry standards, federal standards all my working life. Part 97 of Title 47 CFR is one of the smallest Parts of all US civil radio regulations, no real problem in understanding that...including the byzantine six-class structure that existed before restructuring.

At no time since 1953 was I ever required or forced to use any sort of on-off keyed morse code mode for radio communications work or recreation, on HF or any other part of the spectrum.

So, in the loaded context of Miccolis' "question," since US amateur radio still requires morse code TESTING to obtain a license class having HF operating privileges, neither my work experience nor recreational experience "fits" the OLD US

radio amateur regulations in the strict sense of the word. :-)

That really isn't the point, is it? :-)

>You avoid answering that question, for some reason.

Is my answer here "avoiding" anything? :-)

My argument was that the morse code test is old, outmoded, of
no practical value for civil radio regulation purposes, and serves
no one except a minority group of elitists in a recreational/hobby
radio activity who seem to think they are Rulers of Radio just by
passing a high-rate on-off keying code test. :-)

["Give a man an inch and he will think he is a ruler." - Anon.]

Miccolis asked a very loaded question but did not get the
answer he wished. TS. :-)

>> That license grant proved I took a tougher test than any amateur
>> radio test at an FCC Field Office at a time when there was no
>> deliberate public information on any answers.
>
>Tougher test? I don't think so. I have heard from those who took both tests
>that the tests required for the Amateur Extra at that time were tougher than
>those required for the First 'Phone.

Tsk, tsk, tsk...without taking such a test yourself in 1956, you have
NO basis for judgement. Your "logic" fails.

>You cannot know it was "a tougher test" when you did not take the tests you
>compare it to. Your logic fails.

Tsk, tsk, tsk...without taking such a test yourself in 1956, you have
NO basis for judgement. YOUR "logic" fails, flounders, and is
"stuck on zero" (prompt from early automated digital logic testers).

>What you're trying to sell us is the idea that your passing a single test for
a
>COMMERCIAL license many years ago somehow proves that you know more about how
>AMATEUR radio should be regulated than anyone else. No sale.

That wasn't offered for "sale." :-)

What you are attempting to prove in here is that any commercial radio
license test is inferior to any amateur radio license test. No sale.

What you are implying is that "tests" represent a summation of
knowledge of the examinee AFTER the test was taken. That is most
assuredly false, ludicrous, and a bit insane. "Tests" represent only
the knowledge of test subjects by examinees BEFORE the test was
taken.

Absolutely NO "test" is required to see the arrogance and self-
righteous indignation of certain individuals who insist that Their

testing in anything showed their "superiority" to any who did not
take the test. Their "superiority" is a definite NO SALE.

>There you go, living in the past and its standards and requirements.

I'm in an arena of amateur radio policy arguments where the
standards and practices of 1930s amateur radio represents the
norm for the 2000s according to some olde-tyme hams. There's
no avoiding those, such as yourself, who demand living in the
standards and practices of 70 years ago. :-)

>How does your passing such a license test so long ago somehow prove that you
>know more about how AMATEUR radio should be regulated than anyone else?

How does your passing an AMATEUR radio test so long ago
prove you are judge, jury, and executioner qualified to speak
of policy in amateur radio TODAY? :-)

You will claim something like a long tenure as a licensee and
being "active on the air" as your qualifier. :-)

You ARE, therefore you Rule. :-)

No sale.

<snip of long-ago public posting in here omitted>

>But the amateur radio experience of an active radio amateur DOES exceed the
>experience of any unlicensed person. In other words, us licensed, active hams
>have experience, knowledge and skills about AMATEUR RADIO that you do not,
>Len. That's a plain, simple fact.

No, that's just a self-righteous, self-important CLAIM.

If your CLAIM had any merit to the FCC, or even to the government
elsewhere, you should be the supreme arbiter of all who may
exercise their First Amendment Rights on US federal law.
You aren't. You do NOT Rule.

Your CLAIM only has merit in the closed-loop inbreeding of
fraternal groups whose members think alike on their own
self-importance. ARRL is such an organization.

Despite your CLAIMS of "experience, knowledge, and skills
about amateur radio," YOU are not sitting in policy-making
in the FCC nor in any enforcement office of the US
government. YOU are just venting a cloud of frustration and
pique for not being able to Rule and are unrecognized for
the greatness and glory of your words of wisdom.

What's worse, the FCC's opinion on morse code testing for
US amateur radio license examination is not in agreement
with all your claimed "superiority" in amateur radio.

All the other PCTAs seem to feel the same way and are
whining about it through attempts at insulting all those who
aren't PCTAs.

>> But, I've never been so obsessed
>> with any particular message arguement to carry sore losing to
>> such great lengths as:
>>
>> 1. Creating a special Home Page on an ISP deliberately
>> designed to libel one individual so severely as did Robeson.
>> That was an outrageous, sick act on his part.
>
>In your OPINION. Someone else would think it was funny. Me, I think it was in
>bad taste.

Awwww...really? I'll bet you were hopping up and down with
happiness on seeing it...vicariously enjoying "vindication"
for non-agreement on morse code testing in the newsgroup!

:-)

>Besides, that was over FOUR YEARS AGO, wasn't it? You live in the past too
>much.

I'm not the one touting B&W products of the 1950s.

I'm not the one touting morse code "superiority" after it
began in commercial service in 1844.

I'm not the one demanding all amateurs to adhere to
the standards and practices in amateur radio as it
was in the 1930s.

I'm not the one constantly going back to dear old
GOOGLE to pull out old messages and try to beat
dead horses of past arguments.

You have your mirror reversed still...

>> I can "take it" to the extent of having an attorney file for a civil
>> court lawsuit on grounds of libel. I can afford such things as
>> attorney fees for a protacted period. Such a lawsuit would be
>> almost a cakewalk since prima facie evidence of libel was
>> clearly evident that ANY AOL subscriber could view; there are
>> (and were then) millions of AOL subscribers. AOL would have
>> lost, without doubt. So would Robeson. In Robeson's case
>> such a financial loss would have been severe in both time and
>> money.
>>
>Sounds like you are threatening him.

Awwww...gosh, I didn't let a "superior" ham run amuck with
his petty libel!

How "threatening" of me! Terrible!

Tsk, tsk, tsk...the grant of an AMATEUR license does not
exempt anyone from statutes on libel or slander. Why do
you think it does?

>Here's a hint, Len: I'm not him.

No? Aren't you a Band of Brothers or something?

Is the Gang of Four having a falling-out in here?

Quick, someone call Newsline! There's a STORY
brewing! Paging Pasternak...paging Pasternack...

>You might note that I have repeatedly pointed out that his name-calling and
>other antics simply lower him to your level.

Oooooo! :-) :-) :-)

Are you changing from the Pedantic Parson to "Buffy,
the Vampire Slayer?" :-)

Can this be a lead-in to another Sermon on the Antenna
Mount?

Stay tuned everyone...Parson will return in 3 or 4 years with
all these words cut-and-pasted from Google! Bank on it. :-)

>'That's all very nice and dramatic but wasn't it the United States Army where
>you learned all that? The same US Army that gave you food, lodging, shelter,
>and free clothes, medical care, and training as needed? The same US Army
>that taught you radio electronics theory and practice? It wasn't amateur radio,
>was it?

You are mostly WRONG, senior.

Military radio communications is definitely NOT amateur radio.

But, you can't know that in any way from personal experience, can you?

The US Army taught me the BEGINNING of radio and electronics knowledge I've acquired, despite already knowing the basics before joining the Army voluntarily.

>Len, the time for demanding Medals for Meritorious Service in
>the US Army is past for you.

I got my Good Conduct Ribbon in 1955. That was good enough for me at that time. :-)

I got an Honorable Discharge in 1960. No preceding "medical discharge" that later became "honorable." :-)

>That was not amateur radio, it was PROFESSIONAL radio.

I'd call it MILITARY radio.

The job also required being able to "close with and destroy the enemy."

I was many years in regular hours of employment in professional electronics and never heard of anyone killing competitors. :-)

>I'm sure that the US Army did
>not put you on watch if you couldn't cut it.

How can you possibly be "sure?" You've never served.

Are you on some advisory panel on US Army doctrine and training as a civilian?

How can you be so "sure?"

>I don't see how
>all that makes you some Number One Ichiban HAM Honcho NOW.'

I don't claim to be that, never have. :-)

I'm just advocating the elimination of morse code testing for
any US amateur radio license examination.

Somehow you've worked yourself up into some mighty morse
lather and want to damn anyone for even suggesting that
the morse code test be eliminated.

>No, it's because of the way you show no respect for others' service.
>Including Vietnam veterans and career State Department employees.

Heh...it's true I don't have a lot of respect for the ENTIRETY
of the US Department of State and US foreign policy.

If ANY veteran of ANY branch of ANY military tries a snow
job in here or makes a lot of vapid vague generalities of any
sort of mighty military "experience," they should be a target
for veteran to practice some live fire.

Try to firm up the when and where of "seven hostile actions"
claimed by the character assassin in the Gang of Four.
He hasn't done it yet.

Talk some baby-talk to Heil and ask him which unit and what
duties were performed while IN Vietnam when that country
was at war. He hasn't done that yet.

Go back to Google and find the identity of the "colonel whose
son was behind enemy lines sending intel by CW" in the
first Gulf War. Snow job, bullshit, fish-story stuff. I could
care less whether that braggart and storyteller was a Real
veteran or not. Such nonsense posted in public doesn't
deserve a single atom of "respect."

We could get to YOU and all your "respect" for my service to
my country, but that wouldn't look good on you, would it?

Go live in Google among all the OLD newsgroup messages.
You love that stuff, apparently. Continue to beat the dead
horses. It seems to be a catharsis for your frustrations.

You are a veteran of amateur radio and fought the code
wars. Demand "respect" for all that fighting. In that
virtual reality you can be as mighty as anyone. Who
knows, you might even earn a morse medal for valiant
service and gallantry in battle! :-)

>Sounds like a threat. Is that how you resolve conflicts - cuss at the person
>and attack them physically? If you met me in person, would you do that in
>response to my words of disagreement?

Why, are you worried? :-)

Why do you feel "threatened?"

>Is it "brotherhood" that is evidenced in your posts here to other veterans,
>many of whom served our country much longer than you did?

They aren't worthy of brotherhood if they lie and make up
fish-stories about that "service."

Here's two examples:

"You are a horse's ass" stated by a veteran whose only
given information about miltary service was that he was
"in a country [Vietnam] at war." Written just recently by
someone who lapsed into lisping baby-talk.

"Putz," said many, many times by a foul-mouthed veteran
who claimed "seven hostile actions" in his life experience.
No when or where or any other clue, just "seven hostile
actions."

>Your beefs with K4YZ detailed above are even older. You live in the past too
>much.

I don't have any "beef" with that mental case. He is a US
amateur extra class ham. He is representative of US
amateur radio of today.

If you bother to look at subject headers you will see his
on-going insult postings continuing as of 10 May 03.

>Doesn't answer the question. Your double standards keep getting exposed. Too
>bad.

What "question?"

Did you ask me if I still beat my wife or something like that?

>I see that I have over estimated you, Len.

Here: Bird. Flip.

Enjoy.

>And it got there so close to deadline that nobody could reply before January
>15.

Tsk, tsk, tsk...your arm must get very tired beating that dead
horse. :-)

So...did that deadline date stop anyone from commenting about
anything in regards to NPRM 98-143? :-)

I don't think so. :-)

>> Many others filing comments were marked as received on the

Seems to me that it's the FCC that dictates the use of the
frequencies, not the the various elitist net groups that figure they
hold claim to a given frequency and tend to camp out and monopolize
the use of said frequency.

779. Q's (more of them)

Newsgroup: rec.radio.amateur.policy
Date: 2003-05-11 01:29:02 UTC
From: cmoressi@cs.uiowa.edu
Message-ID: <df510dbe.0305101729.7171a861@posting.google.com>
Source record: 66927

Thank all of you who replied to my previous message about the amateur radio exam. I have couple more questions if you don't mind.

1. I remember someone telling me that there is a broadcasting of Morse code on one of the ham bands so that people could practice their Morse code. I was wondering if someone could give me the name of the station so that I can get more information about it. I would like to build/buy a radio that picks this frequency up. Ideally I would like to find some schematics on the web for a receiver.

2. Reading through the ham news groups, I noticed that SSB is used very often. I was wondering what type of filters are typically used for signal detection for these modes. Granted, the noise would be similar to that of both the sidebands lumped together, I still am confused about how the transmitter and receiver are synchronizing. When operating on SSB, do you notice a sound quality difference in comparison to regular AM operation?

Thank you!

-Chris

Ryan:

If you're looking for a high quality, reliable, durable, and long-lasting
compact automobile with peppy acceleration and excellent fuel economy,
then look no further than the Toyota Corolla! My 2003 Toyota Corolla LE
gets 32 MPG in combined city/highway driving, and that's with an
automatic transmission! My previous '01 Corolla with a 5-speed used to
get a couple MPG more.

Read more about Corollas at www.corolland.com. Click the link to the
Owners Forum where you'll find the musings of yours truly, among others.

>edge.

Mike:

The term "obese" means that you are more than 30 lbs. above "normal"
weight for your height and physical characteristics. Obese people know
who they are -- they look fat. They are not the least bit athletic. Moreover,
they have dangerously high cholesterol, blood lipids, and blood pressure.
If you are quite active, it is hardly likely that you would even be close to
the definition of "obese."

>Yet my wife, who lives on a diet of Nachos with the works, has
>never carried over 115 lbs on her 6 foot frame.

Now, your XYL is another story altogether. An adult woman who is
6 ft. tall and only weighs 115 lbs. should definitely consider a much
more nutritious diet than "nachos with the works." I'll bet I could suggest
a diet that would 20 lbs. on her without even trying.

> People should not be obese. But sanctimony only provees the prejudice
>of the sanctimonious.

Whatever. If my opposition to the behavioral patterns which lead to dangerous
obesity is being "sanctimonious," than so be it.

Chris -- W1AW, the ARRL station in Newington, CT sends Morse code practice and Bulletins -- see URL:
http://www.arrl.org/w1aw.html#w1awsked

Any modern SWL receiver with a good antenna will pick up W1AW. Frequencies are: Frequencies are 1.818, 3.5815, 7.0475, 14.0475, 18.0975, 21.0675, 28.0675 and 147.555 MHz.

SSB detection usually employs a product detector. Filters narrow or pass a bandwidth not detection. For how SSB works -- see URL:
http://www.williamson-labs.com/480_ssb.htm

Ham transmissions on the HF bands are usually half duplex. One station transmits (can not hear the other station while transmitting) and vice versa. Not like a telephone which is full duplex. Thus the "Over To You" protocol.

By circuit design, the same circuits that receive are used to transmit up to a point. So a modern transceiver is always on frequency for receive and transmit. Or as you asked (how the transmitter and receiver are synchronizing).
A very simplified block diagram showing the common receiver and transmitter circuits can be seen at URL:
http://www.flashwebhost.com/tcvr/block.php

The product detector follows the 2nd mixer and uses the BFO to re-insert a carrier for demodulation. SSB is Single SideBand Suppressed Carrier, so we have to re-insert the carrier at the receiver.

The quality can be better than AM due to the narrower bandwidth -- thus better signal to noise ratio. But the signal audio is usually in the range of 300 to 3kHz -- not hi fi by any means --- merely "good communications quality".

For some good books on all this see URL:
http://www.arrl.org/catalog/
Search for ARRL Handbook

For once I have to agree with you. In '86 I got an '85 Corolla
with 20K miles on it (lease return) and drove it for 9 years,
putting 170K of my own on it. Got 30+ mpg and even had a GOOD
recessed place on the dash above the heater controls where the
clock was 'sposed to go which just fit the control head for my
ICOM2730 dual-band mobile rig. No major repairs other than the
normal brakes, shocks, tuneups, battery, and tires.

I'd still be driving that car today if some yo-yo truck hadn't
rear-ended me while I was stopped at a traffic signal. None of
my subsequent cars ('90 Plymouth, '96 Chev Caprice) measured up
to that (nor had a good place to mount that control head).

In article <20030510130226.13740.00000181@mb-m28.aol.com>, k4yz@aol.com (Steve Psychotic) writes:

>>I know enough radio technology to have corporations pay me for
>> the responsibility of radio design...and many have done so.
>
> And some decided you weren't worht the expense and let you go.
>
> Abruptly.

"Worht?" :-)

Which employer "let me go?" How "abruptly?" :-)

You have my resume posted in here. Feel free to contact their personnel departments to ascertain such stated charges.

RCA Corporation "let the whole EASD go" in Van Nuys prior to the corporate sale to General Electric. Wasn't "abrupt" but took place over a two-year period.

Sorry, poor boy, you won't find any firings or other "abrupt" dismissals on my work history.

Can we all say the same about yours? :-)

> Uh huh...Lennie thinks it's OK to SPAM e mail, however when he get's HIS
>feather ruffled (the result of which was to an item he initiated) he goes
>whining to AOL about "libelous" web pages.

Tsk, tsk, tsk. AOL agreed with me on the home page. :-)

What "spam," little boy? You wanted to see my phone license scan. I sent you several copies. You refused to look at them.

Strange behavior.

> Two faced cowardly putz.
>
> Excuse me..that wasn't correct...Tow faced cowardly LYING putz.
>
> There...that's better.

"Tow faced?" :-)

I just love the double standard of PCTA civility in here. :-)

> You alleged in this forum that you did NOT send a photo with an unknown
>person exposing himself. That was a lie. I "exposed" you for what you were.

The accidentally-sent image was a picture of a converted
B-26 water bomber in flight over a forest area. One of the
crewmembers is mooning the camera plane in the nose.

"Exposing himself?!?" :-) :-) :-)

It was funny to anyone with a sense of humor.

Poor boy...tried to do an "exposure" and nothing developed.

AOL didn't think Robeson's "exposure" was decent. They
tossed the home page, erased your new screen name, and
sent you a warning note.

Tsk, tsk, tsk...bad puppy, go sit in the corner.

> Of course you ALSO allege to being an electronics "professional", having
>been paid for your engineering and consulting skills.

I've been and still get paid for electronic design engineering skills
but I've not done any direct consulting in electronics. I've done
consulting work in another field. Money is money and some jobs
are fun to do. :-)

> Those were lies too, methinks. If you can't send a simple e mail and get
>it right, how are we to accept that anythig ELSE you allege is accurate?

Tsk, tsk, tsk...everything not to Stevie Psychosis' liking is a
"lie." Bad scene Stevie, you are unbalanced.

Try to get some mental help soon...from a real MD, not from the
contents of a hospital medication cabinet.

The above is what Miccolis condones as "civil behavior?" :-)

>It'd be just as easy to dimiss any of your friends, Leonard. I figure
>that the opinions of anyone who claims you as a friend can't be worth
>that much.

More PCTA "civility?" :-)

>Accepting it isn't the same as acting positively on it. You wrote. The
>FCC accepted. You aren't writing your material here for the FCC. I
>don't have to accept it. I don't have to take it seriously.

You don't take it. You can't take it. :-)

>My forty years experience in amateur radio certainly qualifies me to
>know more of amateur radio matters than an individual who has no
>experience in amateur radio. You'd be a fool to argue the point.

You are a god of ham radio.

Radio gods insist on keeping things to their divine liking.

>You're simply blowing smoke. You're blowing smoke about your ability to
>pay an attorney for a "protracted period". You're blowing smoke about
>cakewalks, prima facia evidence, about AOL and "Robeson" losing "without
>doubt". Did you forget about the existence of all of your past posts at
>Google? A smart guy would load up on all of that material.

Not a problem. AOL removed the libelous home page.

Honorable thing to do. I accepted that.

You can't accept honorable things...unless they honor you. :-)

>This medium is archived. Those archives remain intact. Thousands of
>individuals may easily access those archives and print as many copies of
>each post as they desire. Those printed copies may remain intact.

Wonderful. Stalk intentions? :-)

Blackmail? Some form of coersion to comply with radio gods?

>Len, ever since I began reading this group, you've been rude and
>uncivil. You've been doing the demeaning and the insulting and you've
>gotten back what you've dished out. You're an unpleasant man.

Tsk, tsk. Radio god holding his mirror wrong again, reflecting
himself. :-)

I do not worship false gods, nor respect them. You are one.

>The laughter wasn't stifled this time. No one was critical of what you
>did in the military.

Sure they were. Can't you navigate Google properly? :-)

>A number were critical of the way you attempted to
>puff your activities.

"Puff?" Nope. Straight stuff.

I gave all details of my assignment, unit, duties, dates.

Heil just said he was "IN vietnam." No other details of unit,
duties, etc.

Looks like Heil is doing the "puffery," revealing nothing of
substance. :-)

>Remember, Len. You've described this medium as a 2/47 street fight
>where anyone may post whatever he wants. You don't suppose anyone is
>being forced to read Jim's material do you? Are you being forced to
>read it or forced to respond to it?

Tsk. I wrote "24/7."

Nobody is forcing you to respond, are they? :-)

Is one of those noisy 4-wheeler drivers forcing you to post?

>So that we're clear on this, you don't believe that anyone who never
>served in the military and who knows morse code doesn't know much about
>sex?

Aren't you guilty of a slight exaggeration, god of radio? :-)

>Apparently you were in the military during a special period. There were
>drunks, drug addicts, psycopaths, liars and thieves in every outfit in
>which I served in the military.

Was that the United States military? You sure? :-)

>Sure he is in a position to judge. I read it and judged it too. It
>makes you look rather foolish.

To hang around in here with PCTAs who served with drunks,
liars, thieves, etc. IS rather foolish. I agree. :-)

>Lennie boy, are you Getting Your Way in amateur radio regulation? Is
>that the reason for your vitriolic posts?

Vitriol? Is the god of radio displeased? :-)

Does the god wish all to bow to his divine majesty? What?

>It is obvious that you have nothing better to do.

Have you seen a real MD about your condition...or psychosis?

Here, have something for your condition: Bird. Flip.

Enjoy.

Poor baby. So difficult for you to read? Have you sought the help of an eye specialist?

50 years can accumulate a lot of experience. You only have 47 years. Tsk, tsk. Do we hear envy in there? :-)

> And THAT was just about whom he claimed to have worked for and alleged
>accomplishments.
>
> I poked holes in it with just one phone call to Pennsylvania.

Did you use a sharp-ended handset? :-)

Did you use the same bayonet you had for those "seven hostile actions?" :-)

> In contrast, I HAVE spoken with people who knew Lennie from a
>"professional" relationship. While not driven to the use of profanities or
>vulgarites, they didn't have anything GOOD to say about him either.

Of course you did...conversing with the voices in your head!

:-)

> To be factual, Jim, I used the word "cowardly" in respect to his attempts
>to embellish his military "career" by associating himself with Army KIA's that
>died 3 years before he got there and hundreds of miles away.

Didn't you forget "putz" and "creep" and some others? :-)

Yup, honoring some signalmen of the same signal battalion
is "cowardly" in Robeson's mighty warrior eyes.

Tsk, tsk...I don't fault the USMC from booting him before his
"twenty."

> I did NOT say his duties in the Army were "cowardly". That's a
>LennieSpin.

Sure you did...go back to the "rear area radio clerk" labels.

While you're at it, fill us in on the WHEN and WHERE of those
"seven hostile actions" you were in?

Or are those all so classifed that you can't talk about them in
public? :-)

> Yes...1.2 million mesages that HE passed. That was his ORIGINAL message.

Tsk, tsk, tsk...you are editing what was originally stated,
aren't you? No problem, your Gang buddy Miccolis is right
now cutting-pasting-and-editing from Google. Saves you the
effort. :-)

> Of course once everyone with a 7th grade reading comprehension smacked
him
>around for it, he recanted THAT version and started in on the "we were part of
>a TEAM" spin.

Never said otherwise. An entire signal company to keep just a
transmitter site working 24/7. Another signal company kept the
receiver site working 24/7. That's about 250 personnel in an
Army signal company at the time.

It's too bad your reading comprehension has not gone higher
than 7th grade. If your community has night school classes
in such subjects, it would be worthwhile to take an English
Reading and Comprehension course on your free time away
from all that hospital work.

> Lennie's (and now Vippy's) conduct does for professional electrical
>engineering what Lennie claims we do to Amateur Radio...Only he does it with
>profanity, name calling, etc.

When in the company of those shouting "horse's ass" or "putz, creep,"
etc., one has go with the flow. :-)

> Now Jim...you wouldn't expect Lennie to be able to produce anything
>FACTUAL, would you?

You two ought to make a pact and go live together in Google. :-)

Mortgage free, all debt free, no liens, no problem.

No "4-wheelers" up at the Kitsap County house set in quite a
ways from the highway on 10 acres. None down here in the
22 feet of driveway in Los Angeles County.

Are those "4-wheelers" causing RFI? Call the FCC. Call
Ed Hare. ARRL is your friend. They are there to help. :-)

From your comments to Steve, it is apparent that you do not understand.

> I don't understand why the fanatical following of
> certain traditions.

Why do you place the word "fanatical" before "following of certain traditions"?

> 10-10 numbers are "not allowed".

If one is operating Sweepstakes, for example, pausing to exchange 10-10 numbers is a complete waste of operating time. I find 10-10 number exchanges outside of a contest to be a complete waste of operating time. You might as well exchange zip codes.

> A child that doesn't know
> CW is "not good enough".

That'd be particularly true if the mode in use was CW.

> The use of codewords as some kind of agreed upon
> tradition. Plus many more examples.

You might use one of the many more examples. The one you've used is quite weak.

> >Not true. Some radio amateurs in here have stated that skills developed
> >in contesting are the same skills desired in emergency communications.
>
> Searching bands and CQ for contests is not emergency communications.

See, I told you that you don't understand contesting. If you think "searching bands" and "CQ" is what it's about, you have much to learn. Copying the exchange information correctly at high speeds through QRM or QRN is certainly the kind of skill which is useful in emergency communications. The knowledge of which band is likely to be open to a given area at a given time of day or given season of the year is the type of skill useful in emergency communications.

> Some
> skills, like the initial setup of the station, is useful. But these > are side effects.

It is again obvious that you have no idea what you're talking about.

Vipul, this is like trying to explain NFL football to a bushman.
Hams communicate with other humans, not with robots. Hams attend
hamfests, club meetings, engage in public service work which puts them
in contact with government officials and with the general public.

> >> ARRL olde-tyme ham Beliefs are not of the divinity nor are they
> >> some form of Universal Truths however self-evident to Believers.

Why should he? We all know that:

"No matter what job, educational level, employer, or government/military service that a radio amateur has, if said radio amateur opposes Mr. Anderson's views, he/she will be the target of Mr. Anderson's insults, ridicule, name-calling, factual errors, ethnic/racial/religious slurs, excessive emoticons and/or general infantile behavior."

Fcc came in town here looking for college students operating
an unlicensed FM station. Fcc's arrival was announced and
tracked on CB, ham repeaters, FRS, etc. for the entire time
they were here. How? The Fcc people wore hats and other
clothing with Fcc logo and used government credit cards while
they ate breakfast at local motels, gathered in motel lobby, local
restaurants, bars, etc. Fcc's own comms were monitored, both
their electronic comms and their conversations in local
businesses. Fcc vehicles were easily identified and tracked,
despite not having any markings. When Fcc returned to their
motel for the night, the FM station came on the air taunting
them. As one local said, it made you wonder if the Fcc was

here to do some serious hunting or just to collect perdiem
and overtime pay while having an out of town fling.

> discharge" that later became "honorable."

You keep repeating this, Lennie, but at no time was a "medical" discharge
anything LESS than Honorable.

You have been tasked to back this up, yet continue to resist doing so.

Again you've been caught lying. Why do you persist in lying?

>>That was not amateur radio, it was PROFESSIONAL radio.
>
> I'd call it MILITARY radio.

Congratulations. That's what we'd cal it too.

And other than the physics of radiowave propagation, it has nothing to do
with AMATEUR RADIO, a topic which you continue to try and link.

>The job also required being able to "close with and destroy
> the enemy."

Hmmmmm....Nothing in any era-specific radio clerk training manuals say
ANYTHING about "closing with the enemy".

>If ANY veteran of ANY branch of ANY military tries a snow
> job in here or makes a lot of vapid vague generalities of any
> sort of mighty military "experience," they should be a target
> for veteran to practice some live fire.

Too bad those of us with REAL military experience in REAL combat can't use
that live ammunition on cowardly liars such as you, Lennie, who misrepresent
their own military service by hiding behind KIA's they never knew or served
with.

You may try to spin the servie records of ANY of us, Lennie, but YOUR
misdeeds at the expense of KIAs is archived here.

You ARE a liar.

>Try to firm up the when and where of "seven hostile actions"
> claimed by the character assassin in the Gang of Four.

Go read the FCC rule book. Broadcasting for the purposes of training is
legal as is news specifically on the topic of amateur radio. But the
requirements are strict.

The ARRL does put out such broadcasts on the ARRL station W1AW. Here is the
URL for details and a schedule.

http://www.arrl.org/w1aw.html

From K4YZ:

> What have you presented here that "we" didn't already know about?

Hams do not know others view them as a cult, nerdy, anti-social, older person, overweight male hobby. Electronic hobbyists view them as non-technical (except for antennas).

Possible activities include radio direction finding, which Hams know about, but do not participate in. Also, Hams can use other skills besides CW.

>> A child that doesn't know
>> CW is "not good enough".
>
>That'd be particularly true if the mode in use was CW.

The child said that before the other child got to operate the station. The contest had both HF phone and HF CW modes. I operated HF phone mode.

>Copying the exchange information correctly at high speeds through QRM or
>QRN is certainly the kind of skill which is useful in emergency
>communications.

In the contest, you know someone will be there since it is a contest. Also, this is one skill that happens to overlap. Contesting is a game, not a drill. The focus is to collect contacts, not emergency communications. This is weak correlation and you know that.

>> Hams do not understand thier anti-social nature and that others may
>> see them as a cult.
>
>Others? You mean you? I see you as a one man cult, Vipul.

When I said that I was a Ham to a non-Ham, he asked me if Ham radio is some kind of cult, and if they still used Morse code. Seems like some non-Hams can see their cult-like nature.

I would've _thought_ that, in a situation like that, FCC would make
that call after less than 48 hours of failure; agency pride getting in the
way?
And why would FAA put up with it?

The someone who told you this was misinformed -- see Part 97.111 of the FCC Rules which states:

b) In addition to one-way transmissions specifically authorized elsewhere in this Part, an amateur station may transmit the following types of one-way communications:

(1) Brief transmissions necessary to make adjustments to the station;
(2) Brief transmissions necessary to establishing two-way communications with other stations;

(3) Telecommand;

(4) Transmissions necessary to providing emergency communications;

(5) Transmissions necessary to assisting persons learning, or improving proficiency in, the international Morse code;

(6) Transmissions necessary to disseminate information bulletins;

(7) Transmissions of telemetry.

Sure was.....well its over now....According to the last ARRL bulletin
anyway. So now the malcontents and Wilky can get back to normal....whatever
that is.

Go to www.arrl.org and look up W1AW operating schedule.
>
> 2. Reading through the ham news groups, I noticed that SSB is used
> very often.

Yes SSB , either Upper or Lower is used most of the time for voice.
Although in some area's of HF there are still AM stations quite active.

Again check on ARRL for the various 'bandplans' for the frequencies to
check.

I was wondering what type of filters are typically used
> for signal detection for these modes. Granted, the noise would be
> similar to that of both the sidebands lumped together, I still am
> confused about how the transmitter and receiver are synchronizing.

Depending on the technology/age of the receiver you will find crystal
filters and/or DSP used mostly.

> When operating on SSB, do you notice a sound quality difference in
> comparison to regular AM operation?

Yes. Unless 'enhanced' by dubious techniques a 'normal' sideband signal
will be a bit 'pinched' (higher pitched sound) than a AM signal. This is
mainly due to design of both rx and tx equipment and the reduction of
bandwidth when using ssb.
It is not unpleasant to listen to if properly adjusted both in rx and tx.

You are the first and only person I have ever seen refer to ANY of Amateur Radio, in particular or in general, in that regard.

Amateur Radio is not a cult. You are the only person I have EVER seen refer to in that context. If you can provide a link or URL to some site that proves your asserion otherwise, please do so now. Otherwise, please accept my most unhumble opinion that you are a narrowminded idiot making this stuff up to be antagonistic.

And "nerdy? I guess that's why they invented the term "egghead" for Amateurs...OH! WAIT! That was for computer ENGINEERING types!

Excuuuuuuuuse me!

>(except
>for antennas).

Oh? I can name about a half dozen electronic and "science" related publications that contradict you, INCLUDING some "industry" periodicals. Again, please provide a link or URL, otherwise accept my unhumble opinion that you are making this up for the sole purpose of being antagonistic.

>Possible activities include radio direction finding, which Hams know about,
>but
>do not participate in.

Stupid, Vipul. Really stupid, in light of recent coverage of US participation in INTERNATIONAL RDF competition.

>Also, Hams can use other skills besides CW.

They do...In droves. Myself included. You've just been too wrapped up in your own rhetoric and storytelling to know where reality starts and YOUR fiction ends.

Again, you are asked...What is it you are trying to tell us about Amateur Radio that WE didn't already know about?

So far you've made yourself appear an even bigger fool than you already were by reciting your previously disproven assertioons about Amatuer Radio.

Now, do you have anything CONSTRUCTIVE or ENLIGHTENING to suggest or offer...?!?!

I have mentioned ham radio to many non-hams. NONE ever asked if it was some kind of cult. The commonest response that I've heard is "Is that like CB?". A few have asked me if they still used Morse code but not one ever made any comment or indication that they considered that cult-like or undesirable in any way or that it gave them a bad impression of amateur radio.

>correlation and you know that.

The "weakness" is in your attempts to spin this your way.

It's not just a matter of making contacts. You are up against a deadline
to make a certain number of contact ACCURATELY. Inaccurate contacts mean
either no points, or worse yet, points deducted for logging improperly copied
or erroneous exchanges.

And what >>I<< know is that Dave Heil has over two decades of experience
in just those venues while you have, at the most, a couple years.

And so far your mouth has laid bare your glaring inexperience in
contesting, emergency communicaitons AND Public Service.

>When I said that I was a Ham to a non-Ham, he asked me if Ham radio is some

Since Vippy the Vile (VShah101) insists that Amateurs only like to eat and conduct cult rituals, just thought I'd provide yet another reference that disproves his stupid rants.

The following is a lead story from the ARRL Web Page. Go to www.arrl.org "For the rest of the story..." (with apologies to Paul Harvey...)

BEGIN QUOTE

From Inspiration to Service

By Bernard L. Malone III, KC5RX
May 10, 2003

How one ham's thoughts on fox hunting helped kick off an industry-wide effort to save lives at the World Trade Center site.

On the morning of September 12, 2001, I woke up to television news reports that immediately made me recall events years earlier. Back around 1994, I was living in Shreveport, Louisiana and was an active member of the Shreveport Amateur Radio Association, SARA. I participated in many club activities including Civil Defense training and the disaster preparedness drills. Like many clubs, fox hunts (hunting for hidden transmitters) were conducted once or twice per year. As many hams know, these are a lot of fun and provide hands-on training in many subject areas.

END QUOTE

Remainder of the story is on the ARRL web page...

>from the electronic hobbyist person's and social aspects view.

No, you're doing it from your point of view. Your point of view includes things like defining words differently from how almost everyone else defines them.

>I'm just trying to point out Ham radio how others may see it.

If so, you're doing it in a way that makes most of the people who read your stuff disagree with you. In fact, you're so skilled at it that some people are beginning to think the reason you post here is to stir up disagreement.

I could be wrong about that, of course. I'm no expert.

But if everyone else calls a cheese sandwich a cheese sandwich, and you call a cheese sandwich a 2N2222, confusion is bound to happen.

Which reminds me - lunchtime. Two pieces bread, one slice cheese, quick zap in the toaster oven.....

Most non-Hams do not know enough about Ham radio, so they would not call it a
cult.

Also, relative confused Ham radio with CB too. He said "breaker breaker". I can
understand why some would confuse Ham radio with CB. Prob is that they do not
know that one can xperiment, use a variety of modes, or do emergency comm, or
public service events though Ham radio.

More publicity for Field Day would help this. So far Field day not advertized
well to the public. Only those that already knew about it seem to attend.

I was going to do a synopsis, but you did a much better job, Dave.

Allowing the possibility that I was wrong about my thoughts on his hatred of Ham radio, I googled all his newsgroup posts. This resulted in pretty much what you have here.

So after some thought about why there is such a different perception of the ARS between say, most of us here, and Vipul, I came to the following conclusions:

1. He has a tendency to base his conclusions on insufficient input.

This isn't too unusual. Many prospective hams are scared away by a crank or two they meet. There are annoying people in every hobby, service, sport, whatever. Get over it. Prejudice won't get anyone anywhere.

There are obese Hams. Hams are not obese.

There are old Hams. Hams are not old.

There are White Hams. Hams are not all White.

There are Male Hames. Hams are not all Male.

I could go on forever.

or.............

2. He enjoys baiting Hams. That sounds like a troll

My club does every activity that you say Hams don't do. Unfortunately,
Doppler direction finders are so easy and inexpensive to make now that
RDF is annoyingly easy.

In an emergency you know someone is on the other end also, unless you
know another way of doing this sort of thing.

Yes, contesting is a game. But it trains you quite well for all the
things Dave mentioned. It isn't a weak correlation at all. There are
thousands of stations in a large contest. Any one of these might be
called upon if an emergency were to happen. Thing is, the random and
localized nature of most emergencies means that only a few stations will
be in use for any given emergency. And I can tell you from experience
that it trains you to be a better listener and to increase your ability
to pull a weak signal out of the noise. My ability has increased
tremendously since I started contesting.

Here's an idea. Since you think contesting is so strange and boring,
why don't you propose some kind of event that will train large numbers
of Hams in emergency comms?

Note that W1AW is not the sole source of Morse practice transmissions. In
some areas there are sessions on local repeaters. Try asking around in
your area.

As for the differemce in audio quality between AM and SSB, all else being
equal on SSB the audio will be cut below about 300 Hz, and on AM the bass
response will extend lower. This is because doing so on SSB yields a
slight reduction in bandwidth and a corresponding reduction in background
noise, whereas on AM it wouldn't. The other differemce is that on SSB

anything more than a few tens of Hz error in tuning will cause audible distortion, and on AM there is no such effect. With practice, however, it is not hard to tune in an SSB signal sufficiently accurately to be undistorted. You will develop an 'ear' for it.

So why do we use SSB? With AM, 3/4 of the power is wasted in the carrier, which carries no information, and a further 1/8 in transmitting a scond sideband the same as the first one. So, a typical 100W HF SSB rig is equivalent to 800W of AM, and the US legal limit of 1,500W is equivalent to 12kW of AM, which would be more than most US AM broadcast stations. Not only that, but the bandwidth of SSB is (less than) half that of AM, which is worth a further doubling in power.

There are a few people still using AM, but they are mostly enthusiasts for older rigs. There is nothing wrong with being into the ham equivalent of a Model T Ford, but you can't expect it to perform like a new Ferrari.

Sorry, I don't do public service because:

I am too busy and in transition. Now that I am no longer an EE, I feel more relaxed and this will help me contribute to public service.

This may be considered selfish. I dont want to be selfish. Its just how it worked out.

Also, public service takes work. I recycle as long as it does not take too much effort.

Also, I don't know about many ways to do public service.

Our club does its field day in the middle of a very popular
county park, and there's one or two club members there whose
role is to explain things to passers-by. We have big signs
with "Club Name - Field Day" on them.

What could be more visible than that?

Nonsense. If they're serious in their desire to design circuitry for
HF applications, they can always apply for a Part 5 Experimental Radio
Service license from the FCC. There are certainly engineers employed
by Yaesu, Kenwood, Icom, et al, who do not possess amateur radio
licenses yet turn out products for HF.

Amateur Radio Newsline™ Report 1343 – May 9, 2003

Amateur Radio Newsline report number 1343 with a release date of Friday, May 9th, 2003 to follow in 5-4-3-2-1

The following is a Q-S-T. Ham radio provides aid as tornadoes rip across mid America, a record session for the VEC testing system and the FCC opens the filing period on 'Broadband over Power Line communications. All this and more on Amateur Radio Newsline report number 1343 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: TORNADOES SWEEP THE NATIONS MID-REGION

Ham radio has again come to the aid of America. This time as a series of killer tornadoes rip across the Central and South-Eastern states. We have the details in this report:

--
Blackouts, water shortages and desperate searches for the missing. This is the situation confronting tornado battered residents of the central United States as the death toll rises to 40 from the most violent weather in four years.

Beginning on Sunday the 4th and continuing through most of the week, swarms of violent thunderstorms and tornadoes crashed through the United States midsection. They caused devastation in three states and are spawning problems in several others.

Kansas, Missouri and Tennessee suffered the worst damage in the initial Sunday onslaught. Kansas listed seven people killed, Missouri had seventeen fatalities and Tennessee sixteen. The storms also disrupted electrical power and telephone service with debris from fallen structures blocking roads in some areas.

One of the hardest hit areas was Madison County, Tennessee where ten people were killed. There, power blackouts were widespread and it was not known when telephone service can be restored. Several of the regions A-R-E-S groups were reported activated as was the Missouri Traffic Net operating near 3 point 960 MHz in the 75 meter band.

In Missouri, ARRL Section Emergency Coordinator, Don Moore, K-M-Zero-R, reports that amateur operators are continuing damage assessment duties. An ARRL bulletin says that the Amateur Radio Emergency Service, Radio Amateur Civil Emergency Service and SKYWARN groups were active across the affected area. Hams are also assisting the American Red Cross and Salvation Army relief operations.

A bit to the West, in Kansas, Section Manager Ron Cowan, K-B-Zero-D-T-I, says that one tornado touched down in Leavenworth County. It remained on the ground before crossing the border into Missouri. There the storm brought havoc to Platte and Clay counties before falling apart just North-East of Kansas City. But during its trek, Wyandotte and Leavenworth Counties sustained severe damage. Cowan says that homes were destroyed and utilities knocked out along the twisters path.

The tornadoes were believed to be a part of a huge weather system that rolled across the Midwest and parts of the South. It also spawned twisters in Arkansas, South Dakota and Nebraska. Storms on Tuesday and Wednesday accounted for funnel cloud sightings in Alabama, Illinois and here in Louisiana. In all, nine states are affected and the National Weather Service credited ham radio operators with dozens of storm related reports over the weekend and they are continuing into the week.

As we go to air, hundreds of people are still being housed in temporary shelters where Amateur Radio volunteers have become an important ingredient in relief efforts.

This is obviously an ongoing story and we will have an update in next week’s Amateur Radio Newsline report.

From New Orleans, Louisiana, I’m Don Wilbanks, AE5DW.

Jim.

--

Thanks Don. (ARNewsline™ from various sources including ARRL bulletins)

**

RESCUE RADIO: TORNADO DESTROYS K0ETC BEACON

There is an ironic side to this story directly affecting ham radio. The K0ETC beacon North of Joplin Missouri in grid square EM27 was aparently destroyed when one of the twisters blew down the building housing it. An Internet posting by the beacons owner Jay Rupar, K0ETC, shortly after the incident said that there were no injuries at the former beacon site but two people were killed by the same storm about 30 miles away. Rupar says that the present location of the beacon itself is unknown but that it will be replaced. (KC6WFS/7)

**

HAM RADIO HEROES: NOAA HONORS “ALERT” VOLUNTEERS

The National Oceanic and Atmospheric Administration has selected ALERT -- the Alabama Emergency Response Team to receive one of this years NOAA Environmental Hero Awards. This award recognizes ALERT for its outstanding efforts in support of the NOAA National Weather Service Forecast Office in Birmingham.

NOAA says that under the leadership of ALERT president Chuck Arthur, KF4SSX, team members have spent hundreds of hours using ham radio to coordinate storm reports throughout the Birminham office’s warning area. The agency goes on

to say that over the years they have proven to be an invaluable resource during such major events as an F 4 tornado that struck Tuscaloolsa County on December 16th of 2000 and the tornado outbreak of November 24th 2001.

NOAA took special note of ALERT's work following last years Veterans Day severe weather outbreak that included to F 3 catagory tornados that killed 12 people. NOAA says that the ALERT volunteers stayed with their Amateur Radio stations relaying critical storm reports to meteorologists and relaying storm information to Emergency Manasers across the central and northern tiers of the state. NOAA says thart the steady flow of reports were crucial to the issuance of new warnings and the office's ability to quickly get the word out to the publiic.

Presented in in conjunction with Earth Day celebrations, the award honors NOAA volunteers for their tireless efforts to preserve and protect our nation's environment. It was presentede to ALERT on Satyrday, May 3rd. More on ALERT is on the web at www.alert-alabama.org. (NOAA)

THE VEC SYSTYEM: A PROBABLE E-FILING LICENSING RECORD SET

Before a ham can respond to an emergency, he or she first has to become licensed. And a Wisconsin college may have set a new Amateur Radio record in that area. Would you believe 81 new hams in less than 24 hours? Well its true and Amateur Radio Newsline's Roy Neal, K6DUE, is here with the rest of the story:

--

It happened in Wisconsin. Picture this. 81 students sat for and passed their amateur radio tech class license exams in one day. What's more, they received their license grants within 24 hours! This became the largest test session ever to employ the new technique of on-line submission of test results and applicant data to the FCC. They are the students of Dr. John Weiss, WD8KLO of U W Stouts' College of Technology, Engineering and Management

Weiss gave his students the option of earning their radio licenses in partial fulfillment of class requirements. The examination team was coordinated by John Burningham, WB8PUF, of UW-Stout's communication, Education and Training Department. It included Weiss; Jon Fuller, W9JHF, Student Life Services; and UW-Stout students Andy Wagner, KB9TAC and Scott Littfin, N0EDV.

The University of Wisconsin-Stout has a reputation for firsts. In 2001, the college, which is located in Menomonie, became the first to receive the prestigious Malcolm Baldrige National Quality Award. It was presented by none other than President George W. Bush.

The rapid license grants were made possible by using newly available VE-to-VEC-to-FCC electronic submission technology developed by the W5YI Volunteer Examination Coordinator. Using password-protected electronic forms posted to the W5YI VEC website, John Burningham, WB8PUF began keying in the test results right after the exam session.

All 81 applications were waiting at the VEC Office when it opened the following morning. After routine screening, the applications were electronically retransmitted to the FCC. Within an hour, the FCC issued the licenses and call signs. These were immediately forwarded over the Internet to Burningham who informed the waiting students of the new calls while at the same time probably setting a new electronic licensing record for ham radio in the United States. 81 new hams in one day at one licensing location.

Go Wisconsin Stout!

For the Amateur Radio Newsline, Roy Neal, K6DUE.

--

Weiss is an Associate Professor at UW-Stout specializing in advanced telecommunications technology. Additional information on the school’s telecommunication systems program is available on the web at http://tcs.uwstout.edu. (W5YI)

HAMVENTION 2003®: FCC TO BE A NO-SHOW

Don't look for any major ham radio regulatory announcements at next weeks Dayton Hamvention. That's because the agency will not be there. David Black, KB4KCH, reports from Amateur Radio Newsline’s South-East Bureau on the what and the why:

--

Hamvention producer Garry Matthews, K-B-8-G-O-L says conflicting commitments will keep regular FCC presenters Riley Hollingsworth, K4ZDH, and Bill Cross, W3TN from attending. Matthews says the Hamvention tried to find suitable replacements, but none were available.

Speculation suggested that FCC officials might use the Hamvention's Forum to release news of a so-called omnibus Amateur Radio Notice of Proposed Rule Making expected out in May. The notice would consist primarily of outstanding rules change requests and pending petitions for reconsideration. With the Dayton FCC forum canceled, what venue, if any, the Commission might use for its release is not clear.

And what about the two hours on Saturday morning May 17th the FCC was supposed to fill? Matthews says it's being offered to other session leaders who might not like their current time slots and want to change. He says the FCC hould be back in 2004 with Hollingsworth, Cross and perhaps others representing the

Commission.

From the South-East Bureau in Birmingham Alabama, I'm David Black, KB4KCH.

--

We will have more Hamvention 2003® happenings later on in this weeks Amateur Radio Newsline report. (ARNewsline™)

RADIO RULES: FCC TAKING COMMENTS ON PLC NOI

And speaking about the FCC, e have a follow up on last weeks story about the agency releasing its Notice of Inquiry on the deployment of ''Broadband over Power Line'' or B-P-L technology. Now comes word that the complete Notice of Inquirey which was released on April 28th is available on the FCC Web site. Also that the FCC now is accepting electronically filed comments via its Electronic Comment Filing System ECFS Express page.

But what about the actual affect of B-P-L on ham radio. An ARRL Bulletin, explains that ''Broadband over Power Line'' is really a form of carrier-current communication better known around the world as power line carrier or P-L-C.

B-P-L would couple high-frequency RF to parts of the power grid and use existing power lines as the transmission medium to deliver broadband and Internet access. This is the same technology refused for use in Japan becuse tests showed signifigant interference to consumer electronic products including Amateur Radio on the high frequency bands. And in the Notice of Inquirey the FCC does acknowledge the signifigant interference risk from B-P-L.

ARRL Lab Manager and RFI-guru Ed Hare, W1RFI, also has concerns. A noted expert in the field, Hare cautions that deployment of B-P-L could affect every amateur in communities where it's employed. This, by causing a significant increase in noise levels. Obviously, this is one isssue that a lot of hams will be filing comments on with the FCC. (ARRL)

**

ENFORCEMENT: UNAUTHORIZED OPERATION BRINGS $5000 FINE

The FCC has issued a $5000 fine to Blue Ridge Erectors, Inc. of Bangor Pennsylvania. This, for operating radio transmitting equipment on 467.250 MHz without Commission authorization.

According to the FCC, back on August 27, 2002, the agency’s New York Field Office issued the forfeiture notice to Blue Ridge but the company has not filed a response to the N-A-L. After waiting almost three-quarters of a year the FCC has affirmed the fine and has ordered Blue Ridge Erectors to pay the $5000 within 30 days of the release of its Order.

For more information on this one take your web browser over to the FCC website at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-03-1366A1 (FCC)

**

ENFORCEMENT: FCC ALLEGES MICHIGAN HAM ENGAGED IN DELIBERATE INTERFERENCE, THREATS

The FCC claims that a ham has engaged in deliberate interference, broadcasting and that he threatened other amateurs. And now the agency is sending Michael Guernsey Sr, ND8V, of Parchment Michigan a tape recording to back up those assertions. Amateur Radio Newsline's Blair Alper, KA9SEQ, has the details:

--

According to the ARRL Letter, since late 1998, Michael Guernsey, Sr., N-D-8-V, has been the recipient of seven letters from FCC Special Counsel Riley Hollingsworth. This includes two warning notices. And in 2000, the FCC threatened to designate Guernsey's license for a revocation and suspension hearing. Guernsey subsequently agreed to a nine-month suspension of his High Frequency operating privileges in 2001.

But on April 7th of this year Hollingsworth again wrote to Guernsey. This time Hollingsworth said that the operation of Guernsey's station over the last several years raises questions about the Michigan hams' qualifications to remain a Commission licensee.

According to Hollingsworth, this time there is audio to support the claims. The recorded transmissions were made this past March 26th, and are said to back up complaints from other amateurs of deliberate interference on 20 meters. In his letter, Hollingsworth noted that some of the interference apparently sprang from on-the-air personal disputes or from what Guernsey perceived as deliberate interference to his transmissions. Even so, Hollingsworth said, Guernsey has apparently ignored the Commission's written and verbal warnings to not retaliate with similar behavior.

Hollingsworth advised Guernsey that the alleged deliberate retaliatory threats and transmissions on top of other QSOs are contrary to FCC rules. He also stated this indicates that the numerous warnings issued to date have little, if any, effect in regarding to bringing Guernsey's operation into compliance with Commission rules, indicating that other, harsher enforcement action may be needed.

For the Amateur Radio Newsline, I'm Blair Alper, KA9SEQ, reporting.

--

Hollingsworth told Guernsey review the tape recording and respond in writing and in detail within 20 days of reciept of its reciept. He said the FCC will use the information Guernsey submits to decide whether to designate ND8V's license for a suspension and revocation proceeding or to lift voice privileges from Guernsey's license for the remainder of his license term, which ends in 2012. (ARRL, FCC)

HAMVENTION 2003®: MEET THE MAN BEHIND QRZ.COM

Want to meet the man who makes possible the famed QRZ.COM website? If you're going to the Dayton Hamvention this year, be sure and make it a point to stop

by the W5YI booth in the main building and say hello to Fred Lloyd, AA7BQ, the founder of QRZ.COM. Fred says that he will be there throughout the show and will have some nice QRZ.COM name badge souvineers to hand out to everyone who stops by along with the latest QRZ Ham Radio CD-ROM at a special show price. (QRZ.COM)

**

HAMVENTION 2003®: THE DX HOSPITALITY SUITE

The Northern Ohio DX Association and WVNO Radio will once again sponsor a Hospitality Suite at this year's Dayton Hamvention. The suite will be open on Friday and Saturday evenings in Suite 1011 of the Crowne Plaza Hotel. The Crown Plaza is the old Stouffers located in downtown Dayton.

And in a tribute to one of the areas best known hams, the association is dedicating this year's Hospitality Suite to "Silent Key" Jim Hire, W8ZET, who was a Northern Ohio DX Association Honorary Life Member.

Hire’s wife, Janeen, KC8BRS, has decided to keep the tradition going. She will be providing some special memorabilia of Jim at the Hospitality Suite. (NODXA)

**

HAMVENTION 2003®: RAIN - NEWSLINE BOOTH

And by the way, if you are one of those planning to attend Hamvention 2003, please be sure to pass by the RAIN, Newsline and WA0RCR combined booth to say hello. Its in the Silver Arena area of the HARA Arena complex in space number 358. We hope to see you there. (ARNewsline™)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org heard on the W7SP repeater in Salt Lake City Utah and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: ED JUGE, W5EJ, - S.K.

Some sad news to report. Word thar well-known amateur Ed Juge, W5EJ, has passed away.

Aaccording to longtime friend and colleague Bob Miller, K2RM, Juge, the former W5TOO, was an executive at RadioShack for many years and one of the people who kept ham radio on the company's radar. Outside the world of ham radio, W5EJ was a well-known and well-respected figure in the computer industry.

Ed Juge also had served on the ARRL No-Code committee in the late 1980s, chaired the ARRL Digital Committee in 1992 and was particularly active in QRP. He is survived by his wife, Jo, KA5ABC, by two children and three grandchildren. (CQ)

**

EMERGING TECHNOLOGY: COGNITIVE RADIO - IT LIVES

Believe it or not there a movement underway at the FCC to increase spectrum efficiency through the use of a new technology being called cognitive radio.

What is cognative radio you ask? This is radio gear and antenna systems that could adapt to their operating environments by automatically identifying vacant spectrum, switching to that spectrum and carrying out a specific communications mission.

Cognitive radio will also be the subject of an upcoming workshop at FCC headquarters. More information is at the http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-233615A1.doc (CGC)

**

ON THE WEB: HOW STUFF WORKS

Want to find out how something works? Try taking your web browser over to www.howstuffworks.com. The site is a wealth of information on just about anything in life including ham radio. In fact, if you want a good laymens explanation of our hobby, the direct U-R-L is http://electronics.howstuffworks.com/ham-radio.htm (AE5DW)

**

SPECIAL EVENT: AMATEUR CROSS BAND COMMUNICATIONS TEST

Iin celebration of the 54th anniversary of Armed Forces Day, the United States Army, Air Force, Navy, Marine Corps and Coast Guard are co-sponsoring the annual Military and Amateur Radio Communication Test for 2003. These tests provide hams and short wave listeners an opportunity to demonstrate their individual technical skills while receiving recognition from the Secretary of Defense along with the appropriate military radio stations.

According to an Internet post by N6DDF, although the actual armed Forces Day is celebrated on Saturday, May 17th the crossband communications test was to be conducted one week earlier on May 10th. This, so that it would not conflict with the Dayton Hamvention

QSL cards will be provided to those stations who made contact with the military stations. Also, a special commemorative certificate will be awarded to anyone who receives and copies the digital message from the Secretary of Defense. (Via Internet)

**

DX

In D-X, members of the Clube Radioamadores do Entroncamento will use the special callsign, CS7AL, and will be active May 31st from Castel Alcanede for the Portuguese Castles Award. Operation will be on 40 and 20 meter SSB. Castel Alcanede is located in the Province of Ribatejo. QSL via CT1BXE, direct or via the bureau. (OPDX)

Also look for W2AZK and KF2HC from the North Jersey DX Association portable on St.Croix from June 12th to the 19th. Operation will be SSB and CW on 160 through 10 meters. QSL direct or via the bureau to the call worked. Confirmed QSOs are good towards the North Jersey D-X Association award. See www.njdxa.org for details. (OPDX)

**

THAT FINAL ITEM: ROYAL HONORS

And finally this week, a radio amateur has received royal honors in the Netherlands. Hans van de Groenendaal, ZS6AKV, of the SARL news service has the story of Lou van de Nadort PA0LOU:

--

Lou van de Nadort PA0LOU, retired Chairman of the International Amateur Radio Union Region 1 was recognised by Queen Beatrix of the Netherlands for his outstanding contribution to Amateur Radio. He was decorated with Member of the “Order of Oranje Nassau”.

Lou was one of the 3594 people who were recognised this year by the queen when the Royal Recognition awards were announced on April 30, in Holland known as “Koningine dag”, the queens birthday .

Lou van de Nadort retired from the IARU Region 1 Executive in October last year after having been almost 28 years at the helm of the organisation. In his farewell editorial in Region 1 News he called it retirement from active duty and wrote “I will always have IARU and its work at heart and will continue to support the cause"

The medal was presented to Lou at his home in Zundert in Holland when the Major and a delegation of civics and members of the VERON Council arrived there on April 30. Lou said it took my totally by surprise, I never expected it.

Hans van de Groenendaal ZS6AKV

--

ZS6AKV adds that the award is an acknowledgement for PA0LOU’s outstanding contribution to the community. (SARL News Service)

By definition, a "bug" is semi-automatic: Dits are automatically
generated, but the dahs are manually generated.

> The purpose of a military is "to close with and destroy
> the enemy."

By whose definition? The stated purpose of the Coast Guard, our
smallest military service, does not contain those words.

Name the radio INDUSTRY periodical covering that activity.

>>Also, Hams can use other skills besides CW.
>
> They do...In droves. Myself included.

The "droves" list:

1. Foul-mouthed shouting at others in newsgroups.

2. Memorizing all the advertisements in QST.

3. Bragging (sometimes incoherently) about past exploits
without providing viable references for same.

4. Obsessive crude, insulting behavior as a human being
in non-amateur communications.

> Again, you are asked...What is it you are trying to tell us about
>Amateur Radio that WE didn't already know about?

So...how is your experience with microwave ham bands,

The dictionary-accepted spelling of the verb transitive form of "focus" is with one OR two "S" as in F-O-C-U-S-S-I-N-G or F-O-C-U-S-I-N-G.

> Putz.

"Putz" is also a colloquial German term for "polishing" as in removal of metal tarnish from silverware.

It is clear that Robeson needs to putz his English word useage and spelling beyond 7th grade level.

>
> You keep repeating this, Lennie, but at no time was a "medical" discharge
>anything LESS than Honorable.

Then why didn't you get an Honorable right away?

You've claimed your Medical Discharge was due to an "accident."

Nobody in here has verified that. Medical Discharges are also
given for psychiatric problems in the military service.

Given your conduct in this newsgroup and its visible sociopathy,
a logical conclusion would be that the "accident" might be due
to mental-personality disorders.

> Again you've been caught lying. Why do you persist in lying?

No lies from me.

Robeson insists on calling all statements contrary to his Beliefs
as "lies." That is abnormal behavior and doesn't require any
"degree qualifications" to understand.

> Hmmmmm....Nothing in any era-specific radio clerk training manuals say
>ANYTHING about "closing with the enemy".

1. I was never any "radio clerk" while in the US Army.

2. I gave my Army MOS as "281.6" which is shown on my
DD-214 and has the full title of "Microwave Radio Relay
Operations and Maintenance Supervisor."

3. There are NO "radio clerk training manuals" to be found in
the US Army Training and Doctrine Command listings of
FMs, TMs, or other documents now, nor in the past.

4. Robeson's military service was in the USMC, not the Army.

5. Robeson did not claim or imply any military radio
communications duties nor was he able to state any
military radio equipment by name or nomenclature,
formal or familiar.

> Too bad those of us with REAL military experience in REAL combat can't
use
>that live ammunition on cowardly liars such as you, Lennie, who misrepresent
>their own military service by hiding behind KIA's they never knew or served
>with.

Fish story. Snow job. Lie.

Robeson implies that he has "REAL military experience in REAL
combat" yet has never been able to reference that through any
third-party reference or documentation.

Robeson stated that he had "seven hostile actions." Those three
words convey nothing definite. They are vague vapor.

> You may try to spin the servie records of ANY of us, Lennie, but YOUR
>misdeeds at the expense of KIAs is archived here.
>
> You ARE a liar.

No. I've stated no lies, committed no "misdeeds."

Robeson is off on another unbalanced trip to his own private
fairyland. He needs proper medical treatment.

I have all the names of the 71st Signal Service Battalion personnel
who were casualties in the Korean War period of 1950 to 1958.
The Korean War never officially ended and the 71st Sig Svc Bn
was renamed the Far East Command Signal Service Battalion in
late 1954. The FEC Sig Svc Bn merged with the Japan Sig Svc
Bn (old 72nd Sig Svc Bn) in 1956, taking the latter unit's name.
After that and three major Army reorganizations in Central Honshu,
The 78th Signal Service Battalion is today's name and it is based
at Camp Zama (near Yokohama), under command of the 516th
Signal Brigade at Fort Shafter, Hawaii, part of the Headquarters of
the US Army Pacific (USARPAC). The old Army radio callsign of
ADA used in Japan by the 71st remains as the Hq callsign of
USARPAC today.

There were 19 members of the 71st Sig Svc Bn killed on 1 Jul 50
in Korea. They and four crew members perished in a transport
plane landing crash, their mission to assist and strengthen radio
and wireline communications in Korea following the outbreak of
North Korean forces into South Korea in June of that year. One
of the casualties was Corporal Elmer Hardy. The billet for the 71st
and location of many Central Command agencies was renamed
"Hardy Barracks" in his honor in 1952. While most of the original
Hardy Barracks buildings and land were turned over to the
Japanese government in the 1970s, a newer, smaller building was

constructed to house several military interbranch agencies and to provide a small hotel for temporary lodging. The location and name of Hardy Barracks in Tokyo still exists for US military personnel and is listed in the current DSN directory.

The home office of the Pacific edition of the US military newspaper "Stars and Stripes" remains at Hardy Barracks (moved there in 1953). The November 10th, 2002, edition of the Pacific Stars and Stripes had several expanded Sunday memorial articles that included Hardy Barracks as a military billet in the 1950s, historical data of the location and buildings. It is on-line under the "estripes" archive section; search for "Hardy Barracks" or writer "Rick Chernitzer."

The names of various Korean War casualties are listed by military unit on at least three different websites. For other historical data on the Korean War period I would recommend Hal and Ted Barker's "Korean War Project" website. No fees are required for access or for their regular newsletter but they can use voluntary donations to maintain and keep that central information place.

The National Archives and Registration Agency (NARA) in St. Louis Illinois is the central repository for military records of US personnel of the last century. NARA will supply information on individuals who were veterans under certain conditions explained on their website. Such is available only through USPS mailings. Despite a near-disasterous fire that destroyed many records of Army and some USAF personnel, most are intact, including mine.

USARPAC has a website, as does the 516th Brigade and the 78th Signal Service Battalion. US Army "ARs" (Army Regulations) are found on a separate Army website and include verification of the callsign ADA assigned to USARPAC.

Eugene Rosenbaum, N2JTV, served in the 71st at the same time I did, doing the same Fixed Station Transmitter MOS work. He is retired from a career with the FAA and lives on Long Island, NY.

>>Try to firm up the when and where of "seven hostile actions"
>> claimed by the character assassin in the Gang of Four.
>> He hasn't done it yet.
>
> It's not necessary.

Very necessary to prove it is not a lie.

Without any references, vague vaporous statements are nothing but LIES.

>> before joining the Army voluntarily.
>
>Which agrees with what I wrote. So where was I wrong?

Refusing to use the word "beginning" in your original post.

You lie by omission. Not my fault.

>>>Len, the time for demanding Medals for Meritorious Service in
>>>the US Army is past for you.
>>
>> I got my Good Conduct Ribbon in 1955. That was good
>> enough for me at that time. :-)
>>
>> I got an Honorable Discharge in 1960. No preceding "medical
>> discharge" that later became "honorable." :-)
>
>You live in the past too much. Get out more.

I do get out, why don't you?

. I know about the larger world of radio while you are inward-
focussed only on amateur radio. I worked IN the larger world of
radio until retirement from regular hours. Very few know what
you work on or at since you won't divulge any such information.

All you state is that you graduated with a degree about a quarter
century ago. That's a long time ago. You can't live on old
accomplishments...except maybe in amateur radio.

>>>That was not amateur radio, it was PROFESSIONAL radio.
>>
>> I'd call it MILITARY radio.
>
>Were you not paid? That's the definition of professional.

Military tasks require the deliberate KILLING of the enemy.

What professions besides the military do you know where
the main priority is to KILL an enemy? I know of no
professions that do that other than executioners.

>> The job also required being able to "close with and destroy
>> the enemy."
>
>How many of the enemy did you close with and destroy?

None.

We were always training for that distinct possibility at any
time. That was a requirement.

It is common for all those who NEVER SERVED to sit back and
make fun of those who did serve.

Continue to feel smug and arrogant that you let others do their
military service while you remained a civilian.

Continue to feel smug and arrogant as a civilian...and your
apparent delusion that you were "too good" for such mundane
duties best done by "inferiors."

>>>I'm sure that the US Army did
>>>not put you on watch if you couldn't cut it.
>>
>> How can you possibly be "sure?" You've never served.
>
>True, true. You could have been unqualified to be in those watches.

The term "on watch" is a nautical one. I was in the Army.

I've never been "unqualified" for any Army duty I was assigned
to do. I was never relieved of duty due to any improper conduct
listed in the UCMJ. I was never on "company punishment,"
the Army's version of the Navy's "captain's mast."

You have NO qualifications to judge on the qualifications of
anyone in the military service at any time, past or present.

If you were "on watch" qualified, it would only be in the Iraqi
Navy before April 2003.

>And an age requirement for an amateur license, and a complete denial of the
>role of amateurs in emergency and public service communication, etc., etc.,
>ad intinitum.

You keep harping on some 1999 subject on 98-143. This is the
year 2003, four years and four months later.

I don't have a "complete denial of the role of amateurs in
emergency and public service," but I do object to the over-
exaggeration and self-important, self-righteous posturing of
many amateurs implying they are of vital necessity in radio
communications aid in such situations.

Amateur radio could disappear today and not make any
noticeable impact on REAL emergency and disaster work
done by public safety professionals and volunteers.

You and ARRL live in the fantasy glory of past
accomplishments by others in isolated incidents of
emergencies and disasters.

You don't get any medals for that, mighty morse warrior.

>> Somehow you've worked yourself up into some mighty morse
>> lather and want to damn anyone for even suggesting that
>> the morse code test be eliminated.
>
>Not me. Do you see me "damning" K2UNK?

Close to it...but you will vociferously deny that "ad intinitum."

Even now you are thinking to yourself, selecting key words
to search Google (again, "ad intinitum") in order to make some
cause celebre posting "vindicating" yourself and "proving" all
detractors of your noble god-like words never harmed anyone or
did anything wrong. The resulting cut-and-paste (for the "ad
intinitum" time) in here is a given.

>> Heh...it's true I don't have a lot of respect for the ENTIRETY
>> of the US Department of State and US foreign policy.
>
>Nor for individulas.

The word "entirety" includes ALL. Have you lost the capability
of understanding English words or do you need Remedial
English Comprehension extension courses also?

>> If ANY veteran of ANY branch of ANY military tries a snow
>> job in here or makes a lot of vapid vague generalities of any
>> sort of mighty military "experience," they should be a target
>> for veteran to practice some live fire.
>
>Sounds like a threat.

Live with it, mighty morseman. You NEVER earned any right
to posture as a military veteran.

>Were you ever in the State Department?

No. Were you?

>Ever participate in State Department communications?

Yes. Did you?

>How can you be SURE of "snow jobs"?

I was born and grew up in snow country.

I've heard more tall tales, exaggerations, fish stories, and blatant
lying tales from others about their exploits than I cared to. Some
of that even came from non-amateurs.

>pretty much what you have here.

Believers are loathe to accept observation of others when such
observations are not agreeing with their fantasies and myths.

> So after some thought about why there is such a different perception of

>the ARS between say, most of us here, and Vipul, I came to the following
>conclusions:
>
>1. He has a tendency to base his conclusions on insufficient input.

The few radio amateurs frequenting this newsgroup have a
remarkably insufficient knowledge of the rest of the radio
world, including the beloved HF portion of the spectrum where
these amateurs seem to exclusively dwell in operating.

> This isn't too unusual. Many prospective hams are scared away by a
>crank or two they meet. There are annoying people in every hobby,
>service, sport, whatever. Get over it. Prejudice won't get anyone anywhere.

Prejudice is an extreme attitude of Believers. It is also an attitude of delusional self-importance over and above others. It is endemic through far too great a minority or US radio amateurs.

The most glaring example of prejudice in US amateur radio is the militant insistance past 1990 and even past the 1999 R&O on restucturing the morse code skills must be tested for in order to achieve any US amateur license having HF and lower privileges.

> There are obese Hams. Hams are not obese.

Anyone can "profile" the radio amateurs pictured in amateur radio publications over the last half century. Many thousands are shown in periodical photographs.

> There are old Hams. Hams are not old.

"Old" is a subjective word. Demographic listings at various places put the median US amateur age at about 50 years old, so-called "middle age." The FCC has public records on the given ages of all licensed US radio amateurs. Some amateurs, for various reasons, do not wish their real ages to be known in public. That desire may be due to wanting to relive their lost youth in fantasy.

> There are White Hams. Hams are not all White.
>
> There are Male Hames. Hams are not all Male.

Anyone can view the amateur radio periodicals' photographs of radio amateurs published over the last half century or so.

Unless the viewer is nearly blind, simple observation by anyone will show that the overwhelming majority are White Males.

That very simple, no qualifications needed observation can be done by anyone.

Yes, there are exceptions. The only thing proven by exceptions is that exceptions can exist. The overwhelming majority of US licensed radio amateurs are White Males.

If not that, the only other reasons from such photograph viewing would be:

1. Non-white or female radio amateurs are purposely kept to a minimum from being photographed. Illogical and unlikely.

2. There exists a secret supply of perverts make-up and clothing where non-whites can disguise their faces and races, females

can put on male garments for the purposes of photography.
Ridiculous.

> I could go on forever.

No one lives forever.

>or.............
>
>2. He enjoys baiting Hams. That sounds like a troll

or...........

Some radio amateurs frequenting this newsgroup are both arrogant
and prejudicial in their attitudes, deliberately baiting others that
don't believe in their myths and fantasies.

Back under your bridge...

>from the electronic hobbyist person's and social aspects view. I'm just
>trying to point out Ham radio how others may see it.

Vipul, you are attempting an almost impossible task. :-)

The radio amateurs frequenting this newsgroup are existing in their own tight little fantasy, having dreams of self-importance through operating ready-made radios, pretending they are of vital importance to the nation ready to leap into action for any disaster condition and save civilization as they know it.

The sole national membership organization that purports to represent the radio amateurs frequenting this newsgroup has very little observable effort in publicizing the amateur activity to anyone but other amateurs. That lack of observable activity has continued for years despite the organization having a sub-group at their headquarters supposedly working on public relations. The organization's news department is focussed inward, not outward, seldom informing their membership of the radio services that are active and more numerous than amateurs in the EM spectrum from VLF to the maximum limit of ITU-R allocations. The end result is a profound ignorance of the rest of the radio world by amateurs unless those amateurs are also professionals in radio and electronics.

The few radio amateurs in this group manifest a mythology about their own abilities and skills that goes beyond reasonable bounds of today's radio. They are self-delusional as to their importance to their community and nation and take pride in their continuing maintenance of a living museum of the air showcasing the standards and practices of seven decades past.

>
> I know you are a pathological liar. Need more?

P-A-T-H-O-L-O-G-Y noun

1. the branch of medicine that deals with the nature of disease, especially with structural and functional effects;
2. any abnormal variation from a sound condition.

Ref: Webster's New World Home and Office Dictionary

As to the first definition, licensed nurses do not have the legal permission to diagnose and treat any effects in medicine; that is only allowed to licensed Medical Doctors.

As to the second definition, there is no sound carried in news-group messages...and "abnormalities" are not custom-fitted by individuals for use as pejoratives thrown for personal pleasure of the thrower.

The thread is clearly labeled as concerning itself with Public Service and whether or not individuals wish to engage in such.

Robeson has demonstrated an abnormality of mental function concerning his almost total obsession of stalking and attacking the character of certain individuals regardless of any message thread subject. That is on public display and has been for several years. Such is clearly abnormal in a civil society.

R-E-L-E-V-A-N-T

This newsgroup is about AMATEUR radio policy, mighty morse minuteman.

CB, or Citizen's Band Radio Service, regulated under Part 95 of Title 47 CFR, does not require either licensing, a test of any kind, or morsemanship skills.

It should be obvious to you that "CB" is NOT amateur radio as regulated under Part 97 of Title 47 CFR.

>>You are the acknowledged expert on FAA registration,
>> pathology, electronic engineering and so forth becues you
>> know all about them and thereby qualify as judge about them
>
> "Becuse"...?!?!

B-E-C-A-U-S-E

Think of this new word as a cue for you to jump in, pea-shooter blazing, distemper manifest in saliva-drooling open foul mouth to type more nonsense about your obsession targets.

You would do much better in getting off the Internet and using your beloved "amatuer" radios (apparently you have both amateur and "amature" radios, whatever the latter is) to engage in more meaningful morsemanship in civil dialogue using the truthfulness of 599 signal reports.

> Sheeeeesh. What a PUTZ!

Tsk, tsk, tsk...more amateur extra "civility" from the macho morse minuteman...proving that he has no social skills away from his "amatuer" radio.

From: Amaretto <someone@somewhere.com>
Message-ID: <b9mgsu$100$1@news.doit.wisc.edu>
Source record: 66959

Hello. I am interested in upgrading my BC-60XLT to something more comprehensive here in the USA. I was wondering if there are new scanners sold in the USA with cell blocking such that--using either software or hardware manipulation--the cell blocking could be removed. It is possible to have legal intentions; say, if a person purchased a scanner in the USA then wanted to bring it to Japan. Regardless, if anyone knows of a model and method of manipulation that would be excellent!

> minuteman

As YOU ahve pointed out, it IS an UNMODERATED newsgroup.

The THREAD was about CB vs Land Mobile Radio.

YOU posted a rather thorough historical bit on CB radio since it gave you
a chance to flash a bit, and now you are "redirecting" back to the overall
newsgroup purpose.

YOU found it perfectly acceptable to post your stuff without question.
Now that it is no longer in YOUR best interest to do so, you wuill try and
redirect the conversation away from it.

"Two-faced".

>CB, or Citizen's Band Radio Service, regulated under Part 95 of
> Title 47 CFR, does not require either licensing, a test of any kind,
> or morsemanship skills

"Licensing" was not the topic. The international definitions of what constitutes "land mobile" was. Neither was mode of operation. A "land mobile" station is not limitied to voice communications.

>It should be obvious to you that "CB" is NOT amateur radio as
> regulated under Part 97 of Title 47 CFR

Duuuuuuh...ya think?

>You would do much better in getting off the Internet...(SNIP)

WHAT...?!?! And leave you all alone to lie, deceive and mislead all by yourslef..?!?!

HEAVEN FORBID!

>Tsk, tsk, tsk...more amateur extra "civility" from the macho morse
> minuteman...proving that he has no social skills away from his
> "amatuer" radio.

Keep on thinking that on thinking that if it makes you happy, Lennie.

>discharge
>>anything LESS than Honorable.
>
> Then why didn't you get an Honorable right away?

I did, Lennie. Why do you keep asserting otherwise?

> You've claimed your Medical Discharge was due to an "accident."

Yep.

>Nobody in here has verified that. Medical Discharges are also
> given for psychiatric problems in the military service.

Was that YOUR reason for terminating so brilliant a career?

>> Again you've been caught lying. Why do you persist in lying?
>
> No lies from me.

Oh? Your correspondence course trained shrink wife does this for you
then?

>Robeson insists on calling all statements contrary to his Beliefs
> as "lies."

Something is a "lie" when it's meaning is inherently false. You make
frequent and obvious false sttements.

>That is abnormal behavior and doesn't require any
> "degree qualifications" to understand.

You're right. It doesn't. That's why I am not the only person inhere who
calls you for what you are...a liar.

>> Hmmmmm....Nothing in any era-specific radio clerk training manuals say
>>ANYTHING about "closing with the enemy".
>
> 1. I was never any "radio clerk" while in the US Army.

Uh huh.

>2. I gave my Army MOS as "281.6" which is shown on my
> DD-214 and has the full title of "Microwave Radio Relay
> Operations and Maintenance Supervisor."

No doubt the parallel MOS to the Marine Corps' MOS 1369.

>3. There are NO "radio clerk training manuals" to be found in
> the US Army Training and Doctrine Command listings of
> FMs, TMs, or other documents now, nor in the past.

Maybe that's why you were so inadequately trained.

>4. Robeson's military service was in the USMC, not the Army.

I see...Only LENNIE can cross military roles and be accurate?

> 5. Robeson did not claim or imply any military radio
> communications duties nor was he able to state any
> military radio equipment by name or nomenclature,
> formal or familiar.

I have. You just choose to ignore it. And what part of it you
"acknowledged" you simply made fun of or tried to denigrate.

Oh well.

>Fish story. Snow job. Lie.

Keep telling yourself that, Lennie. Repeat it over and over. It still
won't make it any more accurate, but it will make you FEEL better for having
done it, and that's all that counts.

>Robeson stated that he had "seven hostile actions." Those three
> words convey nothing definite. They are vague vapor.

Kinda like your "Extra lite out of the box" comments, Lennie?

>No. I've stated no lies, committed no "misdeeds."

You may continue to repeat THAT to yourself too, Lennie...And it still
won't make THAT any more accurate either.

>Robeson is off on another unbalanced trip to his own private
> fairyland. He needs proper medical treatment.

Remember to keep clickng your Ruby Slippers while repeating it over and
over....

>I have all the names of the 71st Signal Service Battalion personnel
> who were casualties...(SNIP)

I am sure you do.

Have you sent that letter to their families apologizing for using them as
opportunities for embellishing your own meager service record, Lennie?

>There were 19 members of the 71st Sig Svc Bn killed on 1 Jul 50
> in Korea.

You've just violated your own five year three month "taht's too old to discuss here" threshold, Lennie.

You still have not satisfactorilly explained how these guy's deaths had anything to do with YOUR qualifications to be an FCC licensee or your qualifications to discuss Amatuer Radio policy.

You brought them up ONLY to somehow, however remotely, polish your own brass.

>The home office of the Pacific edition of the US military newspaper
> "Stars and Stripes"...(SNIP)

...has nothing to do with the thread topic, nor of YOUR qualifications to be an FCC licensee or discuss Amateur Radio policy.

>The names of various Korean War casualties are listed by military
> unit on at least three different websites.

Makes it a lot easier for you to pull a spin together, doesn't it?

>Without any references, vague vaporous statements are nothing
> but LIES.

If you insist, Lennie. While were at it, we're still waiting on YOUR "extra lite" to show up on the database.

Now...continue to click your ruby slippers together while reciting all those things you insist must be true in order to make your disgusting rants true, Lennie.

It won't work, but eventually you'll fall asleep for the night.

Okay. You're licensed as a Technician. So here are some of the things
you can do:

Lots of charities have events that need radio comms to coordinate their
events. At times, there may be emergencies at the same events. It isn't
glamorous work most of the time, but you get the chance to meet and talk
to the other volunteers and participants. This isn't the sort of thing
that gets written up in QST, but it is valuable service nonetheless.

Skywarn. NOAA runs this. In addition to first alerting about tornados,
they collect data about other weather, disasters and mini disasters.
Even localized damage is incorporated into their databases. This is
because they can correlate between say a report that a strong wind blew
over a tree in your yard, and what their radar might have been showing
them. Although anyone can get involved in this, they seem to like hams a
lot.

ARES/RACES. There is probably a net in your area. Even something as
simple as checking into the net gives the group an idea of net/repeater
coverage, who is out there, and let you know where to turn if there is a
problem in your area.

You might just enjoy it.

In article <b9mclu$bh8$1@news.hawaii.edu>, jeffreyh@Hawaii.Edu (Jeffrey Herman) writes:

>>Perhaps not feel welcome by the CW lovers. Some people with BSEEs have designed
>>circuits, not limited to repeaters. But, the code requirement restricts their
>>ability to design circuits <"legally"> on HF frequencies,
>
>Nonsense. If they're serious in their desire to design circuitry for
>HF applications, they can always apply for a Part 5 Experimental Radio
>Service license from the FCC.

Actually, NO license is required to DESIGN or even test circuitry at HF or anywhere from VLF to light frequencies.

Not even a permit required.

Radiated RF testing can be performed in shield and screen rooms, has been done so for decades. Shield rooms and screen rooms can contain all the RF radiation power above permitted FCC regulations.

Few radio amateurs know of shield rooms or screen rooms, even fewer have actually done any sort of work in them. Ignorance of long-standing technology widely used in the electronics industry is not a virtue.

Unrestricted RF propagation of civil radio systems or circuits requires licensing by the FCC in the USA is their RF power is above certain levels on certain frequencies. Any power level below the FCC maxima is free and open, without license. See all of Title 47 CFR to verify, most Parts.

The FCC does not regulate government radio use in any way. The NTIA does that. Nearly all government contracts for radio systems that radiate RF allow unrestricted operation without any license from any civil radio regulating agency. Perfectly legal. Done all over the USA and possessions.

>There are certainly engineers employed
>by Yaesu, Kenwood, Icom, et al, who do not possess amateur radio
>licenses yet turn out products for HF.

There are no engineers at all at Hallicrafters in Chicago. Halligan's company dissolved long ago. Bye-bye.

There are thousands of engineers, most not licensed in amateur radio, designing and testing cellular telephone handsets and cell

site equipment in the USA. One in three Americans is a cell phone subscriber according to the US Census Bureau in 2002. The modern hold-in-one-hand cellular telephone handset was 30 years old in April, 2003...first such cell phone call then and also the first to have a noisy connection on a cell phone (IEEE SPECTRUM for May 2003).

Engineers at ITT Fort Wayne, IN, designed the present-day US military small-unit land-air radio system...and also engineered the "SIP" or SINCGARS Improvement Program version of same which is half the original size. Over 240 thousand radio sets were produced and fielded to US forces since 1988 according to US military public data as of the end of 2002.

Harris Corporation, headquartered in Rochester, NY, has several divisions designing and manufacturing radios for both commercial and military use, including the UK military compatible counter-part to the US SINCGARS. Harris' Broadcast Division made the HF transmitters used by W1AW memorial station. Harris is presently hiring engineers...in case anyone wishes to "step up."

There is a great deal of RF design, production, and test going on today in the USA at all frequencies from VLF on out past 100 GHz for a wide variety of radio service applications. There has been no emphasis on HF in the USA for at least 3 decades, so the "example" of only off-shore amateur equipment manufacturers and their designers is too limited. Nearly all off-shore companies design and produce radio equipment for non-amateur service equal or exceeding their revenue from amateur markets.

SGC in the Puget Sound area of Washington is a wholly-US corporation and their chief product is an HF SSB transceiver sold to both amateurs and small boat owners. The founders are in the first two letters of their corporate logo: Stoner and Goral, both licensed radio amateurs though Don Stoner is SK.

There doesn't seem to be any limit for the future in "radio" design and development since that keeps increasing in size, scope, and applications over the entire EM spectrum. Narrow focus on radio development only for amateur markets and only by off-shore companies is far too limiting. The future is open for the daring.

>regulations?
>

>So what's your point?

That you are unable to focus on any "point" other than what is
allowed by your amateur technology blinders permit. That is
tantamount to tunnel-vision.

>Did the "radio physics" of phasing-type SSB change from 1932 to 1978?

Absolutely...and all the way to 2001 with the merger of the
four-channel CMOS switch (Tayloe Mixer) and the Gingell
polyphase network.

You are apparently unable to "see" the evolution because of
your fixation on amateur technology and Belief System in
the amateur-as-pioneer myth.

>Not at all. Nothing you wrote in those first 13 pages was a new idea.

Comments on NPRMs are not required to have "new ideas."

Try to study what they really are. The FCC website is one
place to go for such insight.

>> "Behaving in a civil manner" applies to all.
>
>So try it sometime.

I did. In here. At first. The avalanche of boorish, insulting,
puerile, snarly, sarcastic name-calling from pro-code test
advocates of that time quickly demonstrated that this arena
does not allow civility as a norm.

Syncophancy to ARRL maxims does not equate to civility.

Holier-than-thou attitudes of the already-licensed olde-tymer
does not equate to civility.

Exaggeration and sins-by-omission do not equate to civility.

Assumptions of god-like knowledge and behavior does not
equate to civility.

Pedantic preaching of some fraternal gospel does not equate
to civility.

Constant misdirection into minutae and unrelated areas
along with demands to answer your obviously biased
questions does not equate to civility.

You have claimed equality to all six of those in here.

That is invalid, incorrect, and uncivil as well.

Try to argue the SUBJECT, not the person of those who
have differing opinions to yours.
>
>> You have to understand that this is a very open forum, doesn't
>> cater to your whims, desires, or anything you favor.
>
>Neither are you, Len.

I understand perfectly well...and also understand the mindset
of those syncophants demanding capitulation to their false
Belief system.

>> You aren't
>> moderator, aren't "leader" no matter how much you post in
>> almost constant attendance daily.
>
>Neither are you, Len.

Incorrect. I'm trying to focus on the SUBJECTS. You
constantly try to boresight persons whose opinions differ
from your concept of the subject.

>> You've got to accept that.
>
>I do. You obviously don't.

Incorrect on both sentences of yours.

You strive constantly to spin others' opposite-opinion replies
to some kind of negative ethical attribute. All that is is just
a politer form of personal insult and a denigration for heresy
in your Belief System.

I understand far more than you expect and have been pointing
that out to the insulters, the smug and arrogant self-righteous

radio gods who permit only a Belief in their System.

True civil debate on subjects long since disappeared in this newsgroup. The snarly acidic wit of Jim Kehler, KH2D, led the forum's general tone six years ago...Kehler was not forgiving of any person who ventured opinions to the opposite of his obvious extreme PCTA viewpoint and let everyone know it. Not in "polite terms," either. Kehler became sickly, moved from Guam to the mainland, hasn't been here for years. I'm still here.

>> This venue is unmoderated, open to any that have access. You
>> can't dictate who can say what and when...the best you can do
>> is try to wear down opposition with long, Long, LONG postings
>> to make them go away out of irritation.
>
>Sounds like what you do, Len.

I reply to messages. Short messages get short replies. Long messages get long replies. I start very few threads in here, but have from time to time.

You issue "Sermons on the Antenna Mount" from time to time and become agitated when the congregation becomes unruly, not honoring or revering your creed of code. Then you complain about those of opposing opinion being "uncivil." Tsk, tsk. TS.

The verb intransitive form of the word "focus" can have one "S" or two. Both forms are acceptible.

>>Self-help at the hospital medications cabinet is not a good
>> thing without full medical knowledge and proper diagnosis.
>
> Perhaps if the help YOU sought was other than your correspondence course
>trained shrink wife...?!?!

My wife NEVER took any "correspondence courses" to obtain her Bachelors or her two Masters degrees. All required formal classroom attendance. That included additional extension classes at the University of Wisconsin...not to be confusd with Beloit College also located in the state of Wisconsin. Her MS in Education allowed her several years of teaching (K to 12) experience in classrooms in the state of Illinois.

My wife is not a "shrink." She retired from private practice as a Social Work Counselor in the state of Washington. Previously she was in private practice in Social Work in the state of Illinois and also worked for the government of the state of Illinois in Social Work, part of that time counseling mental patients.

Counseling in Social Work requires a great deal of applied psychology with all patients. Had you bothered to see what is required under Social Work curricula and state licensing for same you would understand that.

You are not interested in seeing anydamthing, only interested in the sociopathic, disrputive, foul-mouthed, foul-minded behavior you exhibit in this newsgroup, insulting and trying to demean anyone who does not agree with you...and not stopping to attempt any civility, just doing more of the same to targets' spouses, families, ancestry, and ethnic origin.

Is that a fine, noble attitude to display to the world as an AMATEUR Extra Class licensee?

That isn't an attitude for a civilized human being.

Are you another pedant? Did you answer the call of nature today? :-)

I'm just curious as to who used "bugs" for radio communications purposes in the military.

>> The purpose of a military is "to close with and destroy
>> the enemy."
>
>By whose definition? The stated purpose of the Coast Guard, our
>smallest military service, does not contain those words.

By definition of the UNITED STATES ARMY for over a decade, since the late 1940s to sometime in the 1960s when the hanky holders and other cowardly peaceniks forced some politicians to change the wording.

The USCG isn't always a "military service," is it?

If you bothered to read the newspapers last month, you may have seen what the US and UK ARMIES could do in the Middle East...with a lot of help from the United States Air Force and United States Navy. Three weeks. A whole middle-sized country invaded, rolled over, occupied with an enormous "kill ratio" in the US-UK favor.

Today the buzzword in the REAL United States military is "warfighter." It's been around for nearly a decade.

Communications-wise, your "bug" got squashed a long time ago by everyone else except the amateurs.

Try to wipe up the old squash marks, okay?

Poor lil Steamy, worked as a purchasing agent for less than a year "in the electronics industry" and never once got into REAL engineering of any kind. Now he pretends to be some kind of judge on what engineers do.

Steamy only has one kind of "do." Do-do.

>>>Your point of view includes things

>
> You never were ANY type of engineer to have EVER been any type of
>engineer.

Actually, Vipul has been FAR CLOSER, for LONGER to Real Engineering than lil Steamy ever did.

Steamy is stalking up a storm in his fantasyland of dreams.

There is no URL cited here. Nor have you provided any way to check on the quote. You've given a title of an item but is it a book or an article. If it is a book, who is the author and what is the publishing company? If it is an article, who is the author, what publication is it printed in, and where can one access this publication.

In other words, you've just failed the most basic of citation requirements.

Sorry 'bout that, had the wrong spelling for "Carlisle;" it's actually Carlyle. Anyway, here's the synopsis from the NPR website:

"May 6, 2003

Author of The Iron Triangle: Inside the Secret World of the Carlyle Group (Wiley). The Carlyle Group is one of the most powerful and well-connected private equity firms in the world. Its investments -- most notably -- in timely defense and aerospace industries has made it highly profitable. The group's roster includes or has included former President George Bush, Sr., (advisor), former Secretary of Defense Frank Carlucci (former chairman), Saudi Arabian Prince Alwaleed Bin Talal (investor) and former Secretary of State, James Baker III (managing director and senior counselor). Briody writes that the Carlyle Group "operates within the so-called iron triangle of industry, government, and the military" and that it "leaves itself open to any number of conflicts of interest and stunning ironies." "

I believe it was both the author and, later, the Spokesperson for the Carlyle Group that were on Fresh Air. A Synopsis is the topic was about the revolving door between the govt. and defense industry, and the topic of conflict of interest. The interview is available from http://discover.npr.org/features/feature.jhtml?wfId=1253480.

Calling CQ and collecting signal reports (such as 5er-9er) is not socializing.
Thats why they call it "work"ing stations. Boring. Seems like work too.

> we are in fact, socializing, whether sitting
>at a keyboard or a radio.

Hams operated while others at the DX location were at the beach, walking
around, boating, cycling etc.

Not socializing. Its group supported,anti-social, activity.

"5er-9er"? What a laugher.

> Thats why they call it "work"ing stations. Boring. Seems like work too.

What you need now, in addition to your new job, is a new avocation. What
kind of moron sticks to something he so obviously detests?

It's pretty hard to socialize while cycling. I can almost imagine you
cycling about the green while discussing classic poetry or 12th century
Chinese pottery.

> Not socializing. Its group supported,anti-social, activity.

I see. This is another version of "one definition for Vipul, another
meaning for the rest of humanity".

There you have it. What about you comments to another about how it
feels to be under fire?

> We were always training for that distinct possibility at any
> time. That was a requirement.
>
> It is common for all those who NEVER SERVED to sit back and
> make fun of those who did serve.

You make it easier for them with your "close with and destroy the
enemby" spiel.

> Continue to feel smug and arrogant that you let others do their
> military service while you remained a civilian.

Leonard, you are one pathetic hunk of DNA.

> Continue to feel smug and arrogant as a civilian...and your
> apparent delusion that you were "too good" for such mundane
> duties best done by "inferiors."

This new revelation of an inferiority complex over your military service
is only rivaled by your amateur radio inferiority complex.
Jim is probably a bit young to have pulled your military duty for you.
I tried to get my dad's okay to enlist for Korea but he thought it best
until I was a bit older. I was four when the fighting stopped.

>
> You have NO qualifications to judge on the qualifications of
> anyone in the military service at any time, past or present.

Keep that in mind the next time you're tempted to comment on the
military service of others.

> I don't have a "complete denial of the role of amateurs in
> emergency and public service," but I do object to the over-
> exaggeration and self-important, self-righteous posturing of

That'd be particularly true if the mode in use was CW.

> The
> contest had both HF phone and HF CW modes.

Great. If the mode in use was CW, the kid who didn't know morse
wouldn't be good enough to operate.

> I operated HF phone mode.

Were you good enough?

> > >Copying the exchange information correctly at high speeds through QRM or
> > >QRN is certainly the kind of skill which is useful in emergency
> > >communications.

Someone is always "there".

> Also,
> this is one skill that happens to overlap. Contesting is a game, not a drill.

No one claimed that contesting is a drill. It is a good way to build
skills needed for emergency communications.

> The focus is to collect contacts, not emergency communications. This > is weak
correlation and you know that.

Yes, your correlation is generally weak but I've allowed for that.

Seems like one guy, if you are to be believed, said that to you. I've now written it about you. By that standard, are you now a cult?

I did not "refuse" to use it. The discussion was about your military
communications experience, and how the Army taught you what you needed to know.

In fact, the words I used were your own words to Jeff Herman, KH6O, back on
3/28/00 , with a simple substitution of your name for his name and "US Army"
for "USCG" (US Coast Guard).
>
> You lie by omission.

No, I don't.

I think that seven years of observation of Len's behavior toward others
is sufficient time to allow as the basis for forming an opinion. Len

doesn't play well with others.

I think this is more likely because Vipul has been corrected on his
mistaken claims any number of times. That hasn't stopped him from
reiterating them. You have to ask yourself why anyone would continue in
amateur radio or bother to post about amateur radio here if he found it
so unpleasant.

Lets try to make some sense of this, Vipul.

Which contest was this? It is easy to pull up the rules to most
contests. we can find out what the deal was with the "improper contacts.

What was it that made the contacts improper?

For instance, I participated in the NEQP the other week. I answered a
CQ. Turns out the person I answered was in Virginia. Since I was in
Pennsylvania, the QSO did not count. The reason? At least one of the
stations had to be in one of the New England states. It sounds arbitrary
until you consider that it is a State (regional) QSO party. The goal is
to contact as many counties in the region as possible, and secondarily
have as many QSO's as possible.

Each contact is worth so many points (determined by mode used)

Each county is considered a multiplier. every new county worked advances
the multiplier by one.

Each State is a multiplier. Same as the counties.

At the end of the contest, you take the points times the multipliers,
and there is the score.

As for 10-10 numbers, it wouldn't make sense to exchange them in a
contest in which they were irrelevant. It would be like exchanging the
year we were first licensed in a contest where we were supposed to
exchange the county we were in.

I think you were making a judgement on insufficient data here.

>>>anything LESS than Honorable.
>>
>> Then why didn't you get an Honorable right away?
>
> I did, Lennie. Why do you keep asserting otherwise?

Because of your own words in here.

An Honorable Discharge is NOT the same as a Medical Discharge.

If they were the same then there would not be two different documents.

>> You've claimed your Medical Discharge was due to an "accident."
>
> Yep.

You can't have it both ways. Make up your fantasy mind.

You said you got a Medical Discharge first, due to an "accident."

Later on you said it was the "same" as an Honorable.

>>Nobody in here has verified that. Medical Discharges are also
>> given for psychiatric problems in the military service.
>
> Was that YOUR reason for terminating so brilliant a career?

I retired at age 65. Not a problem.

When I enlisted voluntarily in the US Army, ALL who entered Army service regardless of being a compulsory or volunteer, were contracted for an 8-year term. After an active duty period, the remainder of the 8-year term was spent in reserves.

>>> Again you've been caught lying. Why do you persist in lying?
>>
>> No lies from me.

>
> Oh? Your correspondence course trained shrink wife does this for you
>then?

There is NO one here who is "correspondence course trained," and
you've had it explained about education adequately in a previous
message.

You continue with stalking, baiting, personal insults about my wife as
well as about me.

That is reprehensible conduct by any human being.

>>Robeson insists on calling all statements contrary to his Beliefs
>> as "lies."
>
> Something is a "lie" when it's meaning is inherently false. You make
>frequent and obvious false sttements.

No. I make neither false statements nor "sttements"
(whatever the latter is).

You cannot blithely label someone as a "liar" without showing
proof of such "lying."

You are digging yourself deeper into a pit of fantasy existance that
exists only in your imagination.

>>That is abnormal behavior and doesn't require any
>> "degree qualifications" to understand.
>
> You're right. It doesn't. That's why I am not the only person inhere
>who calls you for what you are...a liar.

There are others in here as well as "inhere" who have the same
affliction for Orwellian "Newspeak." They also want to call truth
as "lies" when such truth does not fit their Beliefs.

>>> Hmmmmm....Nothing in any era-specific radio clerk training manuals say
>>>ANYTHING about "closing with the enemy".
>>
>> 1. I was never any "radio clerk" while in the US Army.
>
> Uh huh.

I'm glad that you are capable of some agreement, however slight.

Feel free to check with NARA on my Army service record.

Army Serial Number RA16408336

>>3. There are NO "radio clerk training manuals" to be found in
>> the US Army Training and Doctrine Command listings of
>> FMs, TMs, or other documents now, nor in the past.
>

> Maybe that's why you were so inadequately trained.

You have NO experience in military radio communications and
cannot judge what is adequate or inadequate in military
radio communications of the USA.

There were NO "radio clerk" MOSs in the US Army in the 1950s
or now. There were somewhat similar MOSs in the US Army
of the 1950s but those pertain only to NON-radio clerking jobs.

My training was adequate for all jobs that needed to be done:
Fixed Station Transmitter, Carrier Equipment, Radio Relay
and finally Microwave Radio Relay. All with combined operations
and maintenance at supervisory rank.

>>4. Robeson's military service was in the USMC, not the Army.
>
> I see...Only LENNIE can cross military roles and be accurate?

I've had OVER 50 years of exposure to all branches of the US
military, first as a US Army soldier-signalman for 4 years, then
as an electronics engineer on-site at many US military
installations, all branches, while working in electronics
corporations after 1956. I stay informed on many things,
factual data rather than emotion-driven fantasies of greatness
and play-acting...as you do.

>> 5. Robeson did not claim or imply any military radio
>> communications duties nor was he able to state any
>> military radio equipment by name or nomenclature,
>> formal or familiar.
>
> I have. You just choose to ignore it.

You have not. You should have known about the basic small-
unit radio system in use in US land-air forces that has been
operational for 14 years. You should have known about its two
predecessors. You've not mentioned word-one about any of
them. One of the two computer training aids in operation of the
basic US land-air radio system was written by the USMC and
has been in use at the Army's Signal Center at Fort Gordon for
at least 4 years. Both are and have been public release items
for that length of time. You've not mentioned word-one about the
supplementary HF radio systems used by US military land
forces (both USA and USMC) for several years yet you claim
to have done so. All you've done on such mentions is to say
you could not mention them in detail because those are "secret."
That's nonsense since details of name, nomenclature, general
details, manufacturer, contract award monies and duration has
been public knowledge since the first bids. Such has been public
in the USA as long as you've been alive.

> And what part of it you
>"acknowledged" you simply made fun of or tried to denigrate.

I've only made fun of your attempts at LIES, sins of omission,
FALSE information, snow jobs, and fish stories you've done
because there is NO verification or valid reference to any of
your military radio communications claims.

> Keep telling yourself that, Lennie. Repeat it over and over. It still
>won't make it any more accurate, but it will make you FEEL better for having
>done it, and that's all that counts.

I will continue to expose your bluffing and lying, continuing to post
references and true public data about REAL world radio
communications. Your only references to radio seem to be QST
or Popular Communications and "facts" from ham radio
advertisements.

>>Robeson stated that he had "seven hostile actions." Those three
>> words convey nothing definite. They are vague vapor.
>
> Kinda like your "Extra lite out of the box" comments, Lennie?

Absolutely NOT.

Not only do you bluff and lie about overall radio knowledge and
testing but your disordered mental fantasy cannot differentiate
between situations of military service and amateur hobby
activities.

Now, describe WHERE and WHEN those "seven hostile actions"
took place and provide a reference to the validity of that claim or
admit you were bluffing, lying, and stop with such tale-telling.

>>No. I've stated no lies, committed no "misdeeds."
>
> You may continue to repeat THAT to yourself too, Lennie...And it still
>won't make THAT any more accurate either.

Your mental state is not rational, cannot differentiate between
reality and the fantasy of your imagination.

What I've said as to factual data and information is all, repeat
ALL referencible. I've given such references in here, continually
since I began posting. Some are not easy-to-get-at references
but can be found and verified. I try to limit references to the
easiest to "get at" in the form of websites...for others to verify
for themselves.

As to OPINIONS, those vary with individuals and one person's
opinion is no more "valid" than anothers. You apparently cannot
understand that since you constantly express your personal
opinion as "truth," thereby making opposite opinions "lies." That's
a fantasy, a mental problem common to all self-righteous people
who refuse to accept other points of view.

You constantly confuse factual data with the fantasy of your own
opinions.

>>I have all the names of the 71st Signal Service Battalion personnel
>> who were casualties...(SNIP)
>
> I am sure you do.
>
> Have you sent that letter to their families apologizing for using them as
>opportunities for embellishing your own meager service record, Lennie?

That's a disgusting little statement, unworthy of a rational human
being let alone a veteran of the military.

I've honored their memory, not only in words but in military
ceremonies such as Retreat (lowering of the US flag at sundown).

My US military service record is archived at NARA. It is detailed,
honest, no lies, distortions, or untruths. There is not the slightest
condemnation by anyone or any agency in it. It is not extra-
ordinary but it does indicate I received promotion in rank almost
as soon as I was eligible after time-in-rank. Thousands after
thousands of us served in the same signal battalion, doing our
duty during a time of active war followed by uneasy truce, then
continuing with our lives afterwards. I've been in communication
with five of those veterans since, plus one civilian employee
of the Army, later the Air Force, for shared interests in a single
small organization and the part it played in the larger world of
radio communications...and some kinship of all contributing to
the sucesses of our tasks. We did no Great Deeds, were not
deserving of high battle-won medals of valor...we just did our
jobs well, did them as required, kept the communications
running "24/7" for years, serving our country.

None of us, Army or Air Force or a few civilians, are worthy of
the condemnation, hatred, bitterness, and contempt of others
who came later or were never in the military service.

>>Without any references, vague vaporous statements are nothing
>> but LIES.
>
> If you insist, Lennie. While were at it, we're still waiting on YOUR
>"extra lite" to show up on the database.

Not a requirement to serve one's country in any future.

US amateur radio is NOT a military service, never was.

There is NO "extra lite" in any "database" other than some
brewery.

Robeson has NOT supplied the WHEN and WHERE of his
claimed "seven hostile actions." If he does, then he must
provide references where anyone can verify his claims.

No references, no validity mean just LIES, exaggerations,
fish stories, snow jobbing.

Put up or shut up, Robeson.

There are radios that can be purchased without the cell blocking. You would have to have a purpose for it such as EMC/EMI applications. The ones I know of sold for around $60,000 in 1995 dollars, so I suspect they are a bit more expensive today. Perhaps you'd rather buy a Porsche?

Sounds more like the local agents incompetence rather than the fcc as
a whole. They don't seem to have as much trouble here. We had a couple
of squirrels jamming a repeater here, and they did it from mobiles.
The fcc sure had no trouble locating them. They came up and tapped on
his window while he was talking sitting in a parking lot. I wasn't
there, but I wouldn't be surprised if he made a mess on his seats.
They also had no trouble tracking an "11m freebander" friend of mine.
Didn't take them long at all. I know "myself", I wouldn't have any
trouble tracking these people. If I can do it, the fcc should be able
to do it better. Being the air bands are VHF, and line of sight, if
they couldn't find that guy, they need to go back to "tracking
school". That should have been a piece of cake, as the other agency
apparently showed them. I would have been embarrassed too...:/

And your "story" sounds like wishful thinking on your part,
a fairy tale. It doesn't take much to see how you deliberately
left out any verifiable details. 11m freebander? Yeah right,
like they're going to waste their time. Ditto with amateur
repeaters, they don't waste their time. Post proof. How
about a news release reference for starters. And where did
all this supposedly happen? Nice try, but your "story" is
just a truck load of Bullshit.

Henry

This was thirty years ago. My details could have been
"time-degraded". It probably was a 41-footer.

We were measuring the field pattern of a MF (468 kHz as I
remember it) vertical antenna on a cargo vessel as the vessel
steamed a fairly tight circle in San Francisco Bay and we were
keeping radar station on that vessel. I remember it vividly
because it was my birthday.

Hello Robert .... I couldn't even put this in the non-sequitur bin. I use a key board all the time..straight baudot etc. FEC is a very under utilized mode with which I have had a lot of fun with over the years. Unfortunately my PK 232 bit the dust and all my attempts at repair have failed. Also unfortunately is the fact that my tower and antennas are coming down after 28 years. I will be on with a $3 dollar piece of wire and having fun on ...you guessed it CW with my K2. It is a shame Bob that you couldn't muster the meager effort to pass 5 WPM. I say this because of a lack of a call after Robert. Either that or you are ashamed of your call ...either way I would like to work you qrp one cold winter night with the mellow sounds cont. wave.

I'll be waiting ....God Bless Tom Popovic KI3R Port Vue Pa. nr Pittsburgh

>> I did, Lennie. Why do you keep asserting otherwise?
>
> Because of your own words in here.
>
> An Honorable Discharge is NOT the same as a Medical Discharge.

Sure it is. I ahe an Honorable Discharge. It was due to medical reasons.

Sorry. You may argue with DoD on this if you acare to..thier rules. Sorry
they didn't clear it through you first.

>If they were the same then there would not be two different
> documents.

It's not two diferent documents. One DD214. One Honorable Discharge.

>>> You've claimed your Medical Discharge was due to an "accident."
>>
>> Yep.
>
> You can't have it both ways. Make up your fantasy mind.

No fantasy. One document. Honorable with a medical code. Sorry
again,.Your Putziness. I wudda had the USMC call you first if I thought it was
going to give you so bad a case of heartburn.

>You said you got a Medical Discharge first, due to an "accident."

Not "first". Same time. If I didn't give yuo "all the details", too bad.
I didn't think a fellow Veteran was going to try and make some "federal case"
out of it.

>Later on you said it was the "same" as an Honorable.

I is the same. Sorry.

>I retired at age 65. Not a problem.

Not from the Armed Forces you didn't.

>There is NO one here who is "correspondence course trained," and
> you've had it explained about education adequately in a previous
> message.

"Explained" is one thing. "Believed" is another. Form YOUR conduct in this forum, I cannot accept that she is very competent nor observant of your behaviour.

>You continue with stalking, baiting, personal insults about my wife as
> well as about me.

I am not stalking. You post in a public forum. I respond. YOU bring up your wife, her education an alleged credentials. I respond. If you don't want that discussed here, then don't bring it Lennie.

>That is reprehensible conduct by any human being.

Let's see...YOU brought your wife into the forum. Who would subject a spouse they love to such ridicule knowing the nature of this forum (especially from the ay YOU act)...?!?!

YOU are in a forum of a radio service for which you are NOT a licensee and show great contempt for those that are...Who's "stalking" who?

You attempt to shine your brass on the deaths of Army servicemen who died in combat, then have the temerity to accuse others of "vaporous" service duties.

Yeah...something's reprehensible here, Lennie...but it isn't me.

>No. I make neither false statements nor "sttements"
> (whatever the latter is).

Lying about lying. That's funny.

>You cannot blithely label someone as a "liar" without showing
> proof of such "lying."

You (with the assistance of Google, and Deja before it...) do that for me, Lennie. All I need to do on any particular topic is refer you back to your own words. Got that Extra Lite yet?

>You are digging yourself deeper into a pit of fantasy existance that
> exists only in your imagination.

Got that Extra Lite yet?

>There are others in here as well as "inhere" who have the same
> affliction for Orwellian "Newspeak." They also want to call truth
> as "lies" when such truth does not fit their Beliefs.

My "Bleiefs" are that when you say something that is not truthful, it is a lie. Websters and several other sources prove me correct in this matter.

You have uttered numerous "mistruths" in this forum, thier many number being brought to light by numerous other persons. So who's digging who into what pit of fantasy existence?

>>>4. Robeson's military service was in the USMC, not the Army.
>>
>> I see...Only LENNIE can cross military roles and be accurate?

>
> I've had OVER 50 years of exposure to all branches of the US
> military...(SNIP)

Ahhhh...EXPOSURE! THAT makes you qualified on explicit details of all the services!

Now...Tell us about Navy And Air Force "MOS's" again...?!?!

>You have not. You should have known about the basic small-
> unit radio system in use in US land-air forces that has been
> operational for 14 years. You should have known about its two
> predecessors. You've not mentioned word-one about any of
> them.

Why? Are they germane to Amateur Radio Policy? PLEASE tell us one more time just how SINCGARS implementation is pertinent to Amateur radio policy?

>You've not mentioned word-one about the
> supplementary HF radio systems used by US military land
> forces (both USA and USMC) for several years yet you claim
> to have done so. All you've done on such mentions is to say
> you could not mention them in detail because those are "secret."

No, I have not. I have said I won't discuss such things furhter because they are not germane to this forum. Unlike you, I realize that my time in the service, while fulfilling and productive, were not contributory to Amateur Radio.

That I was on several operational missions that I was proud to have been part of was part and parcel of those years. That I cannot or willnot discuss them with you is irrelevent. That you think them "vaporous" is een more irrelevent

Besides, it ticks you off to no end that I won't contribute to your rant fuel, ergo it stays shelved!

I am not laughing with yuo, Lennie...I am laughing AT you.

>I've only made fun of your attempts at LIES, sins of omission,
> FALSE information, snow jobs, and fish stories you've done
> because there is NO verification or valid reference to any of
> your military radio communications claims.

So far all you can do is whine about my unwillingness to give up details. On the otherhand, you have given up details on things that gave you away.

>I will continue to expose your bluffing and lying, continuing to post
> references and true public data about REAL world radio
> communications.

If you think that somehow contributes to specific details about Amateur Radio policy, then it's YOUR time being wasted, not mine, Lennie.

>Your only references to radio seem to be QST
> or Popular Communications and "facts" from ham radio
> advertisements.

Gee whiz, and I thought this was ABOUT Amateur radio.

>>Kinda like your "Extra lite out of the box" comments, Lennie?
>
> Absolutely NOT.

Absolutely yes. You have lied about that for years now. A lie is a lie.

>Not only do you bluff and lie about overall radio knowledge and
> testing but your disordered mental fantasy cannot differentiate
> between situations of military service and amateur hobby
> activities.

I HAVE been in the Armed Forces and WAS a part of military communications for a part of it. I AM licensed in the Amateur Radio service and ACTIVELY participate in on-the-air activities and off-the-air programs and practices.

>Now, describe WHERE and WHEN those "seven hostile actions"
> took place and provide a reference to the validity of that claim or
> admit you were bluffing, lying, and stop with such tale-telling.

And how are they germane to Amatuer Radio policy, Lennie? How is ANY "military service" germane, unless you care to discuss MARS, CAP, SHARES or Coast Guard Auxiliary activities that may involve some number of Amatuer licensees...?!?!

>Your mental state is not rational, cannot differentiate between
> reality and the fantasy of your imagination.

Please tell us again how your years in the 71st are relative to what's going on in here?

>What I've said as to factual data and information is all, repeat
> ALL referencible.

Much of it is, to your credit...just enough for you to try and slide the baloney in between. We keep catching you with the baloney, Lennie, and that's what sinks you EVERY time.

>> Have you sent that letter to their families apologizing for using them
>as
>>opportunities for embellishing your own meager service record, Lennie?
>
> That's a disgusting little statement, unworthy of a rational human
> being let alone a veteran of the military.

HAVE you apologized to them for the cowardly use of their memory, Lennie? THAT is disgusting...not anything I have said to expose your horrific abuse of their deaths.

Enough for now, Lennie...I grow tired of your sillines for one day.

Steve, K4YZ

Ryan:

Well, motorcycles are fun, but they leave a lot to be desired in inclement
weather, and are not something I'd rely on for primary transportation.

Corollas are infinitely better than Geo's. Period. End of story. If you want
horror stories about Geo's and good information about the Toyota Corolla,
try the Owner's Forum at www.corolland.com (yes, "corolland" is spelled
correctly).

Hi Dan .... no difficulty with the wires ...just got off of 40 and I enjoy stuff that's a mile away as much as I do the DX ... not going to move the tower as it is not a fold over and it is at 50 feet which is about 47 feet too high for me. I have a fellow who is interested in the TH-6 and the tower but I am going to keep the rotor as I may put up a crank up -tilt over or a similar mast. Will try a quad this time if any. I did get a lot of use with this setup but I will be on. We will have to set up a sked Dan after I am in place at the new QTH which is about 20 miles south of here.

God Bless catch you on the air Dan ....Tom KI3R

in Ham
> radio.

Boy are you way off base. You took the quote entirely out of context. For one thing, the author of the article overall is talking about all the good things of ham radio.

Secondly the only item that he was talking about when he made this statement is that in India, the knowledge of the existence of ham radio is spread primarily by word of mouth mainly to friends and relatives. However notice that he did not say it was a cult only that it might be called that. And he did not indicate that he himself was prone to think that way. Nor did he indicate that he had ever heard any non-hams refer to it that way.

Third, the author has only talked to hams in India and only to a limited number there at best. There is no reason to apply the results of his interviews to the hobby in other countries. Matter of fact it can really be applied to hams in India as the sample is too small to be statistically valid.

Fourth, the author appears to have no personal background in amateur radio.

Sheesh, talk about trying to twist an article to one's own viewpoint, you sure try hard.

Dee D. Flint, N8UZE

Fifth, was this article originally printed in English or was it a translation from some other language. Translating is often inaccurate. There is nothing with the article to indicate what language it was compose in.

>I see. This is another version of "one definition for Vipul, another
>meaning for the rest of humanity".

No, its most of "humanity" that decides the definition, allowing for common
sense. The weird people, Hams, do not decide for themselves.

Common sense is allowed. For example an activity that has never been done
before may be innovative, not weird.

Oh but they do go after repeater interference.

March 24, 2003

Mr. Anthony L. Basile
RD 2 Box 164C
Cherrytree, PA 15724

RE: Warning Notice: Amateur Radio license N3HFB
Case #EB-2003-566

Dear Mr. Basile:

Monitoring information before the Commission indicates that you have been deliberately interfering with the N3HAO (147.39 MHz), KE3DR (146.655 MHz) and N3QC (146.865 MHz) repeater systems in your area. The interference has consisted, among other things, of keying the repeater repeatedly without communications.

Continued incidents of such interference to the above repeaters, or to any other Amateur communications, will subject you to revocation and suspension proceedings, as well as a monetary forfeiture. Fines normally range from $7,500 to $10,000.

We note that your license is due for renewal in September 2003. Until this matter is resolved, your license will not be routinely renewed.

Please call me at 717-338-2502 if you have any questions about this matter.

CC: Northeast Regional Director, FCC

And are going after any unlicensed operation in the Ten Meter Amateur Band

TO:
Chuck Skolaut, Field & Regulatory Correspondent
American Radio Relay League

FROM:
W. Riley Hollingsworth, Special Counsel
Enforcement Bureau

SUBJECT:
Unlicensed incursion into the Ten Meter Amateur Band

DATE:
April 28, 2003

This referral is made pursuant to Section 4(f)(4)(B) of the Communications Act of 1934, as amended, 47 U.S.C. 154(f)(4)(B), and the "Amended Agreement Between the Field Operations Bureau of the Federal Communications Commission and the American Radio Relay League, Inc. Regarding the Use of Amateur Volunteers.

We request the assistance of the ARRL Auxiliary in identifying, over the next 6 months (May through October), any unlicensed operation in the Ten Meter Amateur Band, whether from business entities including trucking companies, truckers or other individuals operating domestically. We do not request direction finding, but would appreciate, where possible, the names and cities of the operators, and license plate numbers and state if from a vehicle.

Please use your best judgment as to whether to include tapes, and please use case number 2003-583

Thank you

>> >> A child that doesn't know
>> >> CW is "not good enough".
>> >
>> >That'd be particularly true if the mode in use was CW.

Seems like you misunderstood. The child said this well before any contest began. He meant the other child was "not good enough" as a Ham for not learning CW. I was surprised to hear the child saay that.

I think you understood, but are trying to justify what the child said.

>> >Copying the exchange information correctly at high speeds through QRM or
>> >QRN is certainly the kind of skill which is useful in emergency
>> >communications.

> It is a good way to build
>skills needed for emergency communications.

Chance correlation of a few skills is not preparation. Emergency comm involves many skills, most of which are not used in contests.

This is dangerous if you actually believe that. Real emergency skills involve many elements which are not part of contests.

Or do you know that and are trying to mis-inform?

>Seems like one guy, if you are to be believed, said that to you.

He's one of the few non-Hams that knew enough about it to know its a cult. I'll be many spouses of Hams (that are not also Hams) also feel its a cult too.

Dave Heil found some Hams;
one that is thin,
one that is an EE,
one that is black,
one that is a woman.

Please not that these are exceptions. One can find exceptions in many groups. There are a high majority of Hams that fit a different demographic than these exceptions.

Also, for the overweight part, I never claimed a majority of Hams are overweight. Just that a significantly higher percentage of Hams are overweight than the general poplulation.

The Ham radio hobby has something to do with this. Please note that I met with <random> Hams. So, I had NO influence on whether they were overweight.

>I think this is more likely because Vipul has been corrected on his
>mistaken claims any number of times.

This is not a correction. Demographics does not mean everyone, just most. These are exceptions.

Yup. The Commission reacts strictly to "Safety-of-Life"
situations. Probably 99% of the clowns in this forum think that
means interference to amateur radio repeaters and Riley's
warning letters. Not up to me to educate the fools either, and
it's more fun to see them post stupid statements. It was once
estimated to a fairly accurate degree that 94% of all amateur
radio operators believe the FCC's sole mission is to regulate
amateur radio. Talk about tunnel vision and a limited view of
life!

>>>anything LESS than Honorable.
>>
>> Then why didn't you get an Honorable right away?
>
> I did, Lennie. Why do you keep asserting otherwise?

Because of your own words in here.

An Honorable Discharge is NOT the same as a Medical Discharge.

If they were the same then there would not be two different documents.

>> You've claimed your Medical Discharge was due to an "accident."
>
> Yep.

You can't have it both ways. Make up your fantasy mind.

You said you got a Medical Discharge first, due to an "accident."

Later on you said it was the "same" as an Honorable.

>>Nobody in here has verified that. Medical Discharges are also
>> given for psychiatric problems in the military service.
>
> Was that YOUR reason for terminating so brilliant a career?

I retired at age 65. Not a problem.

When I enlisted voluntarily in the US Army, ALL who entered Army service regardless of being a compulsory or volunteer, were contracted for an 8-year term. After an active duty period, the remainder of the 8-year term was spent in reserves.

>>> Again you've been caught lying. Why do you persist in lying?
>>
>> No lies from me.

>
> Oh? Your correspondence course trained shrink wife does this for you
>then?

There is NO one here who is "correspondence course trained," and
you've had it explained about education adequately in a previous
message.

You continue with stalking, baiting, personal insults about my wife as
well as about me.

That is reprehensible conduct by any human being.

>>Robeson insists on calling all statements contrary to his Beliefs
>> as "lies."
>
> Something is a "lie" when it's meaning is inherently false. You make
>frequent and obvious false sttements.

No. I make neither false statements nor "sttements"
(whatever the latter is).

You cannot blithely label someone as a "liar" without showing
proof of such "lying."

You are digging yourself deeper into a pit of fantasy existance that
exists only in your imagination.

>>That is abnormal behavior and doesn't require any
>> "degree qualifications" to understand.
>
> You're right. It doesn't. That's why I am not the only person inhere
>who calls you for what you are...a liar.

There are others in here as well as "inhere" who have the same
affliction for Orwellian "Newspeak." They also want to call truth
as "lies" when such truth does not fit their Beliefs.

>>> Hmmmmm....Nothing in any era-specific radio clerk training manuals say
>>>ANYTHING about "closing with the enemy".
>>
>> 1. I was never any "radio clerk" while in the US Army.
>
> Uh huh.

I'm glad that you are capable of some agreement, however slight.

Feel free to check with NARA on my Army service record.

Army Serial Number RA16408336

>>3. There are NO "radio clerk training manuals" to be found in
>> the US Army Training and Doctrine Command listings of
>> FMs, TMs, or other documents now, nor in the past.
>

> Maybe that's why you were so inadequately trained.

You have NO experience in military radio communications and
cannot judge what is adequate or inadequate in military
radio communications of the USA.

There were NO "radio clerk" MOSs in the US Army in the 1950s
or now. There were somewhat similar MOSs in the US Army
of the 1950s but those pertain only to NON-radio clerking jobs.

My training was adequate for all jobs that needed to be done:
Fixed Station Transmitter, Carrier Equipment, Radio Relay
and finally Microwave Radio Relay. All with combined operations
and maintenance at supervisory rank.

>>4. Robeson's military service was in the USMC, not the Army.
>
> I see...Only LENNIE can cross military roles and be accurate?

I've had OVER 50 years of exposure to all branches of the US
military, first as a US Army soldier-signalman for 4 years, then
as an electronics engineer on-site at many US military
installations, all branches, while working in electronics
corporations after 1956. I stay informed on many things,
factual data rather than emotion-driven fantasies of greatness
and play-acting...as you do.

>> 5. Robeson did not claim or imply any military radio
>> communications duties nor was he able to state any
>> military radio equipment by name or nomenclature,
>> formal or familiar.
>
> I have. You just choose to ignore it.

You have not. You should have known about the basic small-
unit radio system in use in US land-air forces that has been
operational for 14 years. You should have known about its two
predecessors. You've not mentioned word-one about any of
them. One of the two computer training aids in operation of the
basic US land-air radio system was written by the USMC and
has been in use at the Army's Signal Center at Fort Gordon for
at least 4 years. Both are and have been public release items
for that length of time. You've not mentioned word-one about the
supplementary HF radio systems used by US military land
forces (both USA and USMC) for several years yet you claim
to have done so. All you've done on such mentions is to say
you could not mention them in detail because those are "secret."
That's nonsense since details of name, nomenclature, general
details, manufacturer, contract award monies and duration has
been public knowledge since the first bids. Such has been public
in the USA as long as you've been alive.

> And what part of it you
>"acknowledged" you simply made fun of or tried to denigrate.

I've only made fun of your attempts at LIES, sins of omission,
FALSE information, snow jobs, and fish stories you've done
because there is NO verification or valid reference to any of
your military radio communications claims.

> Keep telling yourself that, Lennie. Repeat it over and over. It still
>won't make it any more accurate, but it will make you FEEL better for having
>done it, and that's all that counts.

I will continue to expose your bluffing and lying, continuing to post
references and true public data about REAL world radio
communications. Your only references to radio seem to be QST
or Popular Communications and "facts" from ham radio
advertisements.

>>Robeson stated that he had "seven hostile actions." Those three
>> words convey nothing definite. They are vague vapor.
>
> Kinda like your "Extra lite out of the box" comments, Lennie?

Absolutely NOT.

Not only do you bluff and lie about overall radio knowledge and
testing but your disordered mental fantasy cannot differentiate
between situations of military service and amateur hobby
activities.

Now, describe WHERE and WHEN those "seven hostile actions"
took place and provide a reference to the validity of that claim or
admit you were bluffing, lying, and stop with such tale-telling.

>>No. I've stated no lies, committed no "misdeeds."
>
> You may continue to repeat THAT to yourself too, Lennie...And it still
>won't make THAT any more accurate either.

Your mental state is not rational, cannot differentiate between
reality and the fantasy of your imagination.

What I've said as to factual data and information is all, repeat
ALL referencible. I've given such references in here, continually
since I began posting. Some are not easy-to-get-at references
but can be found and verified. I try to limit references to the
easiest to "get at" in the form of websites...for others to verify
for themselves.

As to OPINIONS, those vary with individuals and one person's
opinion is no more "valid" than anothers. You apparently cannot
understand that since you constantly express your personal
opinion as "truth," thereby making opposite opinions "lies." That's
a fantasy, a mental problem common to all self-righteous people
who refuse to accept other points of view.

You constantly confuse factual data with the fantasy of your own opinions.

>>I have all the names of the 71st Signal Service Battalion personnel
>> who were casualties...(SNIP)
>
> I am sure you do.
>
> Have you sent that letter to their families apologizing for using them as
>opportunities for embellishing your own meager service record, Lennie?

That's a disgusting little statement, unworthy of a rational human being let alone a veteran of the military.

I've honored their memory, not only in words but in military ceremonies such as Retreat (lowering of the US flag at sundown).

My US military service record is archived at NARA. It is detailed, honest, no lies, distortions, or untruths. There is not the slightest condemnation by anyone or any agency in it. It is not extra-ordinary but it does indicate I received promotion in rank almost as soon as I was eligible after time-in-rank. Thousands after thousands of us served in the same signal battalion, doing our duty during a time of active war followed by uneasy truce, then continuing with our lives afterwards. I've been in communication with five of those veterans since, plus one civilian employee of the Army, later the Air Force, for shared interests in a single small organization and the part it played in the larger world of radio communications...and some kinship of all contributing to the sucesses of our tasks. We did no Great Deeds, were not deserving of high battle-won medals of valor...we just did our jobs well, did them as required, kept the communications running "24/7" for years, serving our country.

None of us, Army or Air Force or a few civilians, are worthy of the condemnation, hatred, bitterness, and contempt of others who came later or were never in the military service.

>>Without any references, vague vaporous statements are nothing
>> but LIES.
>
> If you insist, Lennie. While were at it, we're still waiting on YOUR
>"extra lite" to show up on the database.

Not a requirement to serve one's country in any future.

US amateur radio is NOT a military service, never was.

There is NO "extra lite" in any "database" other than some brewery.

Robeson has NOT supplied the WHEN and WHERE of his claimed "seven hostile actions." If he does, then he must provide references where anyone can verify his claims.

No references, no validity mean just LIES, exaggerations,
fish stories, snow jobbing.

I don't think so. By four years of nearly uninterrupted posting, he defends only Himself and His Viewpoints.

He only accepts those who think alike with Him.

With such an attitude anything He does is "noble," but only to his imagination.

You are welcome.

Brush Fire Season is 12 months out of the year in here, always
a lot of flames. :-)

We can always see ham sizzling on an open fire after he
(or she) opens fire. :-)

As I said before. Either that adult was wrong or you didn't hear it right. There is a time a place for collecting 10-10 numbers. And it does fit proper Ham traditions. The 10-10 club and 10-10 numbers are some of the older traditions of ham radio.

Anyone know of any good Ham radio urban legends?

Heres three. I don't know if they are true or not. Also, I don't know if they are Ham radio urban legends or not.

1. Wouff Hong was heard in some CW message. This is definately a Ham radio urban legend.

2. I dont remember this one exactly. Heres what I remember. A few details may be incorrect, but the point of the story is the same.

A Ham's brother was going on a trip. He turned on his rig. He heard mostly static. Like seing figures in the clouds, he heard something that resembled: "don't take the trip". Another operator, said that it could sound like that but it probably was just static.

He called his brother and left a message on his cell phone. The brother, heard the message and decided not to board the plane.

Later, the plane was hijacked.

3. I dont remember this one exactly.

One young Ham got into a car accident. He radioed for help. An older Ham helped him and took him to the hospital. The young Ham never saw the older man, but dropped an identity card.

Years later, the older Ham got into an accident. He radioed for help. The Ham that came to his rescue was the young Ham that got into an accident before!

skills, most of which are not used in contests.

I'm not talking about chance correlation. I'm talking about skill
building. I don't think you have enough experience in either contesting
or emergency communications to put up a rational argument.

> This is dangerous if you actually believe that

I really do believe that and it has not proved dangerous. What
practical experience in either thing do you have which lends proof to
your claim?

> Real emergency skills involve
> many elements which are not part of contests.

Who told you about them?

> Or do you know that and are trying to mis-inform?

You're already misinformed. I couldn't possibly do a better job of misinforming you than the individuals responsible for your current outlook.

> >Seems like one guy, if you are to be believed, said that to you.

>
> This is not a correction. Demographics does not mean everyone, just most. These are
exceptions.

For there to be exceptions, you'll have to offer something in the way of
proof that your claims are true.

So far, you're a guy with very limited experience as a ham--a guy who
doesn't appear to know very much about amateur radio. You also seem to
actively dislike amateur radio. You're getting about as much of an
audience for your strange views as you've reported getting at amateur
radio club meetings you've attended. You're the odd man, Vipul.

That might be part of your problem. I don't know of anyone doing much
direction finding at Field Day. Some hamfests have direction finding on
the program but not all do. A "random Ham gathering" would likely be
for random direction finding.

> I met up with a group
> of <random> Hams about a week ago and they were much the same way.

All standing around and not direction finding?

Incorrect. "Radio physics" is only one consideration in regulation-making.
Otherwise amateurs would be allowed to use the same power as SWBC stations.

>>Did the "radio physics" of phasing-type SSB change from 1932 to 1978?
>
> Absolutely...and all the way to 2001 with the merger of the
> four-channel CMOS switch (Tayloe Mixer) and the Gingell
> polyphase network.

Incorrect. The technology was improved, but the basic physics did not change.
The Gingell network, for example, is simply another way of getting the required
90 degree phase shift. It offers greater unwanted-sideband rejection, less
precision requiured in the components and less loss than, say, the Dome
network. At a price of increased complexity.
>
> You are apparently unable to "see" the evolution because of

What about the avalanche of boorish, insulting, puerile, snarly, sarcastic name-calling from no-code test advocates?

I've been reading this ng since late 1997. There's as much nastiness on one side as the other. Looking back at your old posts, I note a very low level of civility back then. Same as now.

Your paragraph shows that you very much *do not* understand contesting.
10-10 numbers are not related to many contests.

Question: what is a 10-10 number?

> A child that doesn't know
> CW is "not good enough".

Check out a contest and let us know what the majority of the traffic is,
CW or SSB.

The use of codewords as some kind of agreed upon
> tradition. Plus many more examples.

Why not give us a dissertation on:

Why hams are not allowed to use buzzwords when all other groups are?

When was the last time you heard something like "I put new RAM in my
CPU, then defragg'ed my HD? And did you see my new USB CD/RW and Zip?"

Elaborate on how *that* little bit of nonsense above, which is
understood by many computer jockeys, is different than a ham calling CQ?
How about an alternative to CQ?

There are some (many) hams who do not like the 10-10 number business.
Larry Roll for one. There are some hams who will chew another ham out
over not having one, and some won't even talk to another ham if they
don't have one.I've heard a public dressing-down or two. I'm not overly
wild about it myself, as while the idea sounds okay, the implementation
has become one of exclusivity. So that may have been what the one ham
was talking to the other about.

but..... I didn't catch your other answers!

What contest was it?

What were the "improper" contacts?

I still think you are making your conclusions on some shaky evidence,
Vipul.

>An Honorable Discharge is NOT the same as a Medical Discharge.

Try this one instead, Lennie...it's more accurate:

"I do not fully comprehend the current practices of the Armed Forces of
the United States as it pertains to character of discharge or reason codes. I
do not understand that it IS possible to be honorably discharged from the Armed
Forces of the Untied States due to medical reasons."

This one's a bit briefer and to the point:

"I am an idiot who tries to compare present day military policies to what
I knew over 50 years ago. I am a fool."

>If they were the same then there would not be two different
> documents.

They are not "two different documents". One DD214. One Honorable
Discharge. One medical validation code.

>>> You've claimed your Medical Discharge was due to an "accident."
>>
>> Yep.
>
> You can't have it both ways. Make up your fantasy mind.

I don't have to "make up" anything, Lennie. I was Honorably Discharged
due to medical causes.

> You said you got a Medical Discharge first, due to an "accident."
>
> Later on you said it was the "same" as an Honorable

It IS "the same". You may ask your VA rep.

I'd go on...but why? You've already made a fool of yourself and are only
making it easier for me to poke holes in you with each retelling.

Thanks. I needed the laugh. It was a rough shift.

Or lack of equipment and/or manpower. 15 years ago the Army had
man-portable (backpack) scanner/DF rigs (AN/PRD-12). Put out 3 of them
and they'll automatically DF and triangulate to give you the
transmitter's coord's in seconds. No doubt they have even better now.
Does FCC have any? ????

Absolutely! If he *is* seriously interested in the ARS, then he needs some instruction in the social graces. Coming into a room and calling the occupants cult members, fat, old, antisocial, and what they do boring is a good way to get their attention. It is not a good way to get them to change their erring ways.

It could if we made it that way. Tar and feathers were not uncommon in my youth but practical jokes were preferred at Compton High (Between LA and San Pedro): pouring a tablespoon of gasoline down the miscreants crack and lighting him off worked wonders. After all, FCC keeps telling us to police ourselves, right? (c:

Going to a club meeting and telling the members that they don't know anything technical except maybe about antennas is the sign of a socially unskilled individual. Letting them know that you think they ought to be homebrewing and designing circuits instead of operating is a mark of the socially inept. Referring to some members as "only coders" probably doesn't go over well. Showing up at Field Day and complaining bitterly about not being able to exchange 10-10 numbers marks one as a social outcast.

For a graphic illustration, fill a saucer with cold tap water. Sprinkle black pepper on the surface of the water. Let the black pepper represent the club members. Now place a drop of ordinary dishwashing detergent in the saucer. Let the drop of detergent represent Vipul's entrance. Observe carefully. (Thanks to Don Herbert in his "Mister Wizard" persona in the 1950's)

One can "socialize" where one want's to. It's all a matter of desire and initiative.

Ham Radio has been a great ice breaker for me in several countries, especially Japan. It's also opened doors for me all over the United States. My most memorable times were in Pennsylvania. Their license plates used to say "You've Got A Friend In Pennsylvania", and it was true...all-the-more-so if you happened to have Ham Radio with whcih to "say hello" with.

I left out his name because it's none of your damn business or anyone
else on here. BTW, this person was world famous when this happened.
Everyone and his sister heard about it. So fuck you, and the gimp
queer horse you rode in on. Don't get rectal with me. I'll slap the
shit of you. Your teeth will rattle around your skull. I hate a
fucking smartass like I would a case of herpes.

Ditto with amateur

Post proof? Again, crouch down and nurse my lizard you smartass
cocksucker. All the cases I've mentioned are in the F.C.C logs, RAIN
report, and every other frigging report on the net concerning fcc
busts. Do your own homework, you poster child for smartasses. I would

have posted links for these , if you didn't have such a smartass attitude. But being you do, fuck you and the horse you rode in on. I don't post lies, fibs, and other assorted horseshit on these NG's. If I say something like that, you can take it to the frigging bank. MK

Being you are here in town, just go over to the 145.47 repeater and ask them about the "supposed phony" repeater squirrels I previously mentioned. Then come back and let these people in on what they told you. Also the 11m freebander I mentioned is here too. I almost bet $$$ you've heard about it. BTW, he did have a legal ham call, although the infraction was in the freeband and in between "channels" in the regular "CB" band. BTW, I could give a twinkled shit what the fcc does. But I do give a shit when a bunch of twinkle toed cocksuckers call me a liar. If I'm a liar, prove it first, before spouting horseshit. "this mainly to the other smartass that I've already replied to". And BTW, I do not fall in your "94%" bracket. I don't need the fcc to do my dirty work. Amateurs are for the most part "self policing". The only time the fcc needs to be involved is when we catch one, and need them to verify, and then an agent and a federal Marshall to serve the warrant. Going around to peoples houses trying to shut down squirrels is a good way to get shot if you don't use "legal" methods to do so. MK

If they do, do you think they're going to advertise?

Put it another way - FCC comes into town, makes a big hoopla, finds nothing, disappears. Violators think it's a big joke. Except they don't realize that the folks in the monogrammed hats and marked vehicles were all for show....

It isn't any better for amateurs to cast themselves as "superior"
to those with more experience in radio or are professionals in
that field or both.

Passing a few amateur tests and getting a callsign all your own
for your very own station may be a personal accomplishment,
perhaps a significant one in your life experience...but carrying on
in a pretense of being "superior" in everything, including the
"social graces," doesn't make such a pretense either acceptible
or superior. Look to the "socially graced" others in this news-
group as a microcosm of such "social" behavior.

Well, Gollies, Len, no doubt it really *does* burnish your tail when you think

that the very lowliest Novice (left over from the pre restructuring days)
is fully authorized to build, own, and operate at will his own personal radio
station, on a quite wide range of frequencies. You, on the other hand, are
relegated to nonstop reminiscing on your 50 year old military duties during
which you baby-sat some less-than-interesting routine circuits on a few
discrete frequencies. You are not, and never were, licensed to do anything real
in radio other than that which your employer directed.

No wonder your bowels are in a continuous state of uproar. I believe you have
every reason to suck on all that gall.

>
> Passing a few amateur tests and getting a callsign all your own

> or superior.

We must always come back to that resounding fact, mustn't we? The most lowly,
unlearned Novice * is* your superior.

You might want to reconsider that premise, Mike.

>> Coming into a room and calling

>Please prove that these are one-time exceptions. I'll be waiting for
>some solid fact from you. It will be a refreshing change of pace.

It is apparent from attending Hamfests and club meetings. Almost every one I attend seem to confirm this.

>> One can find exceptions in many groups.
>
>You've offered no proof for any of your rather silly claims.

Neither have you.

>> Just that a significantly higher percentage of Hams are overweight
>> than the general poplulation.
>
>...and you are offering what as proof of your statement?

One can see this at Hamfests. Also, note that I joined some <random> Hams. I had nothing to do with selecting them. I was on the email list. My reason for attending was that they had several radio modes I could use.

Random, therefore unbiased - do you understand?

>I'm pretty sure that after a half hour conversation with you, I'd be
>ready for a large pizza and a couple of milkshakes.

They clearly had their condition well before they met me.

>Going to a club meeting and telling the members that they don't know
>anything technical except maybe about antennas is the sign of a socially
>unskilled individual.

Your right. If I ask them "Why are most Hams fat?" first. I doubt, I will be able to ask any of the other questions.

I did say "I am not a Ham" in person. Also, I asked "What is the meaning of Ham radio, I dont get it?".

>Letting them know that you think they ought to be
>homebrewing and designing circuits instead of operating is a mark of the
>socially inept.

Aren't suggestions, on what people should be doing, done all the time at meetings? If so, why are my suggestions bad?

>Referring to some members as "only coders" probably
>doesn't go over well.

Never said that about any members.

>Showing up at Field Day and complaining bitterly
>about not being able to exchange 10-10 numbers marks one as a social
>outcast.

The event I went to was last week. Last week was not Field Day.

I did not complain about not being able to exchange 10-10 numbers. Actually, I never heard of them until then. The child said he was trying to get his 10-10 at the same time. Then, the adult told him not to try for that award.

At first, one can assume that it would slow down the contest. Then, the adult explained to ME that 10-10 numbers were not desirable in any situation, contest or not.

>Let the black pepper
>represent the club members. Now place a drop of ordinary dishwashing
>detergent in the saucer. Let the drop of detergent represent Vipul's
>entrance. Observe carefully.

Wrong. I got an email expressing that it was nice for me to attend, and I was invited to attend the next such event.

Yes, actually this was not the main emphacis of the event. Also, when the child said the other child was "not good enough" for not learning Morse code, probably was something children say and not typical.

Overall, they were a nice group of people. I got to operate a few different modes and saw the area. It was pretty fun and I would attend the next one if I am not busy.

From Mike KB3EIA

>When was the last time you heard something like "I put new RAM in my
>CPU, then defragg'ed my HD? And did you see my new USB CD/RW and Zip?"

I dislike IT types more than anyone. Unfortunately, they have taken over society and lowered the quality of life, meaning one's experiences.

Individual desires and aspirations are now less important than managing and being part of the infrastructure. Unfortunately, they have been made to believe they are superior because of this, when actually it is the opposite.

Also, some of them seem to apply their beliefs as to what everyone should do. Others try to draw people into their group. Still others end up there because of the overpowering of the system.

Like a black hole, some are forced there. Still others are often "lost" in the machine.

Nobody went to Vipul's place of business or his home or to the place
where he gathers with friends in order to cast aspersions on him. You
seem to think that their is a rash of incidents where radio amateurs are
seeking out electronics or communications professionals and letting it
be known that the world of amateur radio considers them lesser beings.
Don't base everything on what you experience. You're special.

> Passing a few amateur tests and getting a callsign all your own

> group as a microcosm of such "social" behavior.

You're the gnome who came to a newsgroup where radio amateur congregate in order to tell them what is wrong with amateur radio and to make certain that all are aware that you know what's best for amateur radio. Your attitude doesn't seem to have won you many supporters in the past seven years. A smart fellow would have changed his tactics.

So you have seen the people I mention but no others who would be
different than the claims you've made? Maybe you've never seen anyone
who is other than fat, old, etc. Maybe you've attended only one or two
club meetings or hamfests.

> >> One can find exceptions in many groups.
> >
> >You've offered no proof for any of your rather silly claims.

In forty years, no one has ever come up to me at a radio club meeting
and told be that I shouldn't be DXing but that I should be designing
circuits. Not once.

> >Referring to some members as "only coders" probably

But you do it here, Vipul! Why? How does one's dietary or aging demographics impact Amateur Radio policy?

Is there some metabolic dysfunction that I am unaware of that predisposes men to one thought on radio policy, but predisposes women to another based SOLELY on age/gender/weight?

And since when is there a "proper time" to be rude, obtuse and irresponsible?

One word. "Quickfix".

Usually deployed on Blackhawk helicopters to simultaneously track and / or jam radio sources in the battlefield. Very fast, linked to AWACs aircraft. Worked on them during conception, build and deployment in the late '80's - early '90's. I imagine they have much better stuff now.

You'd be lucky to not sustain some blunt trauma to the orifice from which
teh comments emminated.

>I did say "I am not a Ham" in person. Also, I asked "What is the meaning of
>Ham radio, I don't get it?".

In other words you intentionally lied.

Uh huh...

> >Letting them know that you think they ought to be
>>homebrewing and designing circuits instead of operating is a mark of the
>>socially inept.
>
>Aren't suggestions, on what people should be doing, done all the time at
>meetings? If so, why are my suggestions bad?

Suggestions are one thing. If you present your "suggestions" even half as
rudely or arrogantly as you do in here, it's a wonder you are not

personna-non-grata on all the local repeaters. Perhaps you are?

>>Referring to some members as "only coders" probably
>>doesn't go over well.
>
>Never said that about any members.

Sure you have, Vippy! You've done it repeatedly in this forum when whining about how "only coders" somehow control and "force" their way on other club members.

If theya re NOT "members", how is it they ahve any sway with the club...?!?!

>>Showing up at Field Day and complaining bitterly
>>about not being able to exchange 10-10 numbers marks one as a social
>>outcast.
>
>The event I went to was last week. Last week was not Field Day.

It's been more than last week, Vippy...You've been whipping this pony for two weeks already, and your comments have all placed the "event" past tense. Ergo whatEVER contest you allege this happened in was at least a month ago.

I say it never happened. You refuse to name the contest, the name of the club you were allegdly participating with and the callsign that you operated under.

In other words, you are making it up...You use emotion-grabing fodder of a "child" being verbally taunted by a tradition-laden elder, then try to make it believeable.

>I did not complain about not being able to exchange 10-10 numbers. Actually,
>I
>never heard of them until then. The child said he was trying to get his 10-10
>at the same time. Then, the adult told him not to try for that award.

I still think you are making it up or quoting it out of context. I am willing to bet the kid tried to exchange a 10-10 number inappropriately and was redirected by the "adult". You still do not cite the contest, other operating parameters, etc...

Without this, your story is nothing more than that...a story.

>At first, one can assume that it would slow down the contest. Then, the adult
>explained to ME that 10-10 numbers were not desirable in any situation,
>contest
>or not.

I see...One man's opinions on HIS interests (obviously NOT award chasing) now shape all of YOUR opinions on what Amateur Radio is all about...?!?! GET A LIFE!

>Wrong. I got an email expressing that it was nice for me to attend, and I was
>invited to attend the next such event.

No doubt from The Lighthouse for the Blind.

Anybody monitor nightly net on 3860? Many call
signs being used are unassigned. Several call signs
being used are legit but not being used by the assigned
licensee. What gives? QSOs always revolve around
politics. Up to 30 or more stations check in, probably
20 bogus calls. Where is FCC? Riley? OOs?
Where is the much vaunted FCC locating technology?
Why is this allowed to continue?

Unless there are other factors involved that would warrant a discharge other than honorable, a medical discharge is an honorable discharge, Len. The DD Form 214 says "Honorable" with a code describing the reason for discharge. My wife was discharged for medical reasons. Her DD-214 says "Honorable."

They haven't used vans in years, actually decades, cept for a microwave
van. Another hint. The vehicles they DO use, contrary to popular
belief among hams, do not have antennas sprouting out all over. And
don't look for government license tags. There's more, but I will
leave that to the active imagination hams have. I am an engineer
at a TV station and was afforded the opportunity to examine
one of their vehicles at a trade show.

FCC is complaint-driven. No complaints=no enforcement action.

FCC wants tapes of alleged violations with time, date, frequency, mode and any other available info such as direction and signal strength before they investigate.

Have you or anyone else complained to the FCC and sent them tapes?

How can this be?

If true, it means that Len is WRONG!

Which, as Len keeps telling us, is impossible.

Maybe I should state it a little different, Jim. If he wants to effect
some change in what he sees as deficiencies in the ARS, he should do it
in a manner that doesn't insult the people he is trying to influence.

Social graces are always recommended.

>>>Coming into a room and calling

Attention for it's own sake is something that should be outgrown by
the time a person is six y.o. IMO. Obviously the profliferation of hair
dyed with Kool-Aid, pierced tongues and tatoos tell us that that isn't
always the case. It does not mak it untrue however! 8^)

Not all of them. I liked to tell CBrs that I'd seen an FCC van. They'd
panic and hide all their "killer-watt" linears and mod'd CBs for a day
or so. So, in that sense FCC put them off the air, albiet very
temporarily. "What's that FCC van doing parked down the block from you?"
gets great responses.

>station, on a quite wide range of frequencies.

Not a problem today or 20 years ago for me. All one needs is money
and some place to put an antenna. Many, many businesses around the
country and the world sell ready-made radios for most any radio
service, professional or amateur. One can buy the antenna, even hire
someone to assemble and erect it...the only stoppage may be some
local zoning laws and codes.

I've already owned, operated, and licensed three different two-way
radios not in amateur radio. One of them AS "employer" in a
partnership. Operating takes special talent, knowledge, or
experience? Hardly. Turn up the volume, listen, push a switch
button and talk.

"Build" a problem? Certainly not. I can DESIGN electronic
equipment all the way from conceptual ideas on paper through all
the required details of circuit and component selection, assembly,
alignment, testing of everything to more and tighter regulations
than is found in amateur radio. I've done that. I had a whole
working career doing that, got paid fairly well by corporations to
do that on a regular basis. I'm still doing that for myself.

"Wide range of frequencies?" US amateur radio is LIMITED to
certain bands above 1.6 MHz. US amateur radio constrains
itself primarily to just the HF bands where the olde-tymers hang
out playing contest games and hanging out with their olde-tymer
buddies. VHF, UHF amateur bands are occupied overwhelmingly
by ready-made equipment users who barely venture into the
microwave bands unless they can get ready-made equipment to
work there. I've already worked from VLF on up to Ku-band at
24 GHz on R&D for both commercial and government contracts.

US amateur radio MAY be granted a "new" HF band near 5 MHz
and one small slice of a band at LF in the future. That's not yet
accomplished. Europeans have had a LF band(s) to play with
for amateur use for years. ARRL pestered the FCC for a limited
number of amateurs to "test" the proposed 5 MHz band in the
1990s...as if that band is "new frequency territory" never explored
before in the 60 year past of HF radio propagation by all the other
HF radio service users.

Tens of thousands of US telephone subscribers use 2.4 GHz
cordless telephones every day...hundreds of thousands (perhaps
even millions) of US cellular telephone subscribers use cellular
telephones at the 1 GHz cellular band every day...all without any
FCC license or training in two-way radio use or special education
or practice in the gracious, noble art of morsemanship. Tens of
thousands of radio clocks automatically tune to 60 KHz WWVB
time signals in the US every day and correct themselves to the
exact second, even automatically adjusting for time zone and
daylight savings time.

There are tens of thousands of WLANs operating every day in the
USA plus hundreds of thousands of short-range transceivers
operating on three bands that extend on up to 5 GHz. None need
special licensing from FCC to operate and certainly not any skills
of morsemanship. Keyless automobile locks operate every day in
the USA to lock and unlock vehicles through little UHF key-fob
transmitters. No driver needs an FCC license or morsemanship
to do that.

>You, on the other hand, are
>relegated to nonstop reminiscing on your 50 year old military duties during
>which you baby-sat some less-than-interesting routine circuits on a few
>discrete frequencies.

"Nonstop reminiscing?" :-) I tried to make a point that the entire
US military was NOT using morse code for long-distance radio
communications message traffic a half century ago. Carroll would
not listen...he never had such an experience, didn't do any such
regular HF radio communications during his short, conscripted
military service days...never explored HF radio fully with his amateur
equipment, didn't know anything other than amateur radio and some
alleged Missouri state police "CW nets."

"Baby-sitting?" :-) Each operating team at ADA was responsible
for the continuing operation of 36 (at first) to 43 transmitters ranging
from 1 KW to 40 KW in power output at HF operating 24/7, using
a two square mile antenna "farm." Each transmitter, all the exciters,
every bit of communications equipment received periodic
maintenance done by team members and a handful of Department
of the Army civilians. There was an average of about 3 frequency
changes per transmitter per 24 hour period, each QSY requiring
confirmation of exact frequency as measured by the receiver site
frequency standard over 20 miles away...reported over the closed

TTY net linking all nets. QSYs were required to be as short as possible to minimize downtime in a 24/7 environment. Average time of QSYs was less than 3 minutes from initial written TTY command to final frequency standards confirmation on the same TTY net. Each QSY required a change of crystals in the exciter, retuning the transmitters (heavy-duty tank coil link changing in 10 KW BC-340s and 15 KW PW-15s), setting the Mark and Space frequencies to beat with frequency standards' separate audio line using temporary "Fox Test" keying from Control, waiting for frequency standards' final confirmation on the TTY.

"Less than interesting routine circuits?" The whole purpose of the 24/7 worldwide communications network of the US Army and other branches in the 1950s was to make communications as reliable as possible regardless of propagation conditions around the clock. I've never added up the total of all communications channels carried by ADA at that time...off the cuff estimation is over 100 TTY, voice channels and a once-in-a-while FAX, all transmitted at the same time. Majority was TTY and about a fifth of those were encrypted, not monitorable by standard TTY machines. The bulk of communications traffic was "routine" for all the various necessary communications of a very large army that had to take care of itself and be available for any military action at any time. The "Cold War" had begun.

From 1952 to 1956 was not a "routine" time in the US military. The permanent truce condition in Korean War was not reached until July 1953. The French lost their colonial war in French Indochina despite US material aid (ADA had multiple RF circuits to the US Saigon MAG at the time). Sporadic fighting between Communist China on the mainland and Nationalist China in Taiwan kept occurring over the Quemoy and Matsu Islands. The civil war in Indonesia between communists there and everyone else was just beginning...that would kill over 6 million Indonesians. The USSR had acquired nuclear bomb capability and Joseph Stalin died, creating a temporary vacuum in that regime. The Berlin airlift was over but the communists isolated the two Germanys. SAC had begun the regular loiter flights up to the USSR border, armed, but never had to follow through on final mission orders.

At ADA we got to learn a few details of that behind the scenes, so to speak while monitoring circuits for operation (required to insure reliability). We got bits and pieces of information as it was communicated. Not a great deal of it...too many circuits to keep a constant check of everything.

"A few discrete frequencies?" ADA, like all large military transmitter stations then, had a large choice of frequencies, all of them crystal controlled. There were about 150 separate quartz crystals in a floor-standing tall cabinet with warming lamps inside for all the non-SSB transmitter exciters. That was vacuum tube

days and the insides of radio equipment was hotter than free air. SSB transmitters were all preset-tuned, servoed, with their own quartz crystals, about 6 out of 10 possible frequencies loaded, separate from the TTY and voice transmitter exciters. The first frequency synthesizers would not be around until about 1965 after the USAF took over ADA from the US Army in 1963. ADA had two exciters built by Northern Electric which could "VFO" to frequencies not yet lockable by crystals. ADA also had equipment to do minor regrinding of quartz units if that was necessary...only done twice that I know of, not done by me.

Did I mention the USAF HF station at Funabashi? :-) Army had some equipment up there, also beside Tokyo Bay, some personnel from the 71st Sig Svc Bn were TDY there. USAF closed that down around 1965, moved over to the old ADA site at Kashiwa with its antenna farm built over a former airfield. That closed down in 1978, HF no longer needed in the US military for a primary radio communications medium. Who knows, maybe the State Department got some "surplus" gifts of radios to use in African embassies? :-)

>You are not, and never were, licensed to do anything real
>in radio other than that which your employer directed.

I was my own employer for one of my licensed radios. :-) Directed myself.

Define "real radios," Dickie. Are ready-built HF ham transceivers the only "real radios" in your mind?

I'd already converted, modified two separate HF rigs out of ARC-5 military surplus in 1948-1949, tested them as best I could with equipment at hand and knowledge available then. Sold them both to local radio amateurs at a tiny profit, never used them on HF.

I figured out a VFO modification for a friend of mine for his new Gonset G-76 in 1961. G-76 wasn't designed for VFO on the top band then. Strictly a hobby activity, Dickie.

I could talk about some CB activity and having all 23 channels under crystal control before there was ready-build CB gear to do that...but I doubt you call CB as "real radio." :-)

> No wonder your bowels are in a continuous state of uproar.

Only when I drive down to Mexico and drink the water. :-)

>I believe you have every reason to suck on all that gall.

That depends. Ever have an all-day sucker, Dickie? :-)

>> Passing a few amateur tests and getting a callsign all your own
>> for your very own station may be a personal accomplishment,

>> perhaps a significant one in your life experience..
>
> Well, you'll have to take someone else's word for it, won't you?

Right! But I don't "have to take" fish stories, exaggerations, lies,
and snow jobs as "truth," do I? :-)

> We must always come back to that resounding fact, mustn't we? The most
>lowly, unlearned Novice * is* your superior.

Hmmm...I know only one Novice licensee now. He's run a part-time
computer sales and consultation business since around 1985 or so.
Not quite "unlearned." Was one of the 10 first BBSs in the USA,
starting with his own-built PC and own-written software. Full time
work in the entertainment industry as a TV Director, winner of two
Emmys for TV Direction. He is my superior in general PC skills.

I'll call any skilled morseman my superior BUT ONLY IN
morsemanship. No other skill, Dickie, except mean-spirited
name calling which you sporadically show as your masterwork in
here. I'll acknowledge you as my superior in mean-spiritdness.

Somebody in here used the quote, "it ain't bragging if ya done it."
I've done what I say I done, Dickie, have the proof. Now go work
some DX on HF with CW, leave the mean-spirited messaging to
your PCTA buddies...they are YOUR superior in that department.

Must be the "New Beaurocracy" then. MY DD-214 only says it is
for separation from active duty. MY Honorable Discharge didn't
arrive as a "DD-214" but as another certificate and then four years
later by mail in 1960.

Keep up the good work on that SSB VHF transceiver design...

No, I've seen a few exceptions.

>Maybe you've attended only one or two
>club meetings or hamfests.

I have been to 4+ Ham radio clubs, Hamfests in MA,NH,CT. Also, I've heard Hams
in many states while on long weekend trip.

>I offered specific callsigns and names. Would you like a list of others?

Surveys have been done. Eham survey indicated high percentage of fat Hams.
Interest surveys show Hams are more interested in antennas and Morse code than
electronics.

QST articles represent what most Hams are interested. This is further confirmed
when attending Ham club meetings or in Hamfest topics.

>I'll bet I attend a lot more hamfests and club meetings than you.

You probably have been to more such events than me.

>I
>have seen nothing to support your nonsense.

I can tell you what I saw. Perhaps you are more like the typical Ham so you
don't see that.

>> I
>> had nothing to do with selecting them. I was on the email list. My reason
>for

>on what you say took place.

There is a painting. Up close, it looks like several blotches. You look at one, then you look at another. I presented one, then another. The picture dosen't look like anything.

However the artist made the painting such that if you looked at it from a distance, you would see the picture.

>> Wrong. I got an email expressing that it was nice for me to attend, and I
>was
>> invited to attend the next such event.
>
>Those are some exceptionally polite people in that club.

Yes, they were nice people. Also, I was polite to them throughout the event. It was a fun event at a very low cost. I would attend the next one, if possible.

Ham radio must lead to these conditions if more Hams have them. If more people were interested in radio direction finding or electronics, there would be less overwieght Hams.

>Have you or anyone else complained to the FCC and sent them tapes?

And who has used some political leverage to get the existing
roadblocks to proper FCC field enforcement functioning removed?

The critics here and elsewhere ridicule the FCC for not doing
anything or not doing it right or not using the latest
whiz-bang gadgets that DoD and the spook services have.

It's certainly not the fault of today's field agents who want
to do a good job and are not allowed to.

Can't do anything about those problems with no money, no
authority to hire any more agents, a Congress that thinks that
the FCC exists only at The Portals Office Complex and should
ask "how high" on the way up when it tells them to jump, and an
FCC executive management that grins and says "yessir" "yessir"
to them and does nothing about getting more field staff, more
and better equipment, and the cojones that it once had.

I'm glad that I retired when I did - the slide downhill had
already started. They can call me and the rest of the 1995
exodus back as willing consultants when the "Eighth Floor" gets
serious about being an enforcement agency again. Right now the
"Eighth Floor" is more concerned about giving its authority
away than strengthening it.

It's a much older story than that! Goes back to the 1930s at least. Version I first heard had the owners of a power plant bringing in an expert from far away to fix an engine that wouldn't run. Expert listens to the symptoms, asks for a ball pein hammer, descends into the innards of the great machine and hammers for a few seconds.

Comes out, they try the engine, runs perfectly. Bill is for $5000 - $1 for hammering, $4999 for knowing where to hammer.

Although it's an old story, it's still very relevant. Just like Morse code ;-)

Yep, that's all there is to it. On-off, volume, squelch, PTT. Maybe you should join Vipul for a cold one and discuss strategy. You obviously are every bit as clueless. I sit here looking at an Icom 756 that has 65 knobs, pushbuttons and controls and three input/out ports on the FRONT panel, not beginign to consider what's behind the "menu" shifts, which number considerably more since a lot of them perform multiple functions. And that's only the FRONT panel. No wonder you're so farrrrr out in left field. You need a fieldglass to even recognize the subject, much less any detail thereof.

As noted previously, the most clueless novice (small n) has you bested buy a bunch. But regardless, you just troll on and on and on.
It's hardly surprising when some swimmer tires of it and bregins to stick firecrackers up your nose.

Wheeeeoooowieee. You'd best wake up and smell the coffee. The welfare folks have big budget cuts in staffing - guess what happens when errors are made? When you don't have enough budget for investigation, well ... dang! I am missing the fact that you might need an IQ over the modest two-digit range to figure that out. Well, I shouldn't flame, but you should be realistic and figure a few things out on your own. Without reasonable budgets for investigations (not just figuring out who or what should go where in the electromagnetic spectrum), don't expect enforcement. Cut more income and corporate taxes and enable companies to report more income than they make (since they won't get whacked too badly with taxes). Then let the stock run up a bit, forbid your employees to dump the stock, then dump your stock and run. Enron and many others. Heck, you'd get more time getting caught robbing a bank of $1000.00 than some executives cleaning out pensions and running off with hundreds of millions of dollars.

I hope you do not think I was being critical, Phil. The point I was trying to
make is simply that if we want enforcement we have to ask for it in the
appropriate way. Complaining to each other doesn't get the FCC's attention.

The proposed new rules - actually lack of rules - on media conglomerates are one example. Philly Inquirer had a pretty good story on it. PLC? Another scary thought.

"Bricks without straw" isn't exactly a new idea. And the White House wants a big tax cut, while many states are going in the red....

I blame Jim Kehler's uncivil behavior squarely on Jim Kehler.

Kehler isn't absent from the world. He has a website. He is still criticizing folks for not thinking like he does. You are starting to sound like what KH2D calls "brain-dead old farts."

>Perhaps it would be interesting to go back to his posts on this day, say, six >or seven years ago and see how much or how little things have changed....

Go back to your home, Jimmie. Past messages are your thing.

Live with them, roll around in them, eat them all up and spit out the ones you think will vindicate your immature behavior over losing message points. Tsk, tsk, tsk.

Wanta bet? All you're licensed to do is FRS,MURS and CB.Which is
nowheresville. Like you said, volume squelch and PTT.

>
>
> Tsk, tsk, tsk...you've never been in a modern electronics lab, have
> you?

As a matter of fact, I've spent a good bit of time in more than one, going
back to the late 50's. But pray tell what does that have to do with ham radio
and hams? You just HAD to shift to something "professional" to cover your
short tail, er shortcomings again, did ya?

> You've never operated a DSO or a synthesized RF generator,
> both used to test out radios.

Oh, I could find one to describe on the net just as easily as you could, Putzie.
Only *I* know they're out of place on a HAM RADIO newsgroup.
I sometimes wonder what your ISP might do if a bunch of us complained about
your trolling and spamming this NG. By every measure you're no more than a
troublemaking horses ass of the first magnitude. ISP's generally don't like to
condone such activity. Maybe that'd be something that needs looking in to.

> Poor baby...a little transceiver box
> with ONLY 65 controls...tsk, tsk, tsk.

That does beat volume, squelch and PTT by a bit, doesn't it? And without resorting
to
some professional electronics shop's test gear, too. My, my!

I'm not the guy attempting to have the FCC adopt a minimum age for
amateur radio licensing. I'm not the fellow who claims himself a
self-appointed advocate for the removal of morse code testing in a radio
service in which he is not involved in any way. :-)

Making radio contacts through the night doesn't deface public property
nor does it harm others. There is no requirement for socializing to be
done according to your peculiar whims.

I stated it because it happens to be true. Don't discount something
just because your knowledge base isn't complete.

> Making those radio contacts is not the only thing an emergency requires.

> Contesting could only cover a fraction of the skills required in a > real emergency.

You haven't even defined a real emergency or described what you believe
amateur radio's role in an emergency to be. Good contesters send and
receive information clearly and accurately at speed regardless of mode.

Hams are not emergency medical technicians. Radio amateurs provide
communications. Don't give me gobbledy-gook about setting up a station
or putting up an antenna. You aren't much of a ham if you can't set up
a station and put up an antenna. Contesters regularly do those things.

Nope. I'm not licensed in any of those three radio services.

No license required in them...with one exception. Which one
is it, Vacuous?

>> Tsk, tsk, tsk...you've never been in a modern electronics lab, have
>> you?
>
> As a matter of fact, I've spent a good bit of time in more than one, going
>back to the late 50's.

Yes, in an electrician's cubbyhole with a Simpson 260 being
your most complicated test instrument...1950s to the 2000s.

What's a DSO? Define it. Anything like an LSO?

>But pray tell what does that have to do with ham radio and hams?

You brought up the PhD-like mental superiority of knowing all
about 65 knobs, switches, and push-buttons on a 765. :-)

Gosh! That's so terribly IMPRESSIVE! :-) :-) :-)

Ever get your VCR to quit blinking "12:00" ? :-)

>You just HAD to shift to something "professional" to cover your
>short tail, er shortcomings again, did ya?

I've been a professional in electronics for over half a century.

No shortcomings at the bank as a result of that.

>> You've never operated a DSO or a synthesized RF generator,
>> both used to test out radios.
>
>Oh, I could find one to describe on the net just as easily as you could,
>Putzie.

Ah, but I've OPERATED them, Vacuous. Also TDRs, slab lines,
slotted lines, vector voltmeters, spectrum analyzers, many kinds
of oscilloscopes, noise sources, RF generators of many kinds,
Arbitrary Waveform Generators, BER Anayzers, VSWR meters,
Power meters, and minicomputers (used with the first H-P

network analyzers, model HP-2116), plus all sorts of specialized
test equipment. Nearly ALL of the newer test equipment has
embedded microcontrollers with "menu" selection through a
shuttle...HP, Tektronix, LeKroy, Bruel & Kjaer, Anritsu, etc.

Everyone who uses such things learns to use them correctly,
don't get any fancy certificates or awards for such mental-giant
tasks as using all 65 buttons for a ham QSO! :-)

>Only *I* know they're out of place on a HAM RADIO newsgroup.

Well, there you go... :-)

>I sometimes wonder what your ISP might do if a bunch of us complained about
>your trolling and spamming this NG.

Go ahead and complain, senior. America On Line is my ISP.

Complain to the newsgroup moderator, have him/her lock out
my access.

No problem with me. :-)

>By every measure you're no more than a
>troublemaking horses ass of the first magnitude.

I take it you don't like my opinions? :-)

>ISP's generally don't like to condone such activity.

AOL didn't like the "Never Trust Lennie" home page. Had it
axed after being notified.

>Maybe that'd be something that needs looking in to.

Maybe you ought to look in the yellow pages for some
good mental therapist?

>> Poor baby...a little transceiver box
>> with ONLY 65 controls...tsk, tsk, tsk.
>
>That does beat volume, squelch and PTT by a bit, doesn't it? And without
>resorting to some professional electronics shop's test gear, too. My, my!

So, you use ALL 65 controls in a single QSO? :-)

Wowee! You must be the Mensa Master of all time...

> Get it all out, you'll feel better. Shame you can't actually come up with a
>retort.

A retort is a piece of glassware in a chemical lab. Do you need
one of those to analyze? What kind of substance are you
analyzing? :-)

>> Ever get that outboard DSP unit working yet?
>
> Problem was, it *was* working, just so poorly it it was a big disappointment.

Tsk, tsk, tsk. Did it have more than 65 controls?

>I'd heard those things were supposed to be of some benefit.

They usually are...if operated properly. Of course, with less than
65 controls to play with, you may not have learned the proper
settings?

>Guess that's what one gets from listening to dingalings like you!

I never recommended anything to you.

Were you forced to get one by threats?

Or were you seduced by the Dark side of the Force, Dart?

>It found a new home long ago.

Awwww...that's sweet.

Have you found a good retirement home yet?

Why are you so worried about that subject, senior?

>I'm not the fellow who claims himself a
>self-appointed advocate for the removal of morse code testing in a radio
>service in which he is not involved in any way.

Tsk, tsk, tsk...better talk to the FCC then...they don't "work"
ham radio, don't need ham licenses, aren't required to get
ham licenses...and aren't required to be morsemen, either.

Come to think of it, the FCC said about 13 years ago that it
didn't think a morse code test served its purpose of determining
whether or not an examinee should be licensed. But, what does
the FCC know? They just regulate all of US civil radio.

On the other hand, Dave Heil thinks the morse test should
remain because he IS ham radio. HE is the lawgiver!

Ok, let's all give old Dave our support...or a supporter...
because he IS INVOLVED 24/7!

Up until now this little twerp's just been a game.

He's so pitiful I don't even know if I have the heart to keep after him.
He's such a loser all by himself. This has to have been about the silliest
display of childish playground ranting I ahve ever seen from a "man" of his
years.

Too bad for you, Lennie. I got a DD214 AND a Certificate of Honorable Discharge (suitable for framing) all on the same day.

By the way, after I complete 2 more years of federal service, I STILL get to draw my federal pension.

Sucks, huh Lennie?

"Beaurocracy", Lennie?

You got a seperation in your DD214 because you were not yet Honorably Discharged. That happened in 1960.

It's the same today for anyone who is released (under Honorable conditions) with less than 6 years of Active service.

Too lazy to put that "in" in the word "building"...?!?!

Contesting IS useful for sharpening those skills. It requires the
operator to be attentive copy the exchanges accurately under pressure.

>Making those radio contacts is not the only thing an emergency requires.
>Contesting could only cover a fraction of the skills required in a real
>emergency.

How would YOU know? I don't see KB1HMW in any contest results in QST or
CQ.

That tells me ZERO EXPERIENCE.

On the otherhand you may go to the results of the 2000 Sweepstakes and
find K4YZ in both phone and CW results with clean sweeps.

> equipment all the way from conceptual ideas on paper through all
> the required details of circuit and component selection, assembly,
> alignment, testing of everything to more and tighter regulations
> than is found in amateur radio....(SNIP)

And it eats at you that we are not the least bit impressed with you, huh?

>"Wide range of frequencies?" US amateur radio is LIMITED to
> certain bands above 1.6 MHz.

Those "certain bands" represent a sampling of all aspects of the
electromagnetic spectrum from MF to daylight. No other radio service offers
that. None.

>US amateur radio constrains
> itself primarily to just the HF bands where the olde-tymers hang
> out playing contest games and hanging out with their olde-tymer
> buddies.

OH?

YOU are the one who claims that the No Code Technician has "saved" Amateur Radio, yet in making such a claim, you can NOT claim that "US amateur radio contrains itself >>primarily<< (my emphasis) to jsut the HF bands"...(SNIP).

This would mean that all those NCT are NOT active on 30Mhz and above. I can most assuredly state that the bands are QUITE alive above 30Mhz!

>US amateur radio MAY be granted a "new" HF band near 5 MHz
> and one small slice of a band at LF in the future. That's not yet
> accomplished.

YOU "may" be granted an Amateur Radio license in the future too, Lennie. So what?

>>You, on the other hand, are
>>relegated to nonstop reminiscing on your 50 year old military duties during
>>which you baby-sat some less-than-interesting routine circuits on a few
>>discrete frequencies.
>
> "Nonstop reminiscing?"

Exactly. I am sooooooooo tired of your chastising others about "living in the past" and being allegedly "mired in the traditions of the 30's" by you, only to have you lapse into yet another rant about your rear-area radio clerk days in Japan and how SINCGARS saved the military community from certain doom.

What a putz.

>"Baby-sitting?" Each operating team at ADA was responsible
> for the continuing operation of 36 (at first) to 43 transmitters ranging
> from 1 KW to 40 KW in power output at HF operating 24/7, using
> a two square mile antenna "farm."

See what I mean...?!?!

>"Less than interesting routine circuits?" The whole purpose of
> the 24/7 worldwide communications network of the US Army and
> other branches in the 1950s was to make communications as
> reliable as possible...(SNIP)

Which it was even without your help. Wonder how THAT happened...?!?!

>At ADA we got to learn a few details of that behind the scenes,
> so to speak while monitoring circuits for operation (required to
> insure reliability). We got bits and pieces of information as it was
> communicated. Not a great deal of it...too many circuits to keep
> a constant check of everything.

So in otherwords you were reading traffic that was NOT addressesd to you...

>"A few discrete frequencies?" ADA, like all large military
> transmitter stations then, had a large choice of frequencies, all
> of them crystal controlled. There were about 150 separate quartz
> crystals in a floor-standing tall cabinet with warming lamps inside

> for all the non-SSB transmitter exciters.

And now all YOU have to do is snip a diode in a CB PLL and have just as
many frequencies available to you, Lennie...And I doubt you'll ever have more
than that...

>Did I mention the USAF HF station at Funabashi?

Is it pertinent to Amateur Radio policy?

No?

Then you probably HAVE "mentioned" it.

>I was my own employer for one of my licensed radios. :-)
> Directed myself.

The blind leading the blind.

>I could talk about some CB activity and having all 23 channels
> under crystal control before there was ready-build CB gear to
> do that...but I doubt you call CB as "real radio."

Oooooo-eeeeeeeee, Lennie! Yo ganged together a rotary switch and a box
full of crystals! ! !

How impressive!

>Only when I drive down to Mexico and drink the water.

Or open your newsbrowser and begin yet another RRAP rant cycle.

>I'll call any skilled morseman my superior BUT ONLY IN
> morsemanship. No other skill, Dickie, except mean-spirited
> name calling which you sporadically show as your masterwork in
> here. I'll acknowledge you as my superior in mean-spiritdness.

Oh, Lennie..don't shy away! Yo are so prolific at those very skills, and
you manifest them almost every day right here! Don't be bashful now!

>Somebody in here used the quote, "it ain't bragging if ya done it."
> I've done what I say I done, Dickie, have the proof.

Which, if we accept that at face value, means you have ZERO experience in
AMATEUR Radio...which we already knew...So what???

Its a good example of an illegal activity.

You surely do like to insult Hams, donchya?

One could make the argument that even though these gangs are indeed
engaging in social activity, if only with each other.

But let's operate on your premise. What specifically is socializing? Is
it hobnobbing with the hoipolli? Is it the "popular" kids in high school
sort of thing? Is it popular culture?

Fact is, hams getting together to hang out with each other, in person
or on the air, is indeed socializing. It is enjoyable to the
participants, and harms no one.

Whereas your comparing hams to gangs who ehgage in vandalism is just
another proof of your deep seated antagonism for Amateur Radio.

> Making radio contacts through the night at a vacation spot, while others are
> socializing is another <group supported> anti-social activity.

I know many people(mostly women), socially well adjusted and "normal",
who during vacation, will sit on the beach under an umbrella and read a
book. A large part of their vacation is taken up this way. They enjoy it
very much, and find it relaxing. They come back from their vaction
refreshed.

Are they anti-social also? Let's make a real good example:

We have the above mentioned woman reading her book on the beach. Beside
her sits her husband, using his HT to talk to some Ham in Europe via an
Echolink repeater.

What's the difference?

I think Len lives for one liner insults. That's probably as much of a
single thought that his brain can handle. Anything else would be too
complicated.

Kevin, WB5RUE
If two people agree on everything then one of them is not thinking.
If two people disagree on everything then one of them is not trying.

1069. Re: ARS License Numbers

Newsgroup: rec.radio.amateur.policy
Date: 2003-05-15 16:05:58 UTC
From: N2EY@AOL.COM
Message-ID: <c2356669.0305150805.2343b1fe@posting.google.com>
Source record: 67320

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of May 14, 2003:

Novice - 34,564 (decrease of 14,765)
Technician - 254,786 (increase of 49,392)
Technician Plus - 68,978 (decrease of 59,882)
General - 140,997 (increase of 28,320)
Advanced - 83,599 (decrease of 16,183)
Extra - 103,995 (increase of 25,245)
Total - 686,919 (increase of 12,127)

For historical comparison, as of May 14, 2002:

Novice - 38,344 (decrease of 10,985)
Technician - 240,510 (increase of 35,116)
Technician Plus - 79,744 (decrease of 49,116)
General - 139,023 (increase of 26,346)
Advanced - 85,556 (decrease of 14,226)

I'm glad you guys don't do public service. I think emergency comms should be
like Pay Toilets and "volunteer" ambulance groups.
You call on radio geeks for help, you get help and a $5000 bill in the mail
to cover the callout.

This is from ARRL bulletin just received. (ARLB035)

Dan/W4NTI

The granting of just five spot frequencies--5332, 5348, 5368, 5373, and 5405 kHz--at 60 meters was less of a surprise given opposition expressed last fall by the National Telecommunications and Information Administration (NTIA). The NTIA had cited a possible need for the requested band by federal government users and proposed the five specific frequencies for amateur use on a secondary basis. The FCC has granted operation on USB (2K8J3E emission) only, with a maximum effective radiated power limit of 50 W relative to a 0 dB gain antenna--a half-wave dipole. The channels--each with a maximum permissible bandwidth of 2.8 kHz--will be available to General and higher class licensees.

''While the new amateur privileges at 5 MHz are not as flexible as we had hoped, we recognize that much has changed since the ARRL petition for rulemaking was submitted to the FCC in the summer of 2001,'' Sumner said. ''Federal agencies with homeland security responsibilities have renewed interest in HF radiocommunication.''

How is the question "loaded"? Here it is, again:

"Does your employment somehow prove that you know more about how
AMATEUR radio should be regulated than anyone else?"

You rambled on for 8 paragraphs about your work experience but not one
word on how that non-amateur work experience means you know more about
how amateur radio should be regulated than anyone else.
>
> That really isn't the point, is it? :-)

Nope.

The point is that you keep bringing up all sorts of non-amateur-radio
work experience as some sort of proof or evidence that your arguments
are correct. At the same time, you deny the relevance of anyone else's
experience or education, if that person disagrees with you.
>
> >You avoid answering that question, for some reason.

Mister Anon is incorrect. The money is misdirected into
projects like Spectrum Auctions, Powerline Internet, Wireline
Competition, and Media Conglomeration studies, not into field
enforcement.

The Congress and The Eighth Floor both wish that the field
enforcement obligation and functioning would vanish overnight.

>The single greatest problem in the commission today in a

What you are hearing is likely the "Eastern Regional
Patriot Net". It's a net with past ties to Militia
political movements in Kentucky and Michigan.
Curiously also, this Net was started by noneother
than ex-AA8DP, Steve Anderson of
United Patriot Radio fame! He started it in 99 or
00 when he was booted off of the 3.950 Liberty
Net for being far too much of a loose-cannon.
(imagine that!) Later he was cited by k4zdh and
responded with a rambling and somewhat incoherent
diatribe about the FCC and R.H. were both "..foreign agents
of the United Nations and/or the British Admiralty Reagent".
(whatever the heck that is?) He even went so far as
to confront k4zdh on the air one evening, live on 3.860
of which I have a tape of the entire event. It is without doubt
a rare ham radio classic. It proved beyond any doubt (..and much
longer before Anderson's legal troubles with the KY State PD!)
that AA8DP was not only 2-bricks-short-of-a-full-load, in fact
he was balancing them red-clay bricks atop his tinfoil hat whilst he
was ascending the ladder to his roof to feed the pigeons..so to speak !

Shortly after his encounter with Hollingsworth, Col. Steve checked
ino the ERPN one night and relinquished his FCC license, with much
pomp, and fanfare, and farting, and bluster and paranoid rantings,
never to be heard of on 75 Meters - ever again....
How sad, cry me a river full of crocodile tears Stevie!

(Anderson later used his "now HF/Tx modified" Kenwood ham
radio rig as the primary transmitter for United Patriot Radio.
This actual piece of "radio history" is now rumored to be
residing in the FCC's glass "Trophy Case" in either Washington DC
or Gettysburg Pa) I bet a dozen Dunkin Doghnutz that if they ever
put Steve's UPR HF rig up on e-Bay, with the original FCC Evidence

Tags still attached, it would likely fetch 3 Grand before the auction
was over !

Steve is currently serving time in the Federal lockup and nuthouse
allegedly for acute manic depression and schizophrenia, besides
several other charges stemming from his much publicized
"lam-from-the-law". His ham radio legacy however still lives
on in the ERPN Net, which sadly for we SWL's, is now
a mere shell of it's former colorful self when "Ole Dr Pepper"
was a regular check-in.

It is also of note to SWL's is that one of Steve's
cohorts in the Ky. Militia used to check into the ERPN
using the callsign of 'Wolfman Jack'. Another station, now
also gone, used the callsign of 'Orange Blossom' and was
FCC DF'ed to be in the area of Central Michigan.
(both of these pirate tations have now vanished from HF)

Other stations were alleged to have established daytime
"nets" on one or two frequencies located in-between the
10 Meter Amateur and 11 Meter CB Band(s). The freqs
were once listed on a now-defunct militia Website
as a daytime watch freq.

Finally, keep an ear up on 75 Meters, especially if activity of
patriot groups on the more-popular domestic short-wave
call in talk-radio shows start to become more active.

It has been the trend in past times, that when the "paranoia level"
on the few "patriot type" short-wave broadcast station circuits
starts to heat up, that there is also a *notable increase* in transmitted
activity by those affiliated individuals who have access to ham gear
and operate on the 75 Meter ham band, and elsewhere outside
the ham bands, this regardless if they have legitimate callsigns
and/or are clandestine stations using bogus calls and identifiers.

IIRC, the events were charity based events such as walkathons, races, etc in which the proceeds went to help people who were ill or crippled. I do March of Dimes, Habitat for Humanity, MS bike races and more every year.

If we took payment for our services, that would take money away from helping these people. We are volunteers and donate our time to help people who are less fortunate than us.

That is about as public service as you can get. If you don't want to do it, okay. But its hard to understand being proud of that.

And was the traffic so low-level that it wasn't encrypted?
RTTY cryptos did exist in those days, albeit rather crude by
today's standards......

When I reclaimed my original 1952 call sign the first day that
the "vanity" (how I hate that term) program started, I too gave
up an "original" 1x2 [N6SP]. My only regret was that a club
that I am trustee for got aced out of getting that call by
another club....

Accurate points Phil. In fact it would not suprise me
in the least if you see in the near term the "farming out"
of several aspects of Field Enforcement to private
contractors. It also would not suprise me to hear someday
that some other aspects of the FCC be placed under the
control of the Office of Homeland Security. Had a lengthy
conversation with our Senator last week, he said the buzz-
word on Capitol Hill right now is "Privatization". You will
NOT be seeing Social Security privatized ANYTIME soon
as it would be political suicide, but much of everything
else, including many FCC aspects, are indeed On the Table.

Congress is afraid to raise taxes so they now in the process
of farming out as much work to Independent Contractors
so things it will: "...appear balanced and in budget on the
OMB books and other such works of fiction".

(that last quote was from my Senator !!!)

Ham radio does not lead to aging. Time alone does that.

The general US population as a whole gets overweight with age independent of their hobbies.

An interest in radio direction finding would not prevent anyone from becoming overweight. Even active participation in radio direction finding would not do so. For one thing, the normal person could not devote enough time to it (on foot or bicycle) to have any beneficial effect since it is not needed on any regular basis. For it to be effective, one must exercise a minimum of three days a week. There just isn't that much need for direction finding. Plus a lot of it could be done in a car.

An interest in electronics would have no preventative value in weight gain. It is basically a sedentary activity plus one can eat while doing electronics. Therefore making the situation even worse.

By the way, I looked out over our club from the officer's table last night. About 1/2 the members are on the slim side. This is much better than the general population that I see in the malls, etc.

Because it's not. Requiring somebody to acquire skills like
manipulating a Kleinschmidt makes absolutely the same amount of sense as
requiring them to show proficiency at CW.

And people wonder why amateur radio has an ugly reputation. If I
were interested in code, I'd learn it. I'm not. If I operated HF, I'd do it
in digital modes, because that's what interests me and where my professional
communications skills lie.

Well, if I had an old Baudot paper tape punch laying around, I'd
probably put it to use just for fun, but I see no point, or future, in
REQUIRING people to learn obsolete skills like typing on old vertical-key
Kleinschmidts, actually _using_ paper tape, or diddling about with CW keys.
You like it, fine. Have fun. If I owned old teletype gear like I used to
operate, like I said, I'd probably play with it, too. But requiring it, (or,
supposing it had been required), desiring the requirement to be maintained,
doesn't make logical sense. Far better to take that ridiculously easy
Technician test and double the size and difficulty of it. Putting time in
studying electronics and procedure would be a far better indicator of
somebody's seriousness about the hobby than CW testing.

What - like every day? If you want to keep your weight down, you need
more excercise than a fox hunt.

and ummm..... maybe just maybe..... people can have more than one
hobby!!! I sit on my kiester when I'm contesting. Other times, I'm
hiking, playing Ice hockey, and sleeping for maybe 4 hours a day.

Ham radio is not to blame for obesity.

If you want to troll us, you have to do better than that.

>Oh, I get it now! Those electrons don't weigh very much. Electronics
>is the secret to weight control!

Proper behavior and meditation leads to weight loss is some diets.

Focus on contesting and random contacts, antenna setups require less physical activity. The idle activity that follows, making random contacts, takes little activity.

Furthermore, these activities lead to "celebrating" afterwards with food. Often, the food is not healthy.

Many Hams that attend Hamfest are very overweight. I have not seen this in other types of events I have been to.

1096. Off to Dayton

Just more bluff and blustery BS from the Meistroll. I doubt even he is stupid enough to actually file such
a frivolous lawsuit, given the facts and his extensive posting record of longtime numerous effort to
agitate and annoy hams who posting on a ham radio newsgroup, when he is not a ham and clearly -both by his
own words and clearly evident results has no interest in ham radio beyond the trouble he can stir by
agitating others to anger here. Surely he's not so stupid that he doesn't know of the punitive costs placed
on deliberately agitating others to anger then trying to sue them for that which you yourself caused. If
not it's time he found out the hard way.

Yes - group-supported, anti-social activity.

>Fact is, hams getting together to hang out with each other, in person
>or on the air, is indeed socializing.

True. They are socializing in a group, in an anti-social way.

>Whereas your comparing hams to gangs who ehgage in vandalism is just
>another proof of your deep seated antagonism for Amateur Radio.

No, I was just giving another example of group-supported, anti-social activity.

>We have the above mentioned woman reading her book on the beach. Beside
>her sits her husband, using his HT to talk to some Ham in Europe via an
>Echolink repeater.
>

The woman must be a Ham if her husband is a Ham. Therefore she is probably
anti-social also.

If she is not a Ham, she is reading a book to pass time, while her husband
talks on the HT. In another situation, she may have asked her husband why he is
always on the radio.

However, in the situation you mentioned, neither is being anti-social.

> Yes - group-supported, anti-social activity.

Vipul, I do hope you realize that folks are having a laugh at your
expense.

> >Fact is, hams getting together to hang out with each other, in person
> >or on the air, is indeed socializing.
>
> True. They are socializing in a group, in an anti-social way.

You mean sort of like a political party's convention?

> >Whereas your comparing hams to gangs who ehgage in vandalism is just
> >another proof of your deep seated antagonism for Amateur Radio.
>
> No, I was just giving another example of group-supported, anti-social activity.

You can't give "another" example until you first give an example. You
haven't come up with one yet.

> >We have the above mentioned woman reading her book on the beach. Beside
> >her sits her husband, using his HT to talk to some Ham in Europe via an
> >Echolink repeater.
> >
>
> The woman must be a Ham if her husband is a Ham.

There's a piece of faulty logic.

> Therefore she is probably
> anti-social also.

...and there's another piece of faulty logic.

> If she is not a Ham, she is reading a book to pass time, while her husband
> talks on the HT.

Maybe her husband is using the HT to pass the time while his wife is
finishing her book.

> In another situation, she may have asked her husband why he is
> always on the radio.

...or he may have asked her why she is always reading a book. She might have read her book and he might have used the HT without saying a word to each other.

> However, in the situation you mentioned, neither is being anti-social.

The same applies to your illustrations. Despite your desire to make it so, nobody is being anti-social.

Vipul, are you an adult?

Just what is "proper behavior", Dr. Shah? I can understand how
meditation can lead to weight loss. The same thing can be true of radio
contesting. One gets so involved in either that one forgets to eat.

> Focus on contesting and random contacts, antenna setups require less > physical activity.

Oh! So random contacts have more calories than scheduled contacts?
I don't know how you do antenna setups but you're welcome to hike up and
down my 70 footer a few times. We'll check your opinion afterward.

The idle activity that follows, making random contacts, takes little
> activity.

Do you ever watch TV? Read a book?

> Furthermore, these activities lead to "celebrating" afterwards with > food.

I don't celebrate Id El Fitr, Diwali or antenna work.

> Often, the food is not healthy.

How often?

> Many Hams that attend Hamfest are very overweight.

You mean many hams attending the four hamfests in New England?

> I have not seen this in other types of events I have been to.

Try a tractor pull or a professional wrestling match. Visit a Wal-Mart
store.

I'm only senior to you in experience in amateur radio. Chronologically, you are senior. In amateur radio, you'd be junior or a neophyte but only after taking the first step and actually obtaining a license. Take your pick. The subject concerns me because I don't want to see youngsters excluded from amateur radio. It doesn't appear that the FCC supports your view.

> >I'm not the fellow who claims himself a

> ham licenses...and aren't required to be morsemen, either.

Tsk, tsk, tsk. Poor baby. You don't work for the FCC and don't regulate amateur radio. As a non-participant, you are irrelevant to amateur radio. As you well know, it is the FCC's job to regulate. One doesn't need to have a driving license to work at the DMV, doesn't need to fly an airplane to be an air traffic controller, doesn't need to be a fisherman to sell fishing rods. If, on the other hand, you'd like to drive a car, you'd need a driver's license. If you'd like to fly an airplane, you'd need a pilot's license. If you'd like to go fishing, you'll need a fishing license.

> Come to think of it, the FCC said about 13 years ago that it
> didn't think a morse code test served its purpose of determining
> whether or not an examinee should be licensed. But, what does
> the FCC know? They just regulate all of US civil radio.

Yes the Commission regulates amateur radio. You do not. The FCC staff is paid to regulate amateur radio. You are not. Try to keep those things in your mind. The morse issue is all but gone. Sorry you don't like it that it hasn't gone away but you do not regulate amateur radio.

The FCC will tell you when.

> On the other hand, Dave Heil thinks the morse test should
> remain because he IS ham radio. HE is the lawgiver!

I've been an active ham for forty years. You aren't involved in any capacity. Can you explain how your professional electronics career provided you with knowledge about how amateur radio should be regulated? How about explaining why we or the FCC should support your views? I am not amateur radio but I am a radio amateur. Like yourself, I've had a career in professional radio/communications/electronics but I don't claim that it provided me additional informaton on the regulation of the amateur radio service.

> Ok, let's all give old Dave our support...or a supporter...
> because he IS INVOLVED 24/7!

Nobody does anything much except breathe 24/7. Yes, I am involved in amateur radio. You, on the other hand, are not. You are not a participant. You are not a regulator. You are an onlooker.

Errr, in case you are not aware, this is not a court of law,
with the necessity of proving something. However, if you are
a motivated citizen, pick up the LL and call your local
congressperson's office. And please don't make a typical
ass of yourself by demanding to speak directly to the
congressperson. You ask for a staffer and tell the nice lady
answering the phone that your request is no rush, just some
info you want. The kids who are staffers in these offices are
smart, focused, and eager to help. And it is amazing what
info they can get their hands on! We learned things about the
FCC that the FCC does not want made public, especially in
the budget area.

>contractors.

Consider that in the past 15 years the following FCC functions
were "privatized" i.e. "farmed out" to the private sector:

Frequency coordination in almost all services
Amateur license examinations
Amateur-to-amateur interference resolution
Commercial license examinations
Ship radio safety inspections
Broadcast station compliance inspections
Land-mobile interference resolution

>It also would not suprise me to hear someday
>that some other aspects of the FCC be placed under the
>control of the Office of Homeland Security.

If that Office was run right, this would not be a bad thing.
It would give some muscle to the enforcement and investigative
functions that are currently held back by Congressional and
industry restraints on the FCC whom they see only as a license
awarding entity.

For decades I have been an advocate of separating the
license-issuing functions and the enforcement functions into
two separate agencies with separate funding, as is done in
Canada. The good analogy in the US is the Motor Vehicle
department(s) who grant the licenses and the Highway Patrol(s)
who enforce the laws.

However, I hear that the "Homeland Security" folks are as
rigidly controlled by Washington politicos as the FBI was under
Mister Hoover, and adding layers of top-heavy bureaucracy is
not what an effective law enforcement agency needs.

So when do we get to use them? Now?

To get our USB signal centered we'd need to dial
our rigs to 5330.6, 5346.6, 5366.6, 5371.6, and
5403.6 KHz That's (freq) -(2.8/2).

>Good, because it's worthless.

Worthless in spades.

>> What you are attempting to prove in here is that any commercial radio
>> license test is inferior to any amateur radio license test.
>
>Not at all. Just that you have no basis for comparison since you have
>never taken any amateur radio license test.

This is part of his rant. Lennie thinks he's already done it all and
knows it all...he sholdn't "have" to take ANY Amateur exam "just because"....

>> What you are implying is that "tests" represent a summation of
>> knowledge of the examinee AFTER the test was taken.
>
>Nope. Not at all. The tests are the entry point only. Minimum
>qualifications, that sort of thing.
>
>> That is most
>> assuredly false, ludicrous, and a bit insane.
>
>Then why do you make such a big deal about your First 'Phone?

"Do As I Say, Not Do As I Do" Some call it "two-faced".

>> Absolutely NO "test" is required to see the arrogance and self-
>> righteous indignation of certain individuals who insist that Their
>> testing in anything showed their "superiority" to any who did not
>> take the test. Their "superiority" is a definite NO SALE.
>
>Let's see - who wrote:
>
>"That license grant proved I took a tougher test than any amateur
>radio test at an FCC Field Office at a time when there was no
>deliberate public information on any answers."
>
>in an attempt to prove "superiority"? Ah - that would be you, Len.

OUCH! Nice job, Jim!

>> I'm in an arena of amateur radio policy arguments where the
>> standards and practices of 1930s amateur radio represents the
>> norm for the 2000s according to some olde-tyme hams.
>
>What are you talking about? Was there no use of Morse code after 1940?

The funny part is that we keep trying to discuss policy matters OTHER than
Morse Code, and Lennie always manages to pull it back to that. The FCC has
already dealt with it and done what it can do. Lennie refuses to accept that
this "issue" resides with them (the FCC) and not any one Amateur or
Amateur-related organization.

Everyone else has dealt with it and accepted it...Everyone EXCEPT Lennie.

>> How does your passing an AMATEUR radio test so long ago
>> prove you are judge, jury, and executioner qualified to speak
>> of policy in amateur radio TODAY? :-)

>
>"You cannot answer a question with another question" - your words,
>Len.

Sure we can, Jim! Here's one for Lennie: "How does passing a COMMERCIAL
radio test so long ago prove you are judge, jury and executioner qualified to
speak of policy in AMATEUR radio TODAY?"

Of course YOU already asked him that and he's refused to answer, so we can
add that to teh heap of questions still pending for him to answer.

>> >But the amateur radio experience of an active radio amateur DOES exceed
>the
>> >experience of any unlicensed person. In other words, us licensed, active
>hams
>> >have experience, knowledge and skills about AMATEUR RADIO that you do not,
>> >Len. That's a plain, simple fact.
>>
>> No, that's just a self-righteous, self-important CLAIM.
>
>No, it's a plain, simple fact. You don't like it because it's true.

Experience is really over-rated, Jim! Just ask Vipul and Brain!

>> YOU are just venting a cloud of frustration and
>> pique for not being able to Rule and are unrecognized for
>> the greatness and glory of your words of wisdom.
>
>Not me. I'm not frustrated about the subject at all. I've made my
>views known to the FCC on a number of issues, and will do so again.

It just amazes me how Lennie can make such outlandish claims in public and
not realize that we can see right through him!

>> What's worse, the FCC's opinion on morse code testing for
>> US amateur radio license examination is not in agreement
>> with all your claimed "superiority" in amateur radio.
>
>What ARE you going on about?

Lennie keeps claiming that you (and anyone else who enjoys CW) "claims
superiority" in Amater Radio. However I have yet to see such a claim uttered
by anyone. (other than by the anonymous "Know Code" blurbs that pop up, and who
cares about someone who can't put their name to a post?)

>> I'm not the one touting B&W products of the 1950s.
>
>No, you're touting licenses and experiences of the 1950s.

DING! Right betrween the eyes again.

>> I'm not the one demanding all amateurs to adhere to
>> the standards and practices in amateur radio as it
>> was in the 1930s.

>
>No, you're the one who denies the need for any standards or practices.

Why is it that all we suggest is that Lennie get a license initiated in
1991, yet he keeps insisting that we are adhering to some 1930's "standards"?
None of us were licensed before 1950-something, and most of us in the late
60's/early 70's.

>> I'm not the one constantly going back to dear old
>> GOOGLE to pull out old messages and try to beat
>> dead horses of past arguments.
>
>No, you're the one who wants people to forget the reputation you've
>earned for yourself, and who wants people to ignore your errors and
>self-contradictions.

I am sure Lennie goes to bed every night cursing Amateur Radio in general,
us in particular, and the egghead that created Google (and Deja before it...)

>> >> I can "take it" to the extent of having an attorney file for a civil
>> >> court lawsuit on grounds of libel. I can afford such things as
>> >> attorney fees for a protacted period. Such a lawsuit would be
>> >> almost a cakewalk since prima facie evidence of libel was
>> >> clearly evident that ANY AOL subscriber could view; there are
>> >> (and were then) millions of AOL subscribers. AOL would have
>> >> lost, without doubt. So would Robeson. In Robeson's case
>> >> such a financial loss would have been severe in both time and
>> >> money.
>> >>
>> >Sounds like you are threatening him.
>>
>> Awwww...gosh, I didn't let a "superior" ham run amuck with
>> his petty libel!

As I said...If Lennie REALLY thinks he was "libeled", he's at liberty to
file his suit. The REALITY will be that I will also present REAMS of copies of
posts from Lennie over YEARS with his wild assertions, addressing of others
with profanity in a public forum, etc etc etc, and we'll see whose "financial
loss (would) have been severe in both time and money".

I wonder how long he'd have to go back to work to make up what he might
lose in a civil suit? How long could he continue to afford to live on Lanark
Street if there was a lien against his home for court settlements?

Just his assertions of "professionalism" in communications followed by his
silly claim of a "mistake" in sending an offensive .jpeg in response to his
offer to show his "license" would get it dismissed.

I wonder how Mrs. Lennie would feel about her financial and domestic
security being surrendered to sate Lennie's ego vis-a-vis his hatred for a
"radio hobby...?!?!

Hmmmmmmmmmm...?!?!?!?!?

Not if he keeps making irresponsible comments about who he's going to sue over an AOL post due to HIS ineptitude, Dave.

Wonder how Mrs. Lennie's gonna like the idea of her husband putting the rest of their retirement security on the line over that...?!?!

Watching the live webcam feed from the
Dayton Hamvention right now at:

http://tmedlin.com/hamvention.html

Looks like it's raining at a pretty good clip
and I can see what looks like 2 or 3 buyers
at the most walking the flea market asile in
the live photo snapped just a minute ago.

Is this photographic confirmation that the
Dayton Hamvention, and hamfests in general
also, are going the way of the dinosaur?
Has e-Bay killed hamfests?
Did Wayne Green's "crystal ball" really
portent with accuracy and he got it right all along
in his editorials?

I recall Dayton as being so packed in past years
you felt like you were at the Indy-500. Now it looks
like our local junk weekend flea market pulls
more attendees. How sad. Time to stick a fork in it?

Actually, NATO specify a 1.5 kHz offset for SSB to be on their 'assigned frequency', so you should be on nominal carrier frequencies ending in .5, not .6. I agree that Part 97 makes this as clear as mud, though. A stock wide filter should give you 300 Hz to 2.7 kHz audio, so if you tune 1.5 kHz low as per NATO rules your sig should extend -1.2 kHz/+1.2 kHz, which is centred as per Part 97, and within the permitted channel by 200 Hz on both sides.

even big flea markets get emptied when it rains. if they had a picture inside it would probably be shoulder to shoulder right now. from the radar image out there it looks like they have had and will have some pretty good rain today.

Did anyone attend the unofficial forum on
Freebanding in 21st Century? Was going to attend
but had an urgent business appointment. Heard I missed
a great forum. This event was not listed on any official
programs. Word was passed on the radio and via mouth,
as well as separate flyers.

Larry

I'm surprised that he didn't go to Earthlink over my Foghorn Lenhor/RTTY wave file or the Foghorn Lenhorn jpeg. Both are parodies of Len. I may even be creative with the aircraft photo he sent you and put it up on my web site.

Now back to reliving the 1930's with the Ten-Tec Orion (which I neither designed nor built from a kit)...
